SHRA Accommodation Village, Lot 51 Kennedy Street, South Hedland

Market Context

Summary

A new accommodation project is proposed for South Hedland. It is intended to be predominantly workforce accommodation that transitions to eventual permanent accommodation, with 15 Townhouses as permanent accommodation being provided at the outset. In land use terms, this would be a mix of permanent residential and either residential building or workforce accommodation.

This short paper counts on the nature of housing provision in Port Hedland and the impact that the proposed development might have on it.

Background Information

Regarding market economics, the main relevant points to be drawn from the available data are:

- Compared with other comparable locations, there is a relatively soft sales market for houses and units.
- There is a similarly soft market for market for market rentals for standard longer term (12 months and more) leases.

An implication is there is relatively low demand for longer term (i.e. twelve months and more) accommodation. Also, rental price levels in Port Hedland and South Hedland are high compared with non-Pilbara locations. This will bring an affordability dimension for workers outside of the resources sector.

This does not mean there is no shortage of accommodation in Port Hedland. It might indicate that the right type of accommodation is in short supply.

Port Hedland has high construction costs. The market values for both new and established houses and units do not reflect those construction costs. In some cases construction cost of a potential project might exceed market value. Coupled with the ongoing risk of construction cost escalation, which recently has been substantial, the consequence is that private sector development residential projects for market sale in Port Hedland are generally not viable. New residential accommodation targeted at long term or permanent residents must therefore be backed by government or a major company, or be of a type that responds to market factors.

Port Hedland has a supply of bespoke FIFO accommodation and tourist-oriented accommodation. It is estimated there approximately 2,700 FIFO beds in FIFO villages. Of these at least 2,200 are committed to BHP and FMG, and others are likely to have long term supply contracts with major companies. Only a minority of FIFO beds (measured in the low 100s) are generally available to those that work for small business, government and the NGO sector. It is estimated there are approximately 1,200 - 1,500 total hotel tourist rooms, including in cabins at caravan parks.

Port Hedland has a high proportion of FIFO workers (approximately 29% of workers), slightly higher than Karratha. Around 56% of business / work visitors to Port Hedland (i.e. including FIFO workers)

stay for longer than 4 days. While 71% of this groups stay in bespoke FIFO accommodation villages and company owned housing, around 24% stay in tourist-oriented hotels, motels and caravan parks. Longer stay business / work visitors represent around one-third to one-half of all available hotel tourist accommodation. Over 100 longer term business visitors stay in privately rented houses and apartments. This represents around 4.5% of all private dwellings in the Town or a much higher proportion if company-owned dwellings are excluded from the total.

FIFO workers can usefully be categorised into two groups: those that are employed directly by the major companies (in this case BHP and FMG are the most prominent) and those that work for small business, government and the NGO sector. The former routinely provide accommodation directly, either in bespoke FIFO villages or in company-owned housing in the town. Organisations in the latter category typically do not provide specific accommodation but tend to rely on accommodation allowances as part of the salary package, leaving the recipient to find accommodation in the open market. It is estimated that approximately 38% of the FIFO workforce, or around 1,200 FIFO workers in Port Hedland, are in organisations that generally do not directly supply accommodation.

Impact of Kennedy Street Project

The proposed Kennedy Street development is for a mix of short stay accommodation with 252 rooms and 15 three bedroom town houses for long term /permanent residents. This will have a significant impact on accommodation supply in Port Hedland generally.

- It will reduce pressure on private sector houses and units. Some or all of the 100 or so houses and units currently routinely occupied by FIFO workers will be freed up to return to the long term residential market.
- By providing alternative accommodation for the 700 – 800 FIFO workers currently in tourist-oriented hotels, motels and caravan parks it will reduce a barrier to the expansion of the tourism industry.
- It will expand the available FIFO accommodation suitable for the approximately 1,200 workers not covered by arrangements with major resources companies. Evidence is that there is shortage of such accommodation.
- It will provide 15 townhouses suitable for permanent or long term residents. In the current market it is unlikely these would be built by the private sector in the absence of the cross-subsidy that other site uses (i.e. the short-stay accommodation) provide.
- The project is designed for transition to permanent accommodation, thus making an easy transfer when Town property economic circumstances change.

It is intended to be predominantly workforce accommodation that transitions to eventual permanent accommodation, with 15 Townhouses as permanent accommodation being provided at the outset. In land use terms, this would be a mix of permanent residential and either residential building or workforce accommodation.

The project would include a mix of short stay accommodation (248 rooms in 62 Accommodation Units, 4 rooms in 2 UAT units) and 15 town houses (3 bedroom) for long term /permanent residents, with a total of 297 bedrooms.

The intention is that this project will help provide accommodation for local service workers who do not benefit from mining salaries or are not eligible for Department of Community low cost housing, and that the workforce accommodation component will help to eventually fund permanent residential construction.

Concerns have been raised about the 'opportunity cost' to the community of providing the temporary accommodation in lieu of permanent accommodation, reflecting a perceived shortage of permanent accommodation (both rental and owner-occupied) in Port Hedland generally.

This short paper counts on the nature of housing provision in Port Hedland and the impact that the proposed development might have on it.

1.1. The Current Situation

The Town of Port Hedland is developing a Local Housing Strategy in partnership with the Pilbara Development Commission to provide a series of actions that facilitate and promote affordable and sustainable housing in the community. In previous community surveys 39 per cent of people said access to housing was 'terrible'.[1]

The Town of Port Hedland's analysis[2] indicates:

- The Town's population is forecast to grow from around 17,200 to between 21,700 and 24,150 by 2041, with a consequent requirement for an additional 2,050 dwellings, i.e. around 120 new dwelling units per annum across the period.
- However, while there have been some recent planning approvals of around this scale, building permits show a significant shortfall in residential construction activity. In 2023 the Town of Port Hedland only issued 13 residential building permits, which were mostly for single dwellings.
- The 2021 census found that 18.9 per cent of dwellings in Port Hedland were unoccupied, almost double the WA average.

[1] 2023 Markt Community Scorecard
[2] Town of Port Hedland presentation to Port Hedland Industries Council Community Industry Forum May 2024

- Relative to regional WA, there is a current deficit of 1,031 service workers in Hedland. Without intervention, this is expected to increase to 1,444 by 2031.
- Average rent across Port Hedland is $1000 a week compared to $544 across regional WA.
- Average rents have increased 20 per cent a year in Port Hedland and 36 per cent a year in South Hedland since 2020.

1.2. The Housing Market

1.2.1. Sales

Housing market data for Port Hedland and South Hedland and selected other representative suburb locations in the Pilbara, Geraldton and Perth metro area are shown in the following tables. Table 1.1 and Table 1.2 show sales data and comparative market ratios for houses. It shows that while the median sales price for properties in Port Hedland is high compared with, for example, properties in Karratha suburbs, South Hedland properties have somewhat lower median sale prices.

Table 1.1: Comparative Sales Data (March 2024 to February 2025) Houses

	Median price ($)	Available in last month (Feb 2024)	Sales past 12 months	Median time on market (days)	Buyers currently interested	Rental yield
South Hedland	479,500	90	192	76	422	10.4%
Port Hedland	789,000	21	48	106	173	9.7%
Nickol (Karratha)	620,000	21	110	59	393	10.4%
Baynton (Karratha)	715,000	25	103	68	509	10.4%
Bulgarra (Karratha)	530,000	17	67	63	435	9.6%
Rangeway (Geraldton)	280,000	21	82	36	254	8.0%
Beachlands (G'ton)	425,000	15	37	37	305	5.9%
Ellenbrook	670,000	124	501	33	2,057	5.6%

Source: realestate.com.au (5/3/25)

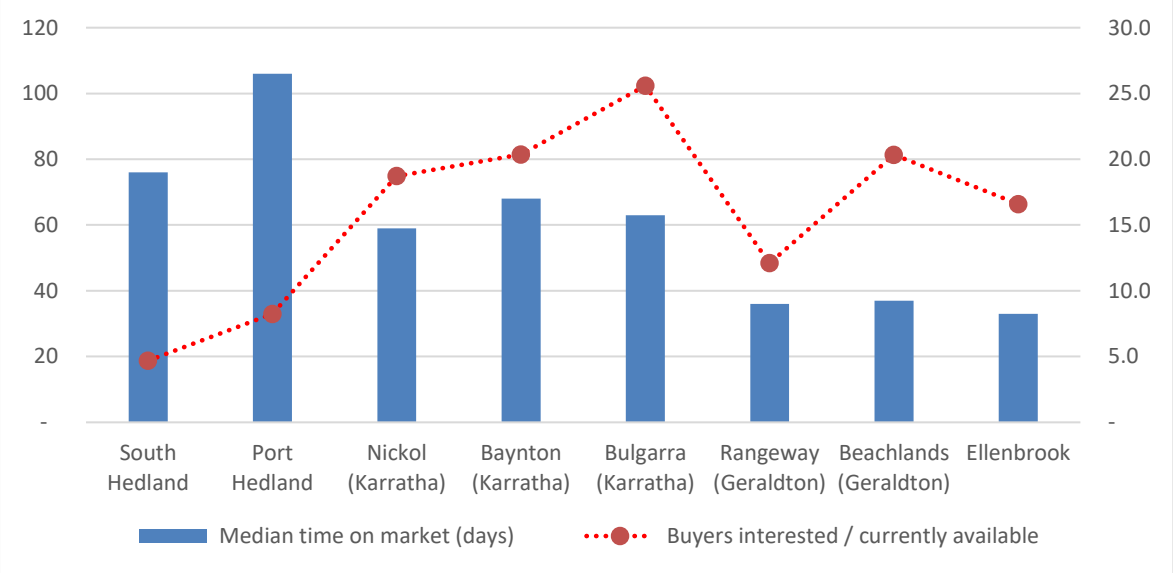
When market ratios are investigated it shows a relatively soft housing market in South Hedland and Port Hedland. At 76 and 106 days respectively properties there have a much longer time on the market than others – between 120% and 167% of the average in Karratha suburbs and two to three times longer than markets in, for example, Geraldton and Perth. Similarly, when the ratio of interested buyers for each available property is examined South Hedland and Port Hedland have much lower numbers of interested buyers per available property (4.7 and 8.2 respectively) compared with other areas, which typically average 18 - 20 per available property.

Table 2: Comparative Market Ratios – Houses

	Median time on market (days)	Average buyers interested for each property currently available
South Hedland	76	4.7
Port Hedland	106	8.2
Nickol (Karratha)	59	18.7
Baynton (Karratha)	68	20.4
Bulgarra (Karratha)	63	25.6
Rangeway (Geraldton)	36	12.1
Beachlands (Geraldton)	37	20.3
Ellenbrook	33	16.6

Source: realestate.com.au (5/3/25)

Figure 1: Comparative Market Ratios – Houses



The situation is similar for units and apartments. Table 1.3 and Table 1.4 show sales data and comparative market ratios for apartments. There are fewer comparable locations with available data, but It shows that the median sales price for properties in Port Hedland is roughly on a par with other locations.

Table 1.3: Comparative Sales Data (March 2024 to February 2025) Units and Apartments

	Median price ($)	Available in last month (Feb 2024)	Sales past 12 months	Median time on market (days)	Buyers currently interested	Rental yield
South Hedland	339,000	40	53	70	129	12.7%
Port Hedland	500,000	9	29	63	97	10.3%
Bulgarra (Karratha)	281,000	5	22	101	58	12.1%
Ellenbrook	455,000	14	60	51	211	6.4%

Source: realestate.com.au (5/3/25)

However, the market ratio data for South Hedland in Table 1.4 shows a similarly soft apartment market as noted for houses, with good availability and low numbers of potential buyers per available property.

Table 1.4: Comparative Market Ratios – Units and Apartments

	Median time on market (days)	Buyers interested / properties currently available
South Hedland	70	3.2
Port Hedland	63	10.8
Bulgarra (Karratha)	101	11.6
Ellenbrook	51	15.1

Source: realestate.com.au (5/3/25)

1.2.2. Rentals

Median rental data for houses is shown in Table 1.5. It shows Port Hedland and South Hedland house rentals roughly on par with other Pilbara locations (e.g. Karratha suburbs).

Table 1.5: Comparative Rental Data (March 2024 to February 2025) - Houses

	Median rental ($ per week)	Available in last month (Feb 2025)	Leased past 12 months	Median time on market (days)	Renters currently interested
South Hedland	825	61	401	37	153
Port Hedland	1,400	26	128	35	105
Nickol (Karratha)	1,150	8	100	32	105
Baynton (Karratha)	1,350	16	119	31	169
Bulgarra (Karratha)	615	3	71	26	53
Rangeway (Geraldton)	390	6	55	26	77
Beachlands (G'ton)	465	5	20	23	91
Ellenbrook	660	74	537	21	901

Source: realestate.com.au (5/3/25)

However, the data in Table 1.6 shows a relatively soft rental market for houses on Port Hedland and South Hedland, with time on the market at the upper end of the comparative scale (37 and 35 days compared with an average 30 days in Karratha and less in other locations). It also shows substantially fewer potential interested renters for each available property, 2.5 and 4.0 in Port Hedland and South Hedland respectively, compared with an average of 12.3 in other comparable locations.

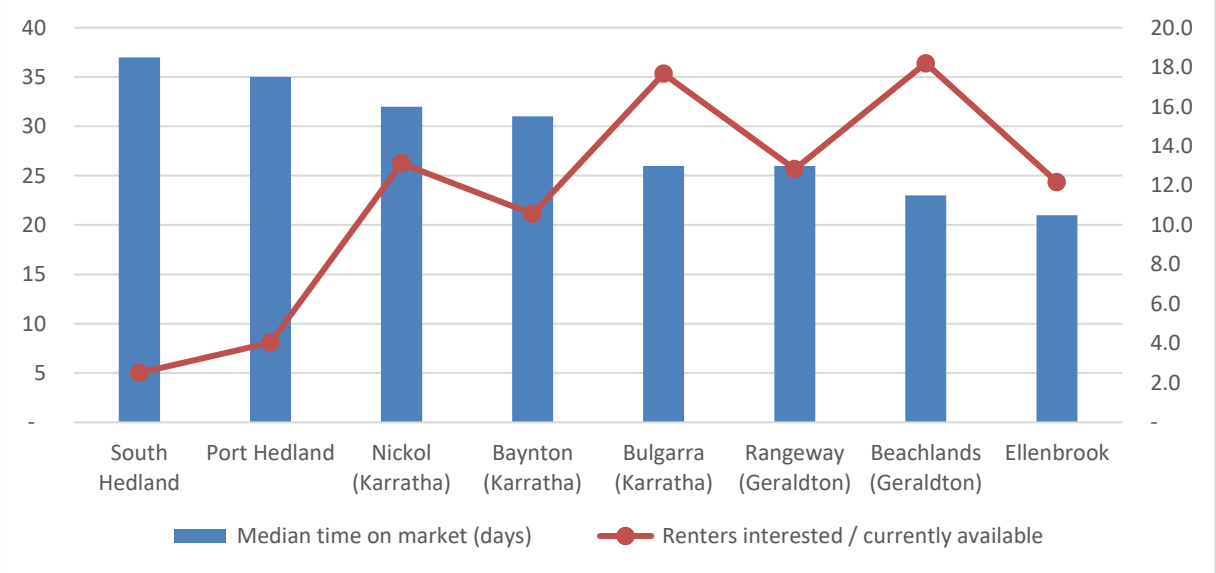
As with Karratha, rental price levels in Port Hedland and South Hedland are substantially higher than, for example, Geraldton locations.

Table 1.6: Comparative Market Ratios – House Rentals

	Median time on market (days)	Average renters interested for each property currently available
South Hedland	37	2.5
Port Hedland	35	4.0
Nickol (Karratha)	32	13.1
Baynton (Karratha)	31	10.6
Bulgarra (Karratha)	26	17.7
Rangeway (Geraldton)	26	12.8
Beachlands (Geraldton)	23	18.2
Ellenbrook	21	12.2

Source: realestate.com.au (5/3/25)

Figure 2: Comparative Market Ratios – House Rentals



Median rental data for units and apartments is shown in Table 1.7. It shows Port Hedland and South Hedland house rentals a little higher than other Pilbara locations (e.g. Karratha suburbs).

Table 1.7: Comparative Rental Data (March 2024 to February 2025) – Apartments and Units

	Median rental ($ per week)	Available in last month (Feb 2025)	Leased past 12 months	Median time on market (days)	Renters currently interested
South Hedland	700	21	175	33	65
Port Hedland	800	23	91	30	70
Bulgarra (Karratha)	615	3	71	26	53
Ellenbrook	550	2	48	19	71

Source: realestate.com.au (5/3/25)

As with house rentals, the data in Table 1.8 shows a relatively soft rental market for apartments and units for Port Hedland and South Hedland, with time on the market at the upper end of the

comparative scale (33 and 30 days compared with an average 26 days in Karratha and less in other locations). It also shows substantially fewer potential interested renters for each available property, 3.1 and 3.0 in Port Hedland and South Hedland respectively, compared with an average of 17.7 in Karratha.

Table 1.8: Comparative Market Ratios – Apartment and Unit Rentals

	Median time on market (days)	Average renters interested for each property currently available
South Hedland	33	3.1
Port Hedland	30	3.0
Bulgarra (Karratha)	26	17.7
Ellenbrook	19	35.5

Source: realestate.com.au (5/3/25)

The data indicates a somewhat softer housing market for private houses and apartments in Port Hedland than, for example, Karratha, with longer times on the market and fewer people looking for each available property. The data is consistent with the 2021 census which found that 18.9 per cent of dwellings in Port Hedland were unoccupied, almost double the WA average.

2. Factors

This does not mean there is no shortage of accommodation in Port Hedland. It might indicate that the right type of accommodation is in short supply.

2.1. Cost - Residential Construction

Part of the housing shortage can be explained by the cost of construction compared with market levels.

Residential construction costs in Port Hedland are high. As with the Pilbara generally, there is a cost premium of 60% to 100% on general construction costs in the south of the state. This means that housing that might cost $2,500 per m2 in Geraldton would be $4,000 - $5,000 per m2 in South Hedland. For a basic 150 – 200 m2 house, this would mean construction cost of around $600,000 - $800,000 per dwelling or more[3]. This does not account for land cost and is well in excess of general market levels.

Similarly, for low-rise apartments and units (including villas and town houses), construction costs in Perth are around 2,300 to 4,650[4] per m2, indicating a general cost levels of at least $3,800 up to 7,000 per m2 for basic units and apartments in Port Hedland. For a basic unit this would indicate construction costs of at least $400,000 - $800,000 per unit, against a market median of $339,000 in South Hedland, leaving no room for land component and developer costs.

Coupled with the ongoing risk of construction cost escalation, which recently has been substantial, the consequence is that private sector development residential projects for market sale in Port Hedland are generally not viable.

2.2. Accommodation Demand – Workforce Composition

While not unique to Port Hedland, the composition of the workforce might explain some of the data.

Port Hedland has a very high proportion of FIFO workers in the workforce. This can be measured by looking at place of usual residence data from the 2021 Census. This is shown in Table 2.1 below. It shows Port Hedland with 29% of the workforce based elsewhere. This is slightly higher than Karratha, which has 27% of its workforce based elsewhere. Despite long campaigns in each location to increase the proportion of local residents in the workforce, this is a long term phenomenon. This skews accommodation demand in favour of short term accommodation.

Table 2.1: Place of Usual Residence of Workforce

	Port Hedland	Karratha
Local resident	71.1%	72.5%
Other WA	22.8%	23.4%
Other Australia	6.1%	4.1%
	100.0%	**100.0%**

ABS Census 2021

[3] Anecdotal evidence indicates quoted costs for individual house construction of more than $1 million.
[4] Source: Rider Levett Bucknell and discussions with industry stakeholders

There are around 11,000 people[5] working in the Town of Port Hedland; around 3,100 of them are estimated to be FIFO workers.

FIFO workers can usefully be categorised into two groups: those that are employed directly by the major companies (in this case BHP and FMG are the most prominent) and those that work for small business, government and the NGO sector. The former routinely provide accommodation directly, either in bespoke FIFO villages or in company-owned housing in the town. Organisations in the latter category typically do not provide specific accommodation but tend to rely on accommodation allowances as part of the salary package, leaving the recipient to find accommodation in the open market.

Previous research (in Karratha)[6] provides an indication of the split likely in Port Hedland. This estimates that approximately 62% of the workforce is associated with major resource companies, indicating around 38% of the total, or around 1,200 FIFO workers in Port Hedland, are in organisations that generally do not directly supply accommodation. In 2023 there were 325 businesses employing between 1 and 19 employees in Port Hedland and a proportion of these rely on FIFO workers for some of their operations.

The research also provides an indication of demand patterns, with accommodation demand fluctuating substantially over time. While there might a be a base demand of around 3,000 FIFO beds, this can increase greatly – up to double - for periods related to, for example, maintenance shutdowns and major construction projects.

2.3. Supply – Short Stay Accommodation

Port Hedland has a supply of bespoke FIFO accommodation and tourist-oriented accommodation.

Bespoke FIFO accommodation includes:

- BHP Port Haven Village, a large accommodation facility designed to support BHP's workforce. The village has 1,202 rooms in both single and double-storey configurations.
- Club Hamilton-FMG Village is part of a mining village owned and operated by Fortescue Metals Group (FMG), providing accommodation for FMG's workforce. It features both single and two-storey accommodation blocks, with over 1,000 rooms in total.
- ESS Gateway Village, offers standard ensuite rooms with amenities such as air conditioning, flat-screen televisions, and tea and coffee making facilities.
- ESS Waypoint Village, offers 255 ensuite and air-conditioned rooms.

It is estimated there approximately 2,700 FIFO beds across these facilities. Of these at least 2,200 are committed to BHP and FMG, and others are likely to have long term supply contracts with major companies. Only a minority of FIFO beds (measured in the low 100s) are generally available to those that work for small business, government and the NGO sector.

Tourist-oriented hotel / motel accommodation includes

South Hedland:

[5] Remplan 2025

[6] AEC Group and Syme Marmion & Co, *Workforce Accommodation Supply & Projected Demand*, City Of Karratha, 2018

- The Walkabout Motel, located opposite Port Hedland Airport, offers 160 air-conditioned rooms.
- Port Tourist Park, located opposite Port Hedland International Airport offers a range of accommodation options, including caravan sites, campsites, and rooms, catering to tourists, caravaners, and campers.
- The Landing Resort offers a range of accommodation options, with 280 premium Hotel rooms at the Landing Resort Hotel, and 230 other queen bedrooms.
- Blackrock Tourist Park in South Hedland offers a variety of accommodation options, including caravan sites, campsites, and cabins.

Port Hedland:

Hotels in Port Hedland include:

- The Pier Hotel
- The Esplanade Hotel
- The Hedland Hotel
- Summer Port Lodge
- Hospitality Port Hedland
- Discovery Parks – Port Hedland

It is estimated there are approximately 1,200 - 1,500 total hotel tourist rooms, including in cabins at caravan parks.

2.4. Short Stay Accommodation Occupants

Analysis TRA (Tourism Research Australia) data shows that 56% of business / work visitors (i.e. including FIFO workers) stay for 4-7 days or longer. The accommodation split is in the table below:

Table 10: Proportion of Business / Work Visitors staying at least 4 days in Port Hedland

	Proportion of Total Visitors
FIFO accommodation	27%
Other private property (incl company-owned)	13%
Hotel / motel	9%
Caravan park	5%
Rented house / apartment	2%
Other	1%
Total	**56%**

Source: TRA

Table 11: Business / Work Visitors staying at least 4 days in Port Hedland

	Proportion	Number (per day ave)
FIFO accommodation	48%	1,527
Other private property (incl company-owned)	23%	748
Hotel / motel	15%	485
Caravan park	9%	279
Rented house / apartment	3%	111
Other	2%	55
Total	**100%**	**3,205**

Source: TRA

Noteworthy items are:

- Over 100 longer term business visitors stay in privately rented houses and apartments. This represents around 4.5% of all private dwellings in the Town or a much higher proportion if company-owned dwellings are excluded from the total.
- On a daily average, around 485 occupants of hotel / motel tourist accommodation and 279 occupants of caravan parks are business / work visitors staying for 4 days or more. Of these around 36% in hotels and 54% in caravan parks stay for 8 days or more.
- Longer stay business / work visitors represent around one-third to one-half of all available hotel tourist accommodation.
- A high proportion, around 23%, stay in 'other private accommodation'. This is not closely defined in the data, but would include company-owned housing and units. It is understood this is a substantial proportion of housing stock in the Town.

3. Impact of Proposed Development

3.1. Summary Implications from the Data

Regarding market economics, the main relevant points to be drawn from the available data are:

- Compared with other comparable locations, there is a relatively soft sales market for houses and units.
- There is a similarly soft market for market for market rentals for standard longer term (12 months and more) leases.

An implication is there is relatively low demand for longer term (i.e. twelve months and more) accommodation. Also, rental price levels in Port Hedland and South Hedland are high compared with non-Pilbara locations. This will bring an affordability dimension for workers outside of the resources sector.

This does not mean there is no shortage of accommodation in Port Hedland. It might indicate that the right type of accommodation is in short supply.

Port Hedland has high construction costs. The market values for both new and established houses and units do not reflect those construction costs. In some cases construction cost of a potential project might exceed market value. Coupled with the ongoing risk of construction cost escalation, which recently has been substantial, the consequence is that private sector development residential projects for market sale in Port Hedland are generally not viable. New residential accommodation targeted at long term or permanent residents must therefore be backed by government or a major company, or be of a type that responds to market factors.

Port Hedland has a supply of bespoke FIFO accommodation and tourist-oriented accommodation. It is estimated there approximately 2,700 FIFO beds in FIFO villages. Of these at least 2,200 are committed to BHP and FMG, and others are likely to have long term supply contracts with major companies. Only a minority of FIFO beds (measured in the low 100s) are generally available to those that work for small business, government and the NGO sector. It is estimated there are approximately 1,200 - 1,500 total hotel tourist rooms, including in cabins at caravan parks.

Port Hedland has a high proportion of FIFO workers (approximately 29% of workers), slightly higher than Karratha. Around 56% of business / work visitors to Port Hedland (i.e. including FIFO workers) stay for longer than 4 days. While 71% of this groups stay in bespoke FIFO accommodation villages and company owned housing, around 24% stay in tourist-oriented hotels, motels and caravan parks. Longer stay business / work visitors represent around one-third to one-half of all available hotel tourist accommodation. Over 100 longer term business visitors stay in privately rented houses and apartments. This represents around 4.5% of all private dwellings in the Town or a much higher proportion if company-owned dwellings are excluded from the total.

FIFO workers can usefully be categorised into two groups: those that are employed directly by the major companies (in this case BHP and FMG are the most prominent) and those that work for small business, government and the NGO sector. The former routinely provide accommodation directly, either in bespoke FIFO villages or in company-owned housing in the town. Organisations in the latter category typically do not provide specific accommodation but tend to rely on accommodation

allowances as part of the salary package, leaving the recipient to find accommodation in the open market. It is estimated that approximately 38% of the FIFO workforce, or around 1,200 FIFO workers in Port Hedland, are in organisations that generally do not directly supply accommodation.

3.2. Impact of Kennedy Street Project

The proposed Kennedy Street development is for a mix of short stay accommodation with 252 rooms and 15 three bedroom town houses for long term /permanent residents. This will have a significant impact on accommodation supply in Port Hedland generally.

- It will reduce pressure on private sector houses and units. Some or all of the 100 or so houses and units currently routinely occupied by FIFO workers will be freed up to return to the long term residential market.
- By providing alternative accommodation for the 700 – 800 FIFO workers currently in tourist-oriented hotels, motels and caravan parks it will reduce a barrier to the expansion of the tourism industry.
- It will expand the available FIFO accommodation suitable for the approximately 1,200 workers not covered by arrangements with major resources companies. Evidence is that there is shortage of such accommodation.
- It will provide 15 townhouses suitable for permanent or long term residents. In the current market it is unlikely these would be built by the private sector in the absence of the cross-subsidy that other site uses (i.e. the short-stay accommodation) provide.
- The project is designed for transition to permanent accommodation, thus making an easy transfer when Town property economic circumstances change.

To Whom It May Concern,

Re: Statement of Support – South Hedland Regional Accommodation

We are pleased to express our support for Grounded's proposed worker accommodation development, *South Hedland Regional Accommodation (SHRA)*, located on Kennedy Street, South Hedland.

We understand that SHRA will provide a diverse range of accommodation options to help address the ongoing availability of workforce housing, while also offering permanent, residential solutions for essential and long-term workers.

As a business operating in Port Hedland, securing suitable accommodation for our workforce remains a persistent challenge. Unfortunately, our accommodation needs are often deprioritised in favour of larger mining and resource companies, further compounding the issue.

We welcome Grounded's efforts to introduce an alternative, high-quality accommodation solution in South Hedland. Given the current market constraints, additional worker housing is urgently needed and SHRA will play a crucial role in reducing operational risks for businesses like ours.

We look forward to the successful development of SHRA and the positive impact it will have on the region.

Sincerely,

LBrooks

Kuuwa Rentals

27th March 2025

To Whom It May Concern,

RE: Statement of Support – South Hedland Regional Accommodation

We are pleased to express our support for Grounded's proposed South Hedland Regional Accommodation (SHRA) development, located on Kennedy Street, South Hedland.

While Kuuwa Rentals does not currently have permanent operations in Port Hedland, we regularly travel to the region for site visits and to engage with clients and suppliers. The ongoing lack of suitable accommodation directly affects our team during these visits, and more broadly impacts the businesses we work with in the area.

This shortage not only limits access to workforce housing but also increases the cost of delivering services, as accommodation scarcity needs to be factored into pricing. These pressures are felt across the board, adding unnecessary strain on operations and budgets for everyone working in the region.

We welcome Grounded's efforts to introduce a high-quality, alternative accommodation solution. SHRA will support long-term and essential workers while easing pressure on the local market. It will help create a more stable and sustainable business environment.

We look forward to the successful development of SHRA and the positive impact it will have across the region.

Sincerely,

Wes Chapman

To Whom It May Concern,

Re: Statement of Support – South Hedland Regional Accommodation

We are pleased to express our support for Grounded's proposed worker accommodation development, *South Hedland Regional Accommodation (SHRA)*, located on Kennedy Street, South Hedland.

We understand that SHRA will provide a diverse range of accommodation options to help address the ongoing availability of workforce housing, while also offering permanent, residential solutions for essential and long-term workers.

As a business operating in Port Hedland, securing suitable accommodation for our workforce, ranging from 175-220 rooms per night, remains a persistent challenge.

We welcome Grounded's efforts to introduce an alternative, high-quality accommodation solution in South Hedland. Given the current market constraints, additional worker housing is urgently needed and SHRA will play a crucial role in reducing operational risks for businesses like ours.

We look forward to the successful development of SHRA and the positive impact it will have on the region.

Sincerely,

Michael Giacci

Re: Statement of Support – South Hedland Regional Accommodation

We are pleased to express our support for Grounded's proposed worker accommodation development, *South Hedland Regional Accommodation (SHRA)*, located on Kennedy Street, South Hedland.

We understand that SHRA will provide a diverse range of accommodation options to help address the ongoing availability of workforce housing, while also offering permanent, residential solutions for essential and long-term workers.

As a business operating in Port Hedland, securing suitable accommodation for our workforce—ranging from 5 - 10 rooms per night remains a persistent challenge. Unfortunately, our accommodation needs are often deprioritised in favour of larger mining and resource companies, further compounding the issue.

We welcome Grounded's efforts to introduce an alternative, high-quality accommodation solution in South Hedland. Given the current market constraints, additional worker housing is urgently needed and SHRA will play a crucial role in reducing operational risks for businesses like ours.

We look forward to the successful development of SHRA and the positive impact it will have on the region.

Yours sincerely

1. INTRODUCTION

1.1 Development Proposals

This Transport Impact Assessment (TIA) has been prepared by Flyt in support of the proposed South Hedland Regional Accommodation (SHRA) development – set to become the 'accommodation of choice' in the Port Hedland region.

The proposed development will represent a forward thinking, visionary community with a fresh outlook on workers accommodation solutions. With 250 'best in class' rooms and 15 three-bedroom residential styled townhouses, SHRA will offer a diverse range of accommodation solutions to suit local workforce requirements.

Featuring thoughtfully designed landscaping that responds to the local climate, provides shade, visual interest and integration within the residential area. SHRA will promote healthy and active lifestyles by incorporating a running track, pool, multi-court, as well as an outdoor and indoor gymnasium.

The accommodation village will provide worker accommodation situated in the northern part of South Hedland, approximately 1.2km north of Soth Hedland town centre.

The development proposals are summarised as comprising:

- 297 rooms to accommodate workers
    - 248 standard rooms
    - 45 townhouse rooms
    - 4 universal access rooms
- Associated worker accommodation facilities
    - Administration and convenience shop building
    - Recreation building
    - Gymnasium and transit building
    - Dining hall building
    - Outdoor gym, tennis/basketball court and pool
    - Undercover and outdoor areas featuring BBQ facilities
    - Maintenance, storage and linen shed
- 146 light vehicle parking bays
    - 96 standard light vehicle parking bays – for standard room workers
    - 30 standard light vehicle parking bays – for townhouse room workers
    - 2 universal access parking bays – for universal access room workers
    - 18 standard light vehicle parking bays – for accommodation village operator/staff parking
- Bus pick-up / drop-off area – to accommodate 2 buses

The subject development site is located on a former workers accommodation village, with the site currently discussed and largely vacant/undeveloped. The site is bound by Kennedy Street to the south, Crown Reserve 29612 (Lot 2945) to the north, Parker Street to the west, Lot 2940 to the southeast and Stanley Street to the east – as shown in Figure 1 and Figure 2.

Amended on 1/7/2025

Figure 1 Location of subject development site within South Hedland (aerial image source: MetroMap)

Figure 2 Location of subject development site within the northern part of South Hedland (aerial image source: MetroMap)

1.2 Site Context

The subject development site is in the northern part of South Hedland, approximately 1.2km north of South Hedland town centre. Port Hedland is approximately a 16km drive (14 minutes) to the north of the subject site and Port Hedland International Airport is approximately an 8km (9 minute) drive to the northeast of the site.

1.2.1 Recent History

From our understanding, BHP developed the site for a worker's camp between 1995 and 2001 and removed the camp by 2015. In 2013 a Management Order was granted to the Department of Training and Workforce Development (DTWD) over the subject site, which had been mainly used for a worker's camp formally known as BHP Pundulmurra Village.

The site was partially developed and formerly contained 184 accommodation units, being transportable style metal wall/metal roof constructed on concrete block foundations. Other facility buildings and structures were also contained on-site including administration, staff housing, kitchen/main dining and gym/recreation. The former BHP buildings and infrastructure have now been demolished and removed. Approximately 35% of the site within the eastern portion is undeveloped containing scattered trees within parkland and low lying shrubs/grasses.

1.2.2 Surrounding Land Uses

The land (Lot 2945) neighbouring to the north of the site is reserved under the Town Planning Scheme as 'Other public purpose – water and drainage' which is used by Water Corporation for water supply. There is an existing water tower on Lot 2945 to the north-east of the site.

Further north of Lot 2945 the land is generally zoned 'Urban Development' with low density single dwelling residential development having been established under the Lot 1693 Parker Street and Lot 2119 Stanley Street Development Plan.

To the west on the opposite side of Parker Street is a large educational campus containing the North Regional TAFE Pundulmurra South Hedland Campus and Hedland Senior High School. Reserve 37347 (Lot 5278) on corner of Kennedy Street and Parker Street is adjacent to the subject site.

To the south and east is low density (R20) single dwelling residential housing, with the neighbouring Lot 2940 Coppin Place land being cleared, undeveloped and containing low lying scrub/grasses.

Figure 3 and Figure 4 show the location of the subject site and immediate surrounds.

Amended on 1/7/2025

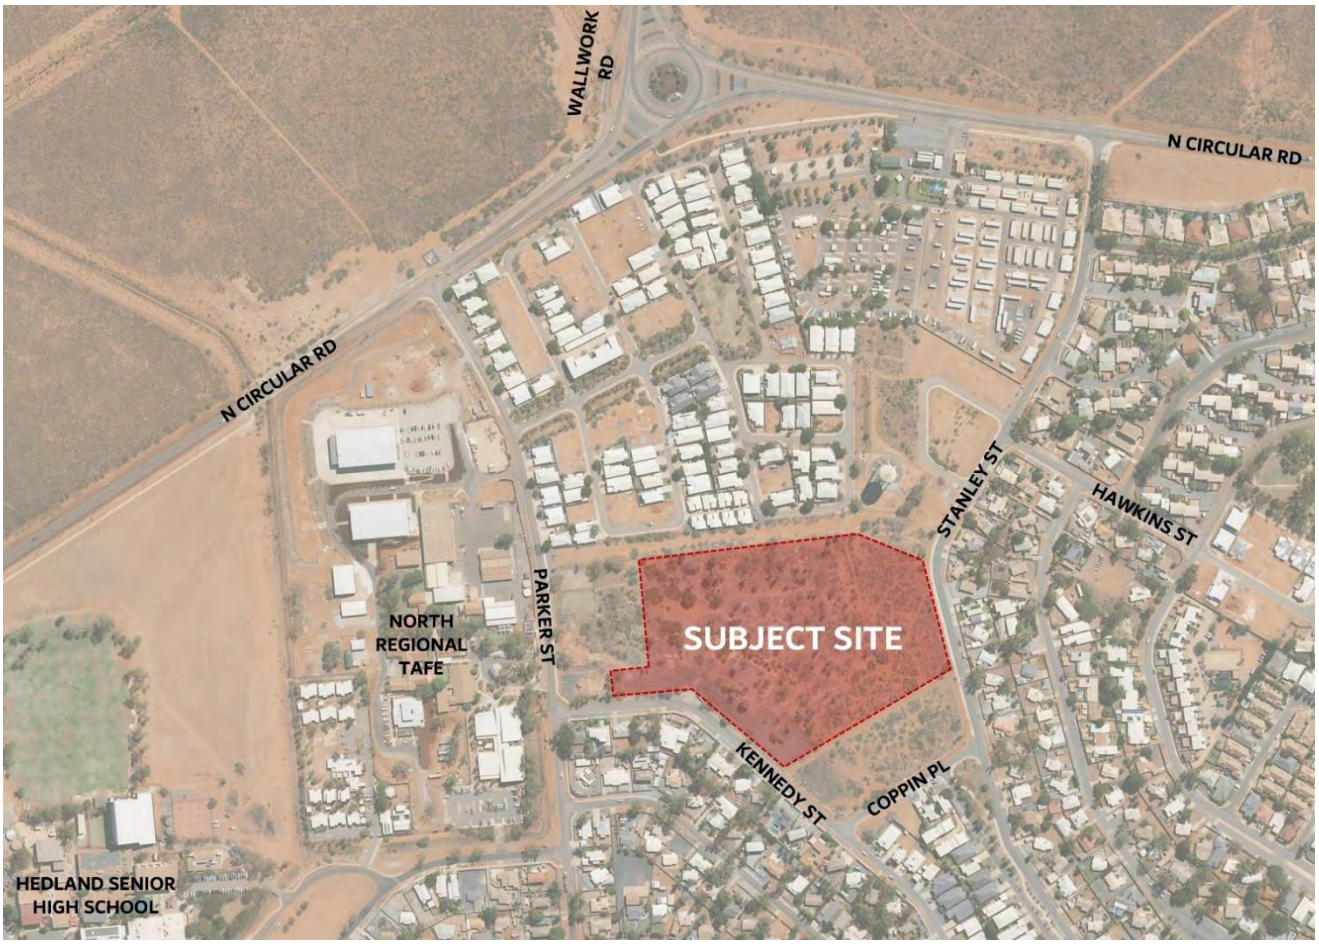

Figure 3 Location of the subject site and surrounds (aerial image source: MetroMap)

Figure 4 Location of the subject site and immediate surrounds (aerial image source: MetroMap)

1.3 Transport Impact Assessment

This report has been prepared in accordance with the WA Planning Commission's (WAPC) *Transport Impact Assessment Guidelines – Volume 4 Individual Developments* (2016) and the Town of Port Hedland *Traffic Statements and Assessments Information Sheets 6*. The WAPC Guidelines promote a three level assessment process, where the required level of assessment is dependent on the likely level of impact, as follows (and as shown in Figure 5):

- Low impact – less than 10 peak hour trips, no assessment required.
- Moderate impact – between 10 and 100 peak hour trips, Transport Impact Statement required.
- High impact – more than 100 peak hour trips, full Transport Impact Assessment required.

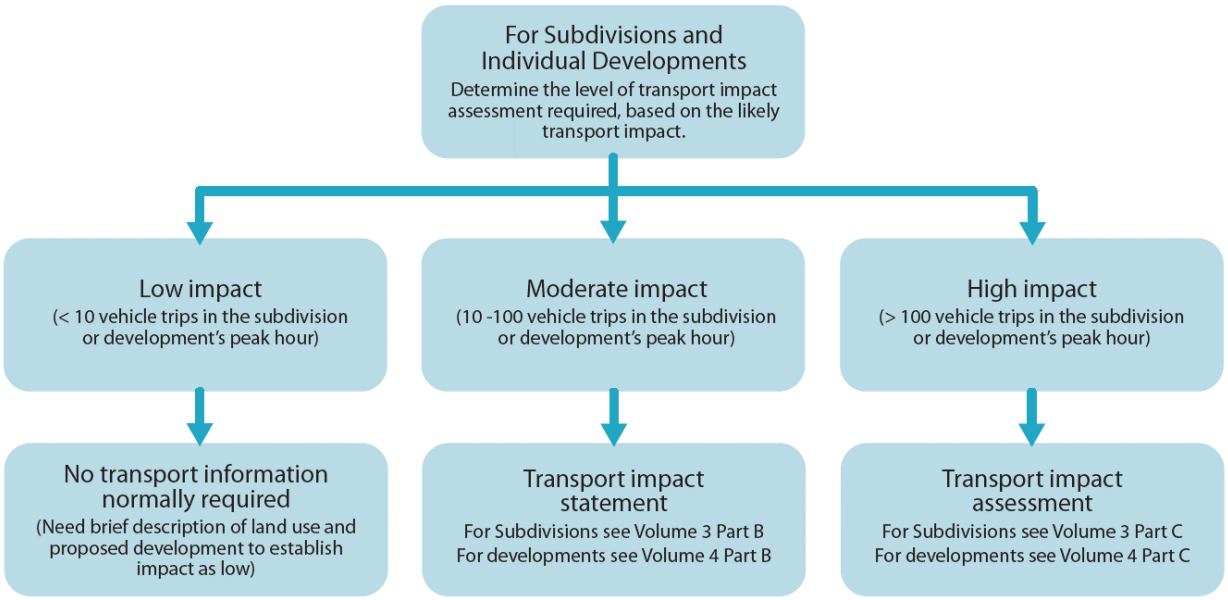

Figure 5 Level of transport impact assessment required (source: WAPC Transport Impact Assessment Guidelines, 2016)

The traffic attributable to the proposed development has been determined to be less than 100 vehicle trips in the operating peak hour, which would normally require a Transport Impact Statement, however the Town of Port Hedland requires a full Transport Impact Assessment where a development requires more than 25 parking spaces.

1.4 Report Structure

The report is structured as required by the *Transport Impact Assessment Guidelines* (WAPC, 2016), with the following sections:

- Proposed development.
- Vehicle access and parking.
- Provision for delivery and service vehicles.
- Traffic volumes.
- Frontage street.
- Public transport access.
- Pedestrian and bicycle access.
- Safety issues.
- Summary and conclusions.

Amended on 1/7/2025

2. PROPOSED DEVELOPMENT

The subject development site is largely a vacant lot containing scattered trees within parkland and low lying shrubs/grasses. Vehicle access to the subject development is proposed at two locations as follows:

- Retention of the previous vehicle crossover at the site along Kennedy Street – located approximately 125m to the east of the Parker Street/Kennedy Street intersection.
    - Retained crossover to provide two-way outbound vehicle access for light vehicles and buses (outbound bus movements only)
- Creation of a new vehicle crossover at the site along the Kennedy Street frontage – located approximately 90m to the east of the Parker Street/Kennedy Street intersection.
    - New crossover to provide two-way vehicle access for light vehicles, service vehicles and buses (inbound bus movements only)

The development proposals are summarised as comprising:

- 297 rooms to accommodate workers
    - 248 standard rooms
    - 45 townhouse rooms
    - 4 universal access rooms
- Associated worker accommodation facilities
    - Administration and convenience shop building
    - Recreation building
    - Gymnasium and transit building
    - Dining hall building
    - Outdoor gym, tennis/basketball court and pool
    - Undercover and outdoor areas featuring BBQ facilities
    - Maintenance, storage and linen shed
- 146 light vehicle parking bays
    - 96 standard light vehicle parking bays – for standard room workers
    - 30 standard light vehicle parking bays – for townhouse room workers
    - 2 universal access parking bays – for universal access room workers
    - 18 standard light vehicle parking bays – for accommodation village operator/staff parking
- Bus pick-up / drop-off area – to accommodate 2 buses

The layout plans for the proposed development are shown across Figure 6 to Figure 10.

Amended on 1/7/2025

Figure 6 Indicative render of proposed overall layout plan for the subject site (source: Grounded, 2025)

Figure 7 Proposed overall layout plan for the subject site (source: Grounded, 2025)

Amended on 1/7/2025

Figure 10 Proposed townhouses layout plan for the subject site (source: Grounded, 2025)

3. VEHICLE ACCESS AND PARKING

3.1 Site Access

Vehicle access to the subject development is proposed at two locations along the Kennedy Street frontage of the site. One site access is via the retention of the previous vehicle crossover into the site, and the second site access is via a new crossover into the site.

The proposed crossovers can be described as follows:

- Retention of the previous vehicle crossover at the site along Kennedy Street – located approximately 125m to the east of the Parker Street/Kennedy Street intersection.
    - Retained crossover to provide two-way outbound vehicle access for light vehicles and buses (outbound bus movements only)
    - Retained left-in and left-out slip lane road widening to provide for the safe entry and exit of vehicles
- Creation of a new vehicle crossover at the site along the Kennedy Street frontage – located approximately 90m to the east of the Parker Street/Kennedy Street intersection.
    - New crossover to provide two-way vehicle access for light vehicles, service vehicles and buses (inbound bus movements only)

No vehicle access is proposed along the Stanley Street frontage of the site, to mitigate any impact of site traffic on surrounding local residential streets. The location of the proposed crossovers into the site are shown in Figure 11.

Figure 11 Location of proposed crossovers into the subject site along the Kennedy Street frontage (base plan source: Grounded, 2025)

3.2 Worker Vehicle Access

All light vehicles will enter and exit the site from Kennedy Street via one of the two vehicle crossovers. The route of inbound vehicle movements are shown in Figure 12 and the route of outbound vehicle movements are shown in Figure 13.

Figure 12 Route of inbound vehicle movements into the subject site from Kennedy Street (base plan source: Grounded, 2025)

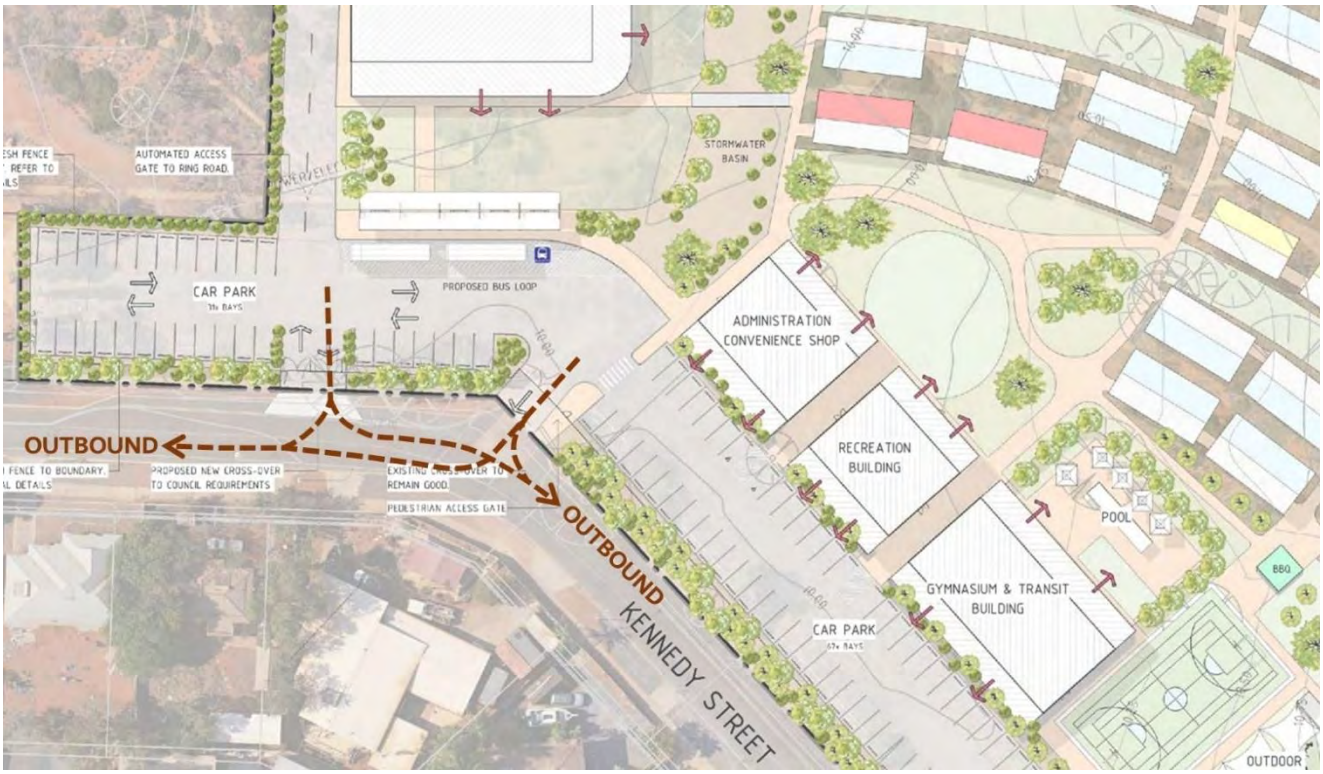

Figure 13 Route of outbound vehicle movements onto Kennedy Street from the subject site (base plan source: Grounded, 2025)

Workers accommodated at the proposed SHRA development will have access to light vehicle parking bays across the site – see Figure 14 for details and location of parking bays.

Workers in standard bedroom accommodation units will have access to 98 parking bays along the Kennedy Street frontage of the site:

- 24 parking bays located to the west of the new crossover into the subject site.
- 7 parking bays located between the two crossovers into the subject site.
- 67 parking bays to the east of the retained existing crossover into the subject site – this includes 2 universal access parking bays for use by visitors or workings in the accessible accommodation units.

Workers in the townhouse accommodation will have access to 30 parking bays located adjacent to the townhouses along the eastern side of the site. The townhouse parking is accessed through the main parking area adjacent to Kennedy Street and via the one-way southern roadway around the site. To exit the townhouse parking vehicle will travel via the one-way northern roadway and around the staff parking and Dining Hall Building via a section of two-way roadway to exit the site.

Access to the townhouse parking will require workers to pass through the Automated Access Gate at the start of the one-way southern roadway and the Automated Access Gate at the start of the two-way roadway adjacent to the Dining Hall Building. Workers with permission to access the townhouse parking will be issued with access control card/fob to open the Automated Access Gate at the start of the one-way southern roadway – ground loops will be installed at the Automated Access Gate at the start of the two-way roadway adjacent to the Dining Hall Building, with the gate automatically opening for exiting vehicles.

Amended on 1/7/2025

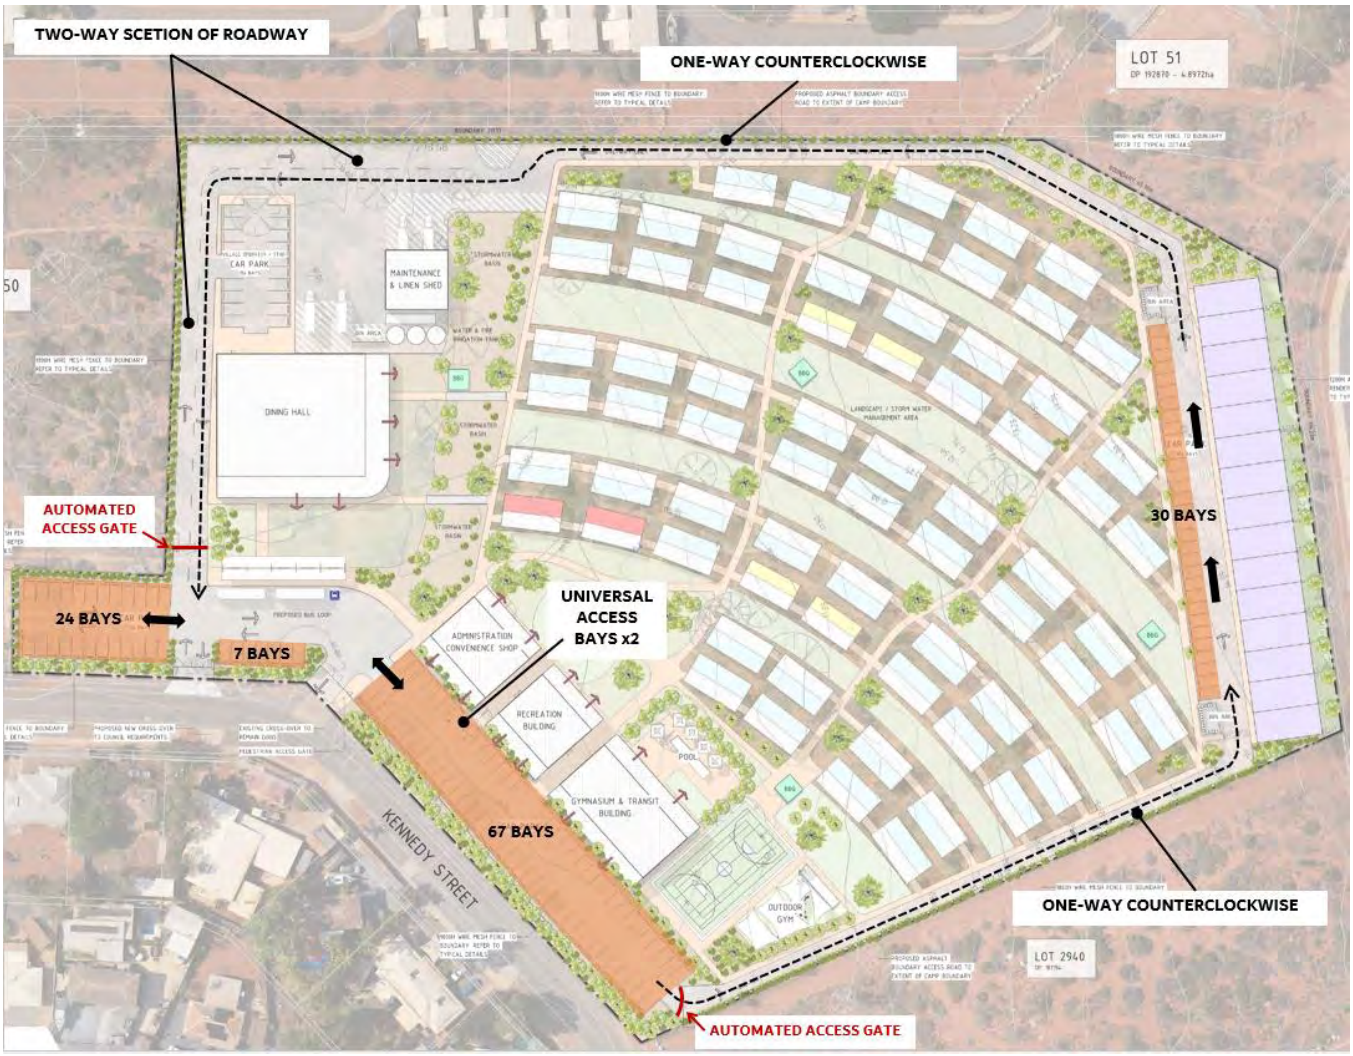

Figure 14 Route of workers light vehicle movements through the subject site (base plan source: Grounded, 2025)

3.3 Staff Vehicle Access

The site operators and staff will have access to parking bays within a separate staff car park located in the northwest corner of the site. The staff car park will have 18 parking bays and is accessed via the two-way roadway along the western boundary of the development adjacent to the Dining Hall Building – see Figure 15 for details and location of staff parking.

Staff will access the site via the new crossover on Kennedy Street and access the two-way roadway via an Automated Access Gate. Site operators and staff will be issued with access control card/fob to open the Automated Access Gate – ground loops will be installed at the Automated Access Gate, with the gate automatically opening for exiting vehicles.

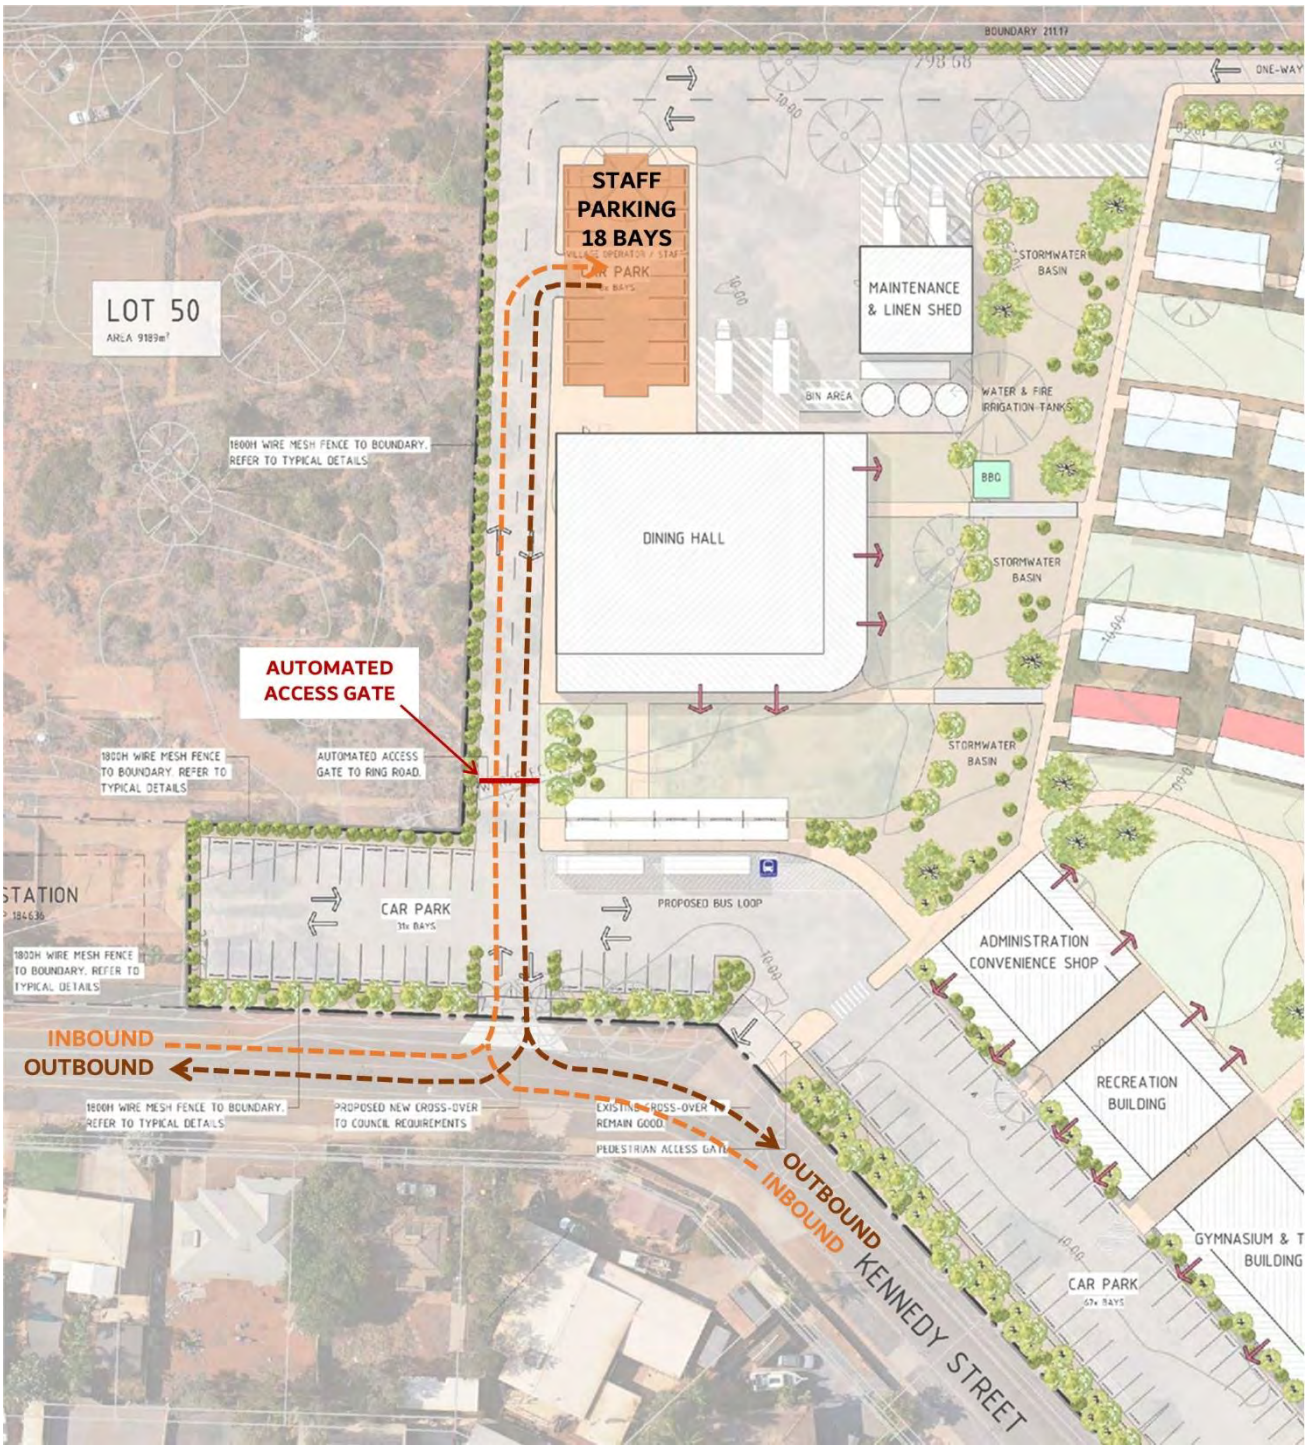

Figure 15 Route of staff light vehicle movements through the subject site (base plan source: Grounded, 2025)

3.4 Bus Access

Buses will be used to transport workers to/from Port Hedland International Airport, as well as transport some workers to/from their place of work. It is estimated that 50% of workers will use bus transport to/from the site as outlined in Section 5.1.1.

All bus movements will enter the site from Kennedy Street via the western most new crossover into the site and all bus movements will exit the site via the eastern most retained existing crossover.

Buses will enter and exit performing a loop route and travel in forward gear at all times. Buses will access one of the two bus bays adjacent to the covered bus passenger waiting area to the south of the Dining Hall Building – as shown in Figure 16.

Buses will make the following movement

- Bus will enter the site via the new crossover on Kennedy Street – travelling from Parker Street.
- Bus will drive to the bus pick-up / drop-off area.
- Bus will set down to drop off / pick up workers.
- Bus will exit the site via the retained existing crossover on Kennedy Street – travelling towards Parker Street.

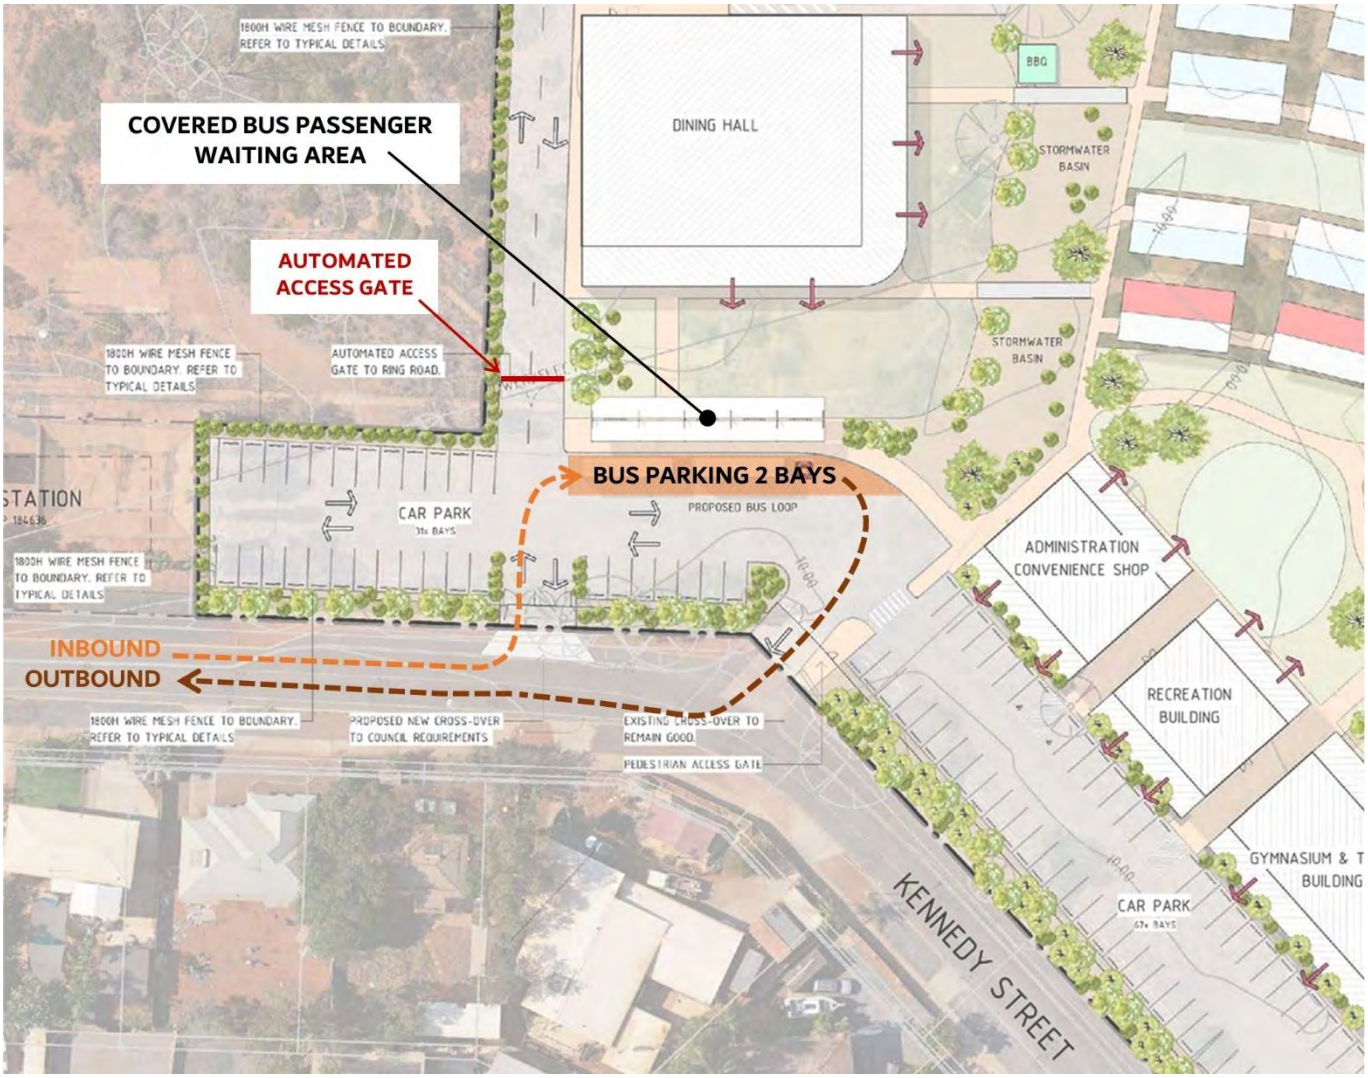

Figure 16 Proposed bus movements through the subject site (base plan source: Grounded, 2025)

Figure 17 shows the vehicle swept path for a 12.5m bus vehicle template. The swept path shows how the bus can enter and exit the site in forward gear and parking kerbside adjacent to the bus boarding and alighting area.

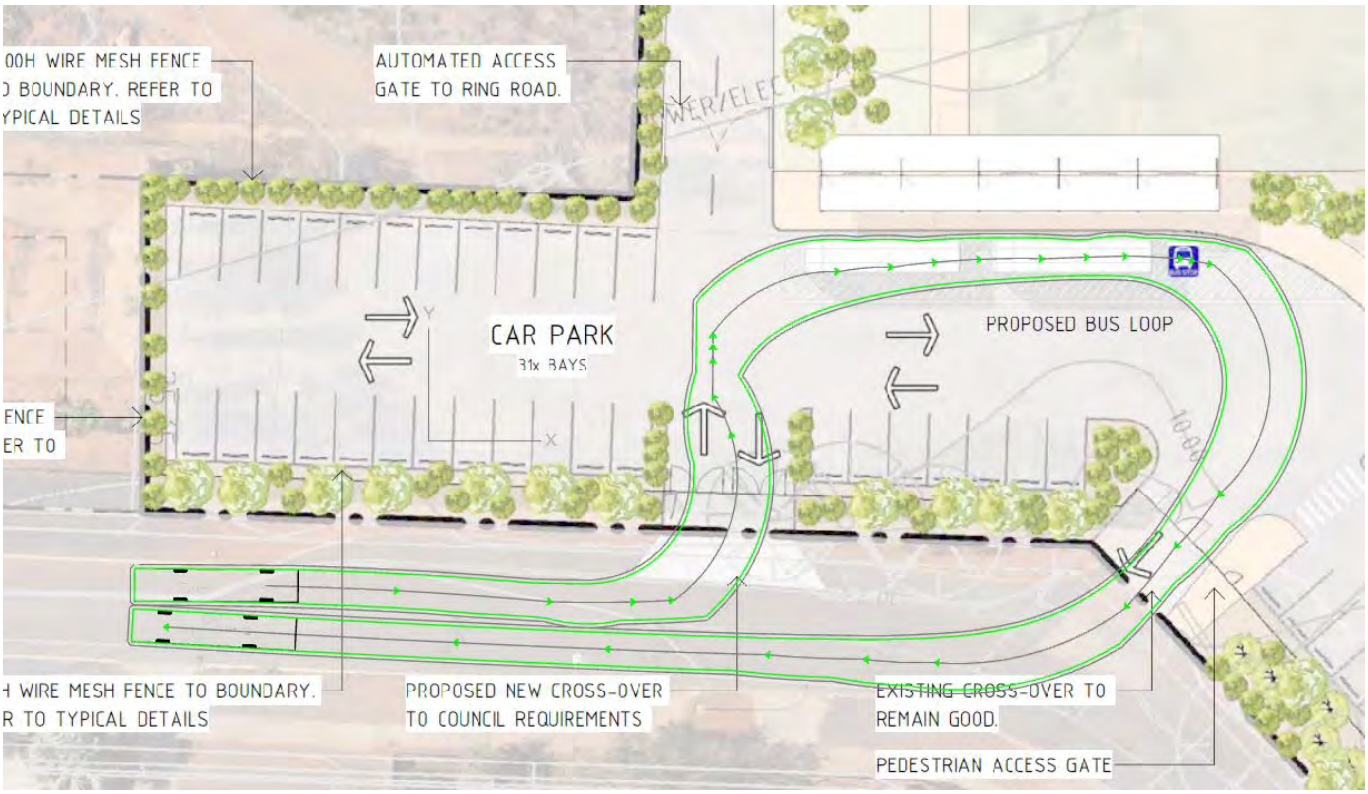

Figure 17 Vehicle swept path for a 12.5m bus vehicle template (base plan source: Grounded, 2025)

3.5 Delivery and Service Vehicle Access

All site delivery and service vehicle movements will enter and exit the site from Kennedy Street via the western new crossover into the site.

Upon entering the site all delivery and service vehicles would access the two-way roadway along the western side of the site adjacent to the Dining Hall Building to access the service yard area in the northwest corner of the site – as shown in Figure 18. The service yard provides delivery and service vehicle access to the loading dock for the back of house area of the Dining Hall Building and the Maintenance and Linen Shed Building.

Delivery and service vehicles will access the site via the new crossover on Kennedy Street and access the two-way roadway via an Automated Access Gate. Regular providers servicing the site will be issued with access control card/fob to open the Automated Access Gate – ground loops will be installed at the Automated Access Gate, with the gate automatically opening for exiting vehicles. Other providers servicing the site will use an intercom adjacent to the Automated Access Gate to call through to the site operator in the Administration Building to open the Automated Access Gate.

Amended on 1/7/2025

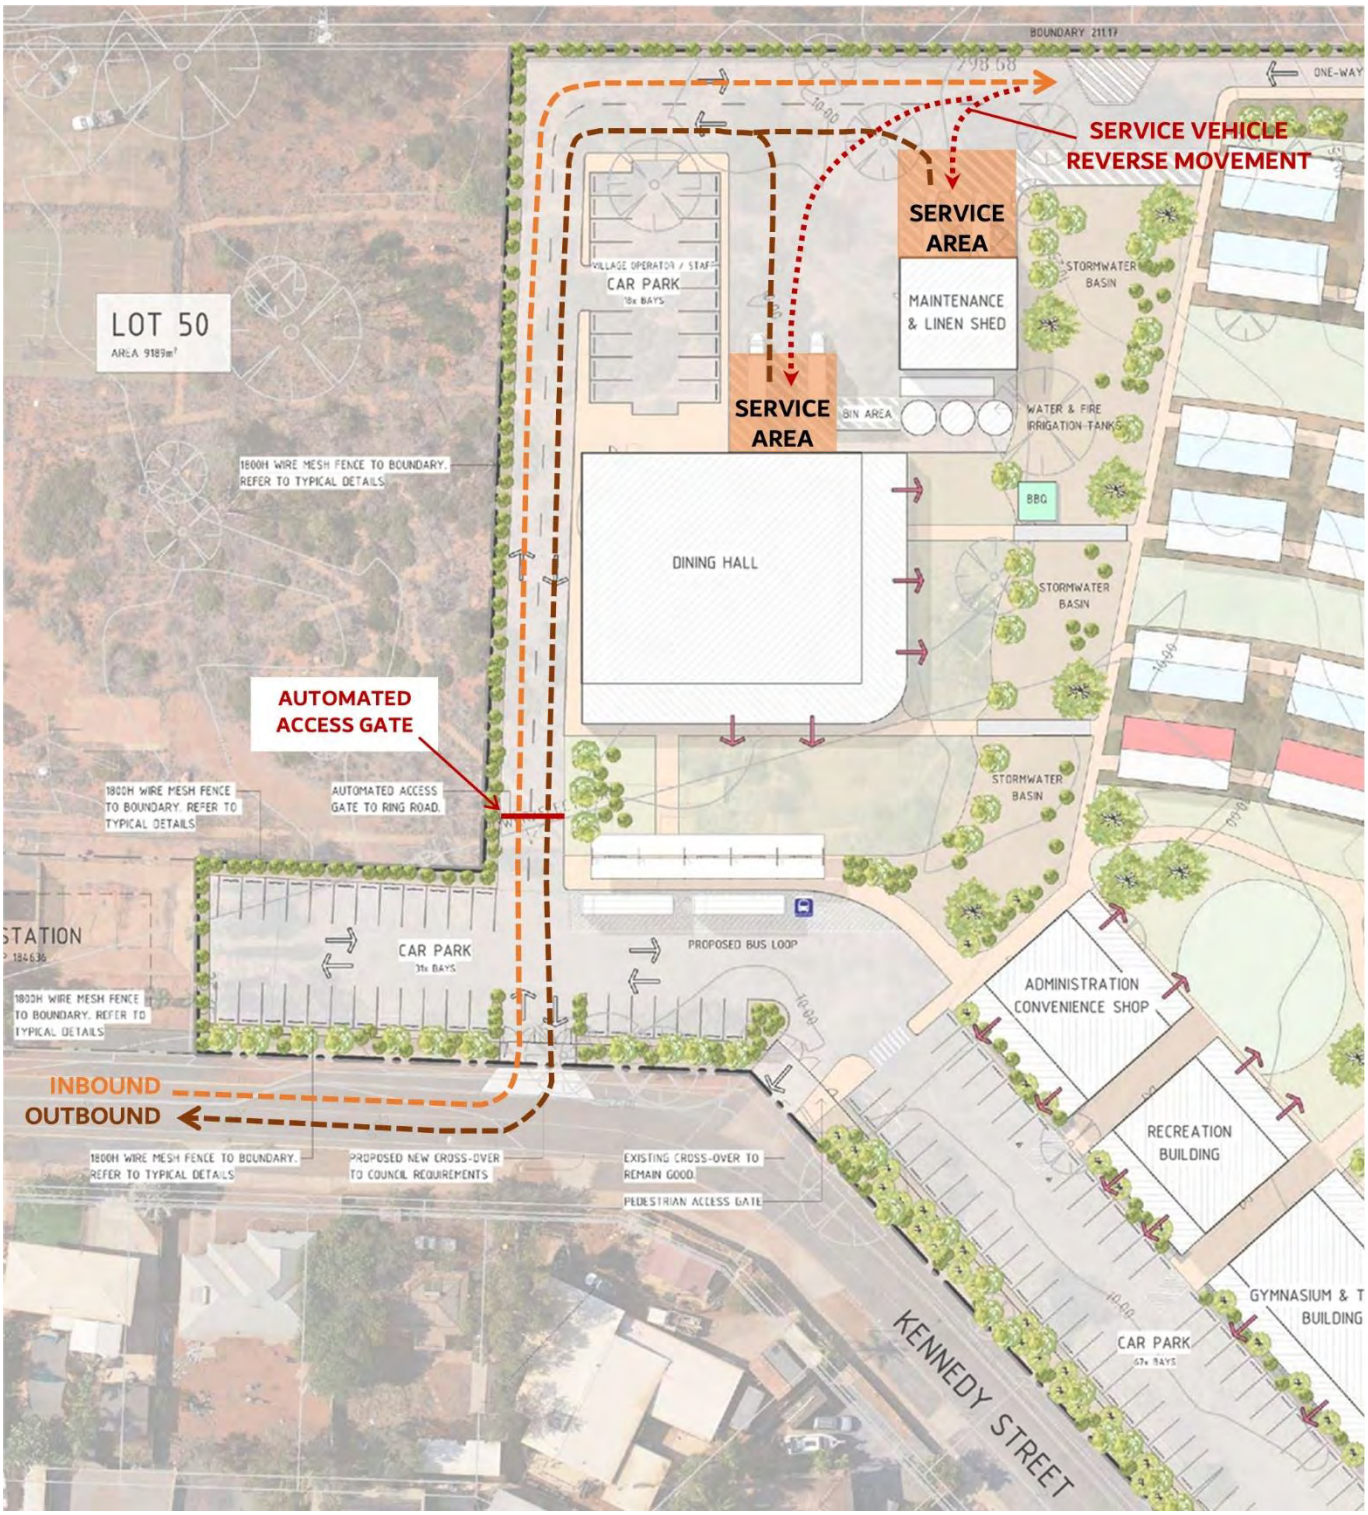

Figure 18 Proposed delivery and service vehicle movements through the subject site (base plan source: Grounded, 2025)

It is anticipated that there will be two types of waste collection vehicles:

- Residential – waste collection vehicles will service the two wheely bin areas adjacent to the townhouses – collecting residential quantities of waste generated by the resident workers.
- Commercial – waste collection vehicles will service the large waste bins adjacent to the Dining Hall Building – collecting commercial quantities of waste generated from the Dining Hall.

In addition, service vehicles will access the rear of the Dining Hall Building to service (pump out) the grease trap.

Waste collection vehicles will enter and exit the site from Kennedy Street via the western new crossover into the site. Upon entering the site all waste collection vehicles will travel through the parking area to access the one-way southern roadway to perform a loop around the site to service the bin areas adjacent to the townhouses. Waste collection vehicles will then travel via the one-way northern roadway to service the bin area in the service yard. Waste collection vehicles will then exit the site via the two-way roadway adjacent to the Dining Hall Building – as shown in Figure 19.

Waste collection vehicles will access the site via the new crossover on Kennedy Street and access the one-way southern roadway via an Automated Access Gate. Regular waste collection providers servicing the site will be issued with access control card/fob to open the Automated Access Gate – ground loops will be installed at the Automated Access Gate, with the gate automatically opening for exiting vehicles. Other waste collection providers servicing the site will use an intercom adjacent to the Automated Access Gate to call through to the site operator in the Administration Building to open the Automated Access Gate.

Amended on 1/7/2025

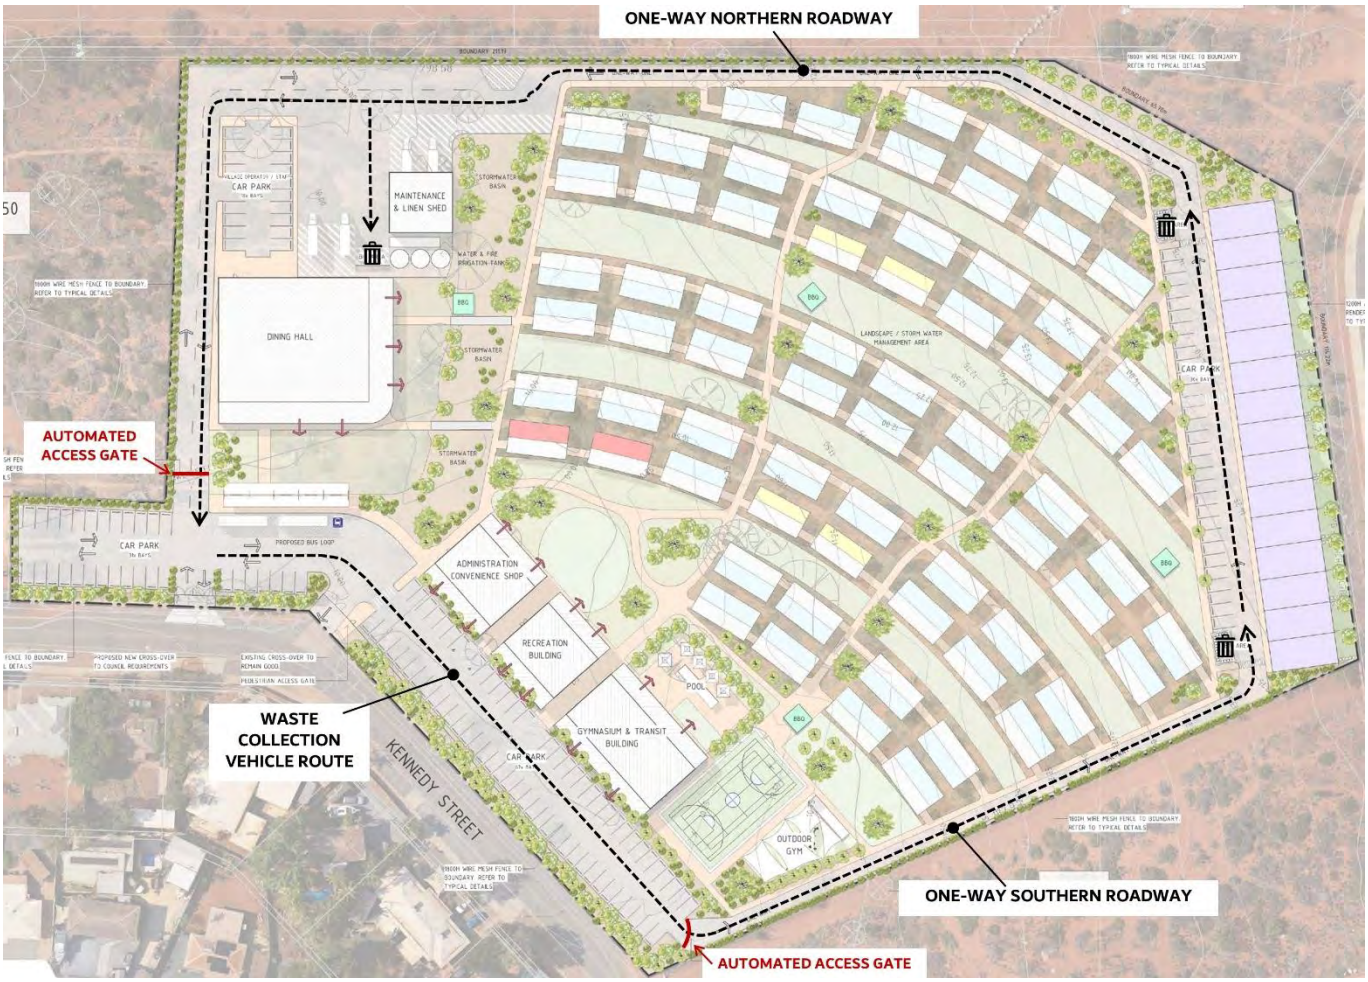

Figure 19 Proposed waste collection vehicle movements through the subject site (base plan source: Grounded, 2025)

4. PROVISION FOR DELIVERY AND SERVICE VEHICLES

As outlined in Section 3.5, all site delivery, service vehicle and waste collection vehicle movements will enter and exit the site from Kennedy Street via the western new crossover into the site.

Proponents for the development have confirmed that deliveries by service vehicles will occur several times during the day to access the loading dock for the Dining Hall Building and the Maintenance and Linen Shed Building. Service vehicle swept paths are shown for a 19m semi-trailer accessing the site and the loading dock for the Dining Hall Building in Figure 20. Service vehicle swept paths are shown for an 8.8m medium rigid vehicle accessing the site and the Maintenance and Linen Shed Building in Figure 21.

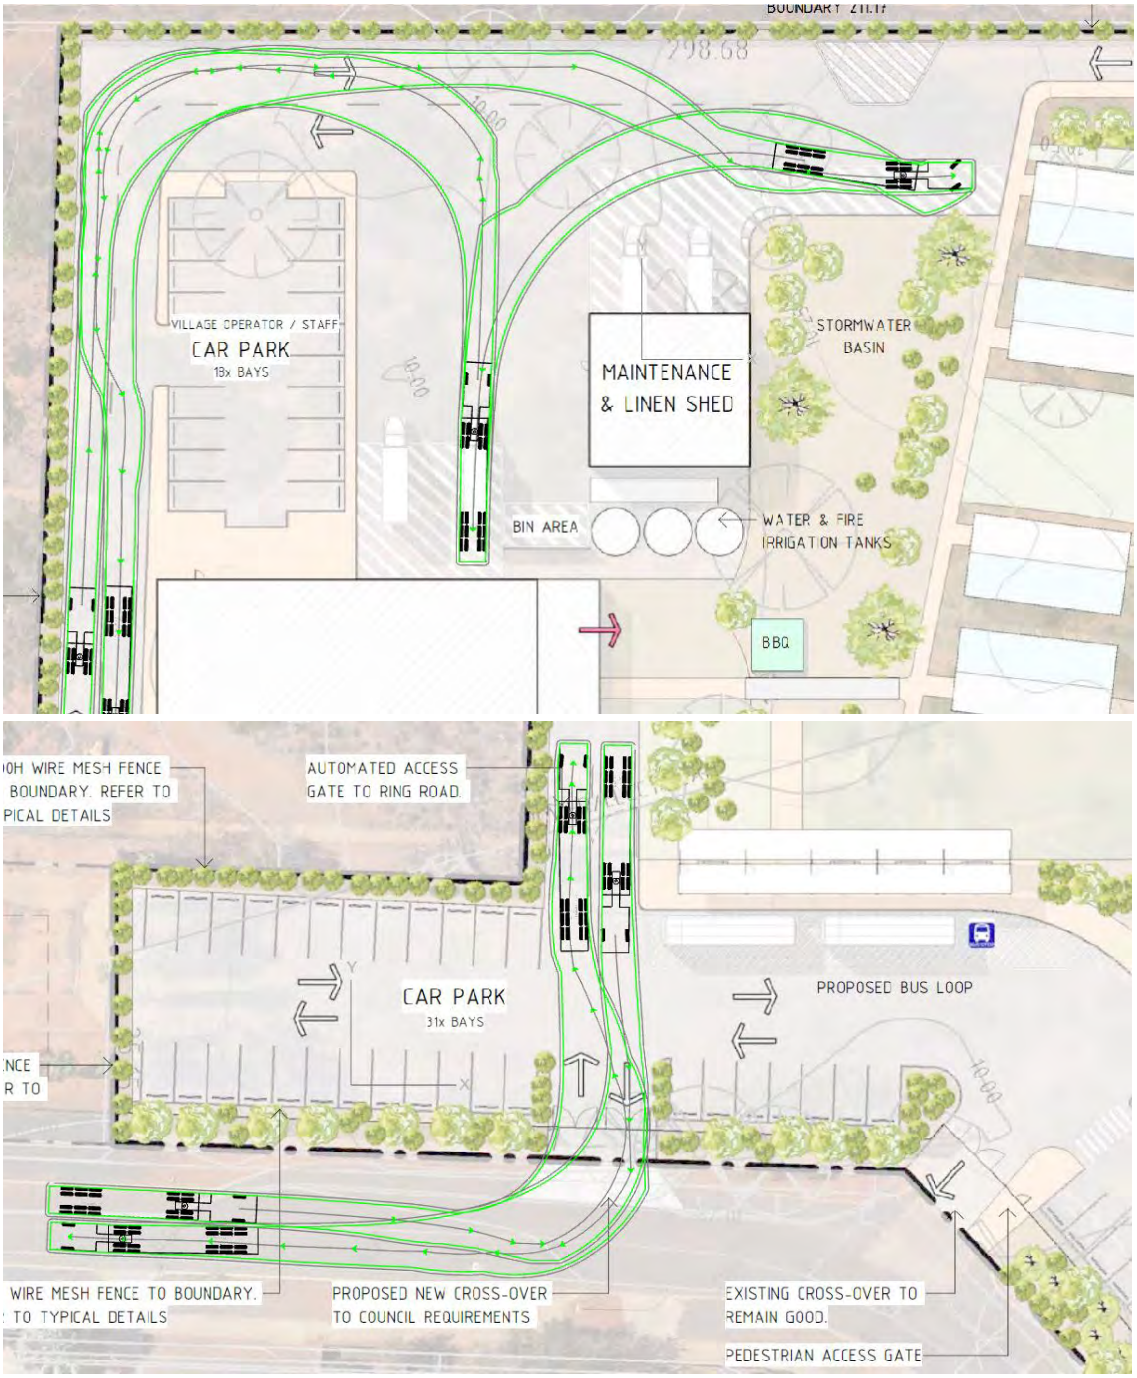

Figure 20 Vehicle swept path for a 19m semi-trailer vehicle template (base plan source: Grounded, 2025)

Amended on 1/7/2025

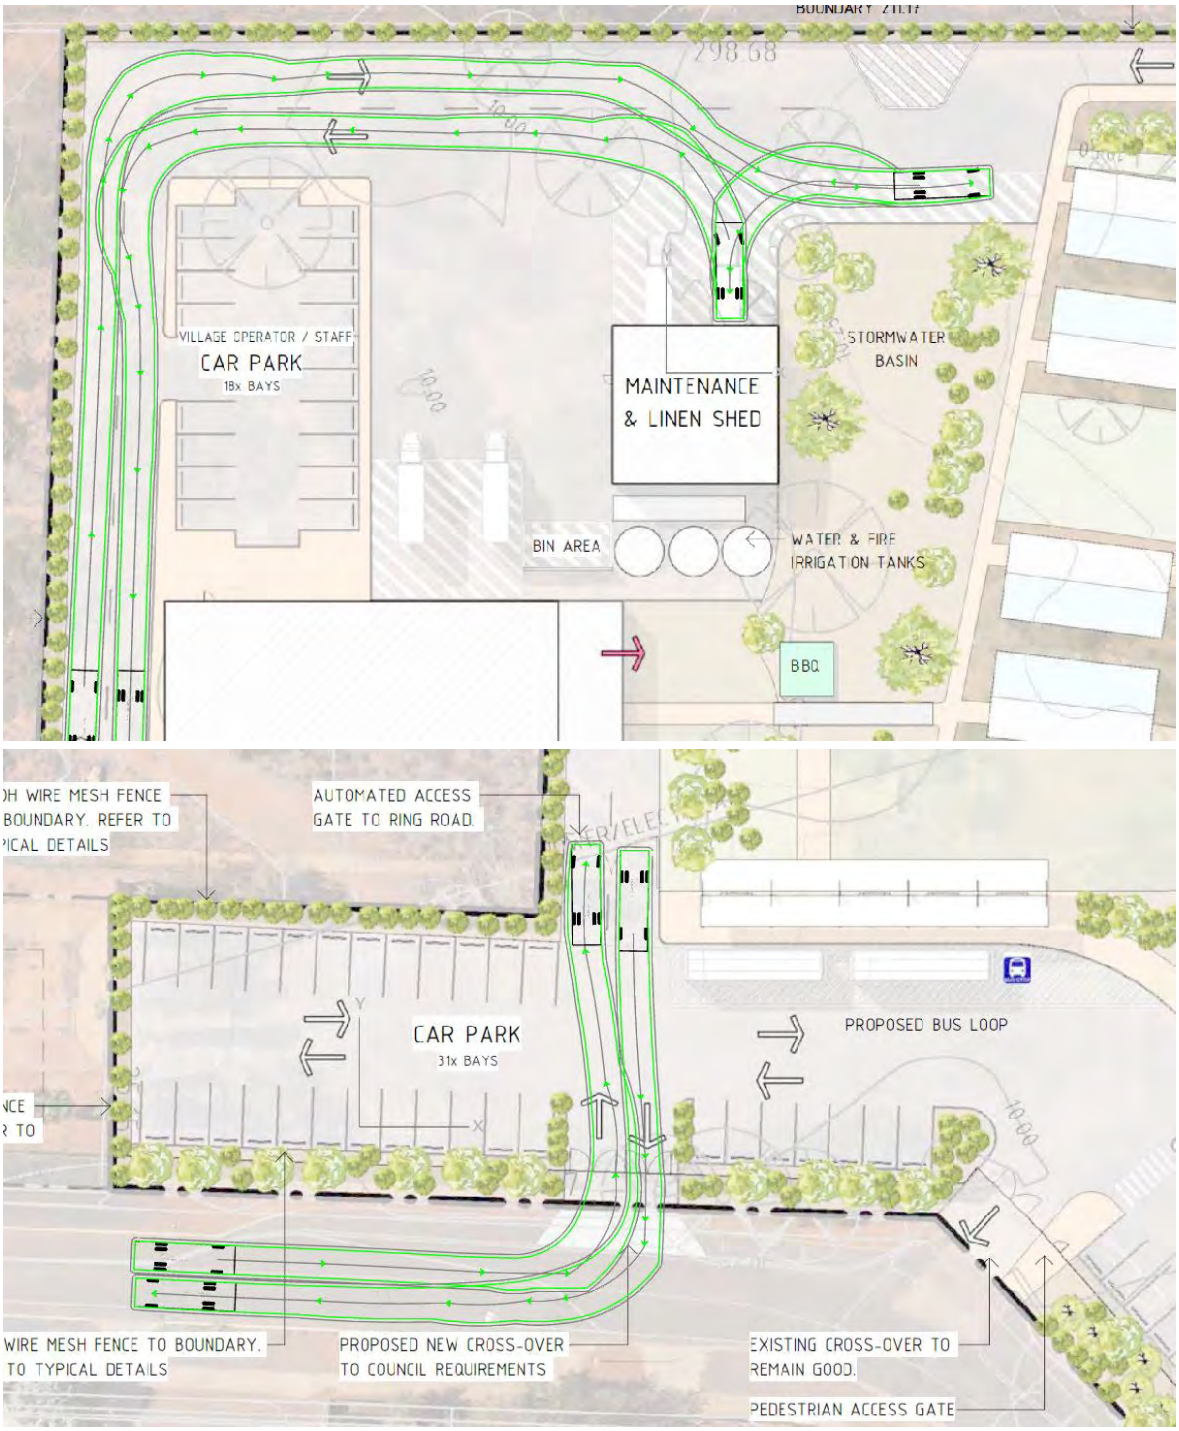

Figure 21 Vehicle swept path for an 8.8m medium rigid vehicle template (base plan source: Grounded, 2025)

Proponents for the development have confirmed that a private waste collection service will collect waste generated from the kitchen and maintenance activities via the service area. In addition, a bin store for the townhouse resident rubbish will also be provided for a private waste collection service. Waste collection vehicle swept paths are shown for a 10.3m waste collection vehicle accessing the site and the bin areas around the site in Figure 22.

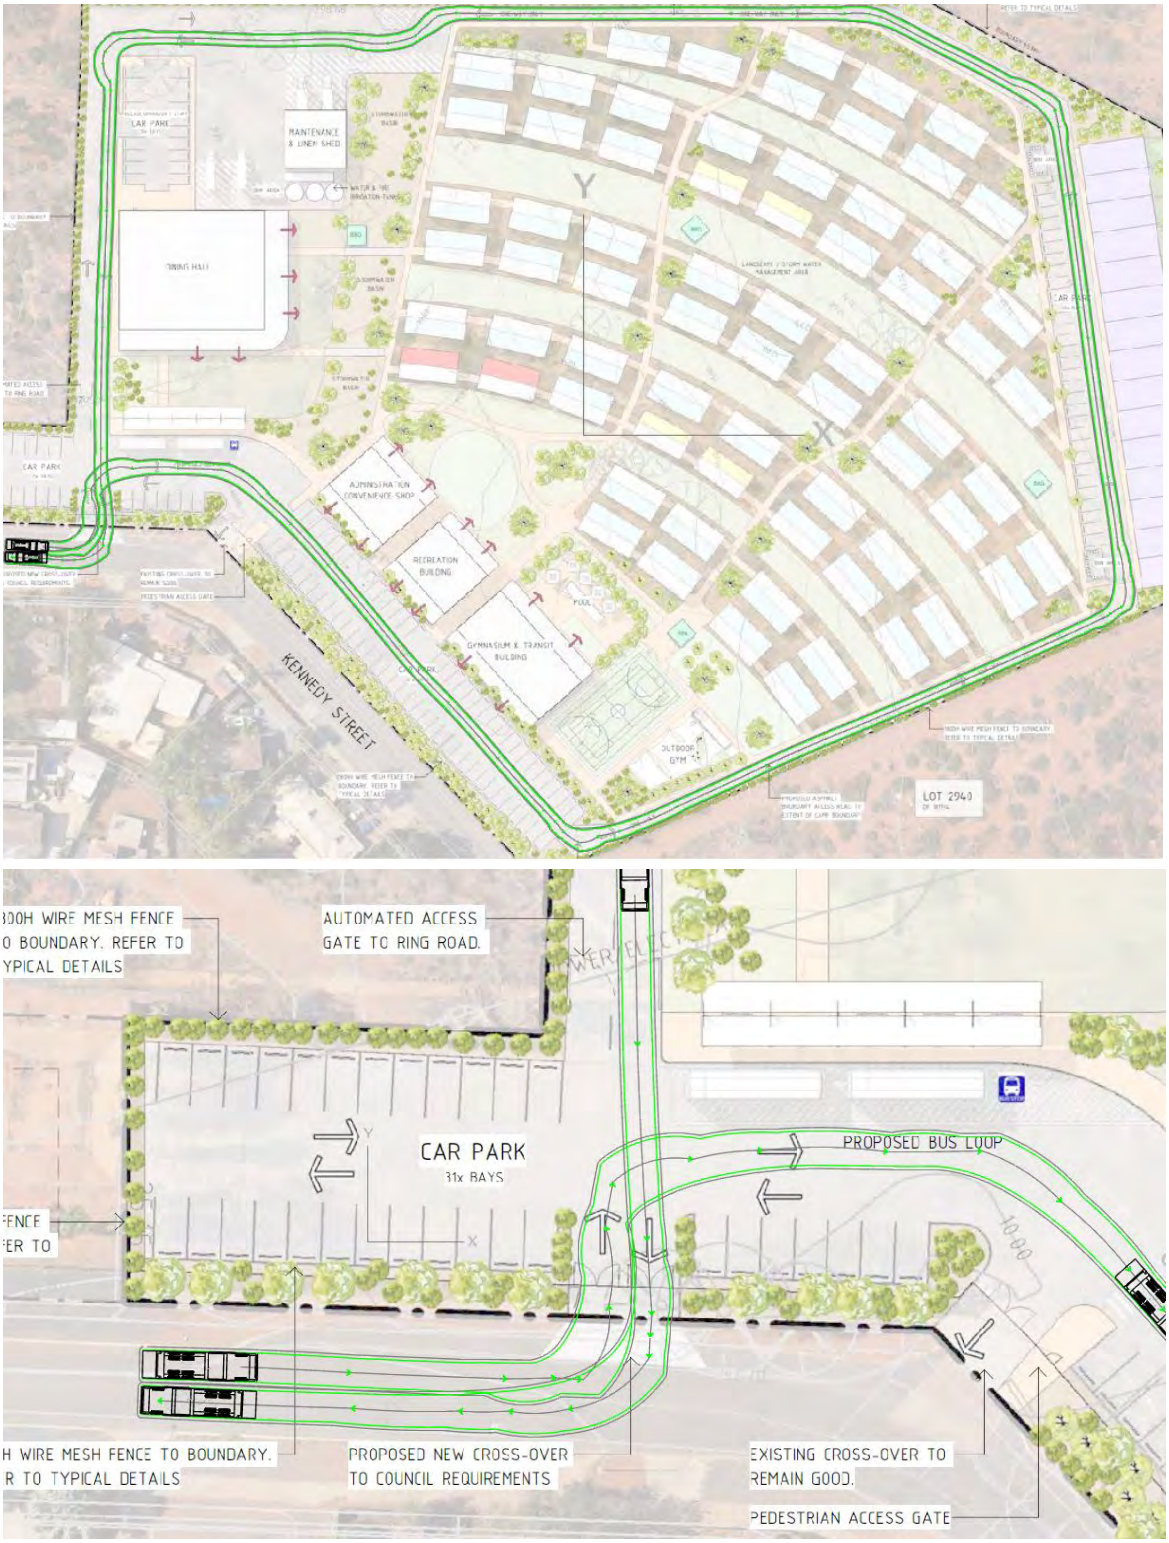

Figure 22 Vehicle swept path for a 10.3m waste collection vehicle template (base plan source: Grounded, 2025)

Amended on 1/7/2025

5. TRAFFIC VOLUMES

5.1 Trip Generation

The subject development site is located in the northern part of South Hedland, approximately 1.2km north of South Hedland town centre. Port Hedland is approximately a 16km drive (14 minutes) to the north of the subject site and Port Hedland International Airport is approximately an 8km (9 minute) drive to the northeast of the site.

The development proposals are summarised as comprising:

- 297 rooms to accommodate workers
    - 248 standard rooms
    - 45 townhouse rooms
    - 4 universal access rooms
- Associated worker accommodation facilities
    - Administration and convenience shop building
    - Recreation building
    - Gymnasium and transit building
    - Dining hall building
    - Outdoor gym, tennis/basketball court and pool
    - Undercover and outdoor areas featuring BBQ facilities
    - Maintenance, storage and linen shed
- 146 light vehicle parking bays
    - 96 standard light vehicle parking bays – for standard room workers
    - 30 standard light vehicle parking bays – for townhouse room workers
    - 2 universal access parking bays – for universal access room workers
    - 18 standard light vehicle parking bays – for accommodation village operator/staff parking
- Bus pick-up / drop-off area – to accommodate 2 buses

5.1.1 Site Operational Details

The trip generation for the proposed land use has been determined by applying operational details provided by the proponents of the site – based on the operational requirements of the workers who will be based at the accommodation village. The operational information provided to Flyt includes:

- Total of 297 workers will be based on-site at any one time.
- 252 transient workers rooms (including 4 universal access rooms) will be occupied by fly in fly out (FIFO) or drive in drive out (DIDO) shift workers on either an 8:6, 2:1 or 3:1 roster.
- 45 townhouse rooms will be leased on a 12 monthly basis to white collar workers requiring permanent accommodation in the South Hedland/Port Hedland area. These workers may be on a residential roster such as 5:2/4:3 or 11:3.

- The transport requirements of the workers on-site are summarised below:
    - FIFO worker without transport – requiring a bus to SHRA from the airport and busing to and from SHRA to their work site at start and end of shift.
    - FIFO worker with transport – they collect a light vehicle (LV) when they arrive in South Hedland/Port Hedland for their shift and use the LV during the length of their roster.
    - DIDO worker with transport -they drive into South Hedland/Port Hedland from Karratha, Exmouth, Broome, etc to undertake works in the Port Hedland area and have access to their own vehicle.

- FIFO workers using buses for transport is estimated being 50% of the room allocation – 126 workers.
    - No on-site parking requirement to accommodate these workers.
- FIFO/DIDO workers with LV transport are estimated being 50% of the room allocation – 126 workers. It is estimated that 60% of workers with LV transport will share 2 people per vehicle (76 workers / 38 vehicles), and 40% of workers with LV transport will travel alone (50 workers / 50 vehicles).
    - On-site parking requirement for 88 light vehicles to accommodate these workers – with 98 bays provided on-site.
- The 45 long-term lease workers staying in townhouse rooms are anticipated to have access to a LV – it is estimated half of the workers will share 2 people per vehicle (22 workers / 11 vehicles) and 50% will travel alone (23 workers / 23 vehicles).
    - On-site parking requirement for 34 light vehicles to accommodate these workers – with 30 bays provided adjacent to the townhouses and up to 10 additional bays available on-site (see FIFO/DIDO parking requirements above).
- Total of 25 staff will be required to operate the SHRA village site – it is estimated that 50% of staff will be local hires and drive to the site in their own LV (13 staff / 13 vehicles) and 50% of staff will travel to and from SHRA village via bus (12 staff / 1 x 12 seat bus).
    - On-site parking requirement for 14 vehicles to accommodate the expected level of staffing – with an 18 bay staff car park provided in the northwest corner of the site.

5.1.2 Trip Generation Assumptions

Based on the site operational details outlined above, Table 1 provides an overview of the expected workers peak hour trip generation from the subject site.

Table 1 Workers peak hour trips generated by the proposed development

Peak Period	Time/Hour	Direction of Vehicle Movement	Bus Movements	Light Vehicle Movements	TOTAL MOVEMENTS
Morning Workforce departing from SHRA	0500-0600 (AM Peak Hr)	Outbound	1 x 50 seat bus 1 x 22 seat bus 1 x 12 seat bus	30 LV x 2ppl 31 LV x 1ppl	**64 vehicles / 175 workers**
	0600-0700		1 x 22 seat bus 1 x 12 seat bus	10 LV x 2ppl 25 LV x 1ppl	**37 vehicles / 79 workers**
	0700-0800		1 x 12 seat bus	9 LV x 2ppl 13 LV x 1ppl	**23 vehicles / 43 workers**
Afternoon Workforce returning to SHRA	1600-1700	Inbound	1 x 12 seat bus	9 LV x 2ppl 13 LV x 1ppl	**23 vehicles / 43 workers**
	1700-1800		1 x 22 seat bus 1 x 12 seat bus	10 LV x 2ppl 25 LV x 1ppl	**37 vehicles / 79 workers**
	1800-1900 (PM Peak Hr)		1 x 50 seat bus 1 x 22 seat bus 1 x 12 seat bus	30 LV x 2ppl 31 LV x 1ppl	**64 vehicles / 175 workers**

It is expected that the peak hour vehicle trip generation for the worker activity across the site would be approximately 64 vehicle trips during the AM and PM peak hours, made up of 61 light vehicles and 3 buses.

In addition to the worker activity, approximately 25 staff will be required to operate the SHRA village site. It is estimated that 50% of staff will be local hires and drive to the village each day in their own LV (13 staff / 13 vehicles), and 50% of staff will travel to and from the SHRA village via bus (12 staff / 1 x 12 seat bus). Taking a conservative approach, we have assumed that all 14 staff related vehicle movements will access the SHRA village during the peak hour of workers movements, made up of 13 light vehicles and 1 bus.

The SHRA development will also generate bus trips as workers are transported between the site and the airport and vice versa. Forecast airport bus trips have been estimated based on the daily flight schedules of Qantas and Virgin Australia and are displayed in Table 2.

Table 2 Airport bus trips generated by the proposed development

Bus Direction	Time	Bus Direction	Time
Bus to airport from SHRA	6:30	Bus from airport to SHRA	11:30
	7:30		12:30
	9:30		13:30
	14:00		18:30
	16:00		19:30
			20:30

Airport buses are estimated to add a single bus trip to the peak morning and afternoon peak periods.

The development is estimated to generate a combined total of 78 vehicle movements (74 light vehicles and 4 buses) in the morning peak hour, between 5am and 6am, and a total of 79 vehicle movements (74 light vehicles and 5 buses) in the evening peak hour, between 6pm and 7pm.

Most vehicle movements into and out of the site will occur between 5am and 8am (primarily outbound vehicle movements) and 4pm and 7pm (primarily inbound vehicle movements). These vehicle movements will occur outside of the busier school hours periods for traffic movements to and from key local land uses including North Regional TAFE Pundulmurra South Hedland Campus and Hedland Senior High School – which typically occur between 8am and 3pm.

5.2 Trip Distribution

It is assumed all trips will approach and depart the site via Kennedy Street, Parker Street and North Circular Road. No traffic is expected to use Coppin Place or Stanley Street. Trips to/from North Circular Road will split depending on the likely origin and destination, with the most likely origin/destinations outlined as follows:

- Finucane Island BHP Port Operations, FMG Anderson Point and Utah Point 40% of worker trips
- BHP Nelson Point Operations and local businesses in the West End 35% of worker trips
- Boodarie 15% of worker trips
- Wedgefield and Lumsden Point 10% of worker trips
- Port Hedland Airport 100% of airport bus trips

The distribution of vehicle trips at North Circular Road is therefore estimated as:

- 55% of worker trips to/from North Circular Road west
- 45% of worker trips to/from North Circular Road east
- 100% of airport bus trips to/from North Circular Road east

5.3 Traffic Impact

The forecast increase in traffic along Kennedy Street, Parker Street and at the intersections of Parker Street with Kennedy Street and North Circular Road with Parker Street across a range of time periods is outlined in Table 3. These volumes are separated into light vehicles (LV) and buses. These increases are also shown in Figure 23 (for the AM peak hour) and Figure 24 (for the PM peak hour).

Amended on 1/7/2025

Table 3 Forecast additional traffic on surrounding streets generated by the proposed development

Road Section	Veh	5-6am	6-7am	7-8am	8-9am	9-10am	2-3pm	3-4pm	4-5pm	5-6pm	6-7pm
Kennedy St	LV	74	35	22	0	0	0	0	22	35	74
	Bus	4	3	2	0	1	1	0	2	2	5
Parker St	LV	74	35	22	0	0	0	0	22	35	74
	Bus	4	3	2	0	1	1	0	2	2	5
Kennedy St Right into Parker St	LV	74	35	22	0	0	0	0	0	0	0
	Bus	4	3	2	0	1	1	0	1	0	0
Parker St Left into Kennedy St	LV	0	0	0	0	0	0	0	22	35	74
	Bus	0	0	0	0	0	0	0	1	2	5
Parker St Left into NCR	LV	41	19	12	0	0	0	0	0	0	0
	Bus	2	1	1	0	0	0	0	0	0	0
Parker St Right into NCR	LV	33	16	10	0	0	0	0	0	0	0
	Bus	2	2	1	0	1	1	0	1	0	0
NCR West Right into Parker St	LV	0	0	0	0	0	0	0	12	19	41
	Bus	0	0	0	0	0	0	0	1	1	2
NCR East Left into Parker St	LV	0	0	0	0	0	0	0	10	16	33
	Bus	0	0	0	0	0	0	0	0	1	3

Peak hour traffic volumes on Kennedy Street (between the development crossovers and Parker Street) and Parker Street (between Kennedy Street and North Circular Road) are forecast to increase by 78 vehicles in the AM peak hour (74 light vehicles and 4 buses) and by 79 vehicles in the PM peak hour (74 light vehicles and 5 buses).

Peak hour traffic volumes on North Circular Road (to the west of Parker Street) are forecast to increase by 43 vehicles in both the AM and PM peak hour (41 light vehicles and 2 buses).

Peak hour traffic volumes on North Circular Road (to the east of Parker Street) are forecast to increase by 36 vehicles in both the AM and PM peak hour (33 light vehicles and 3 buses).

Amended on 1/7/2025

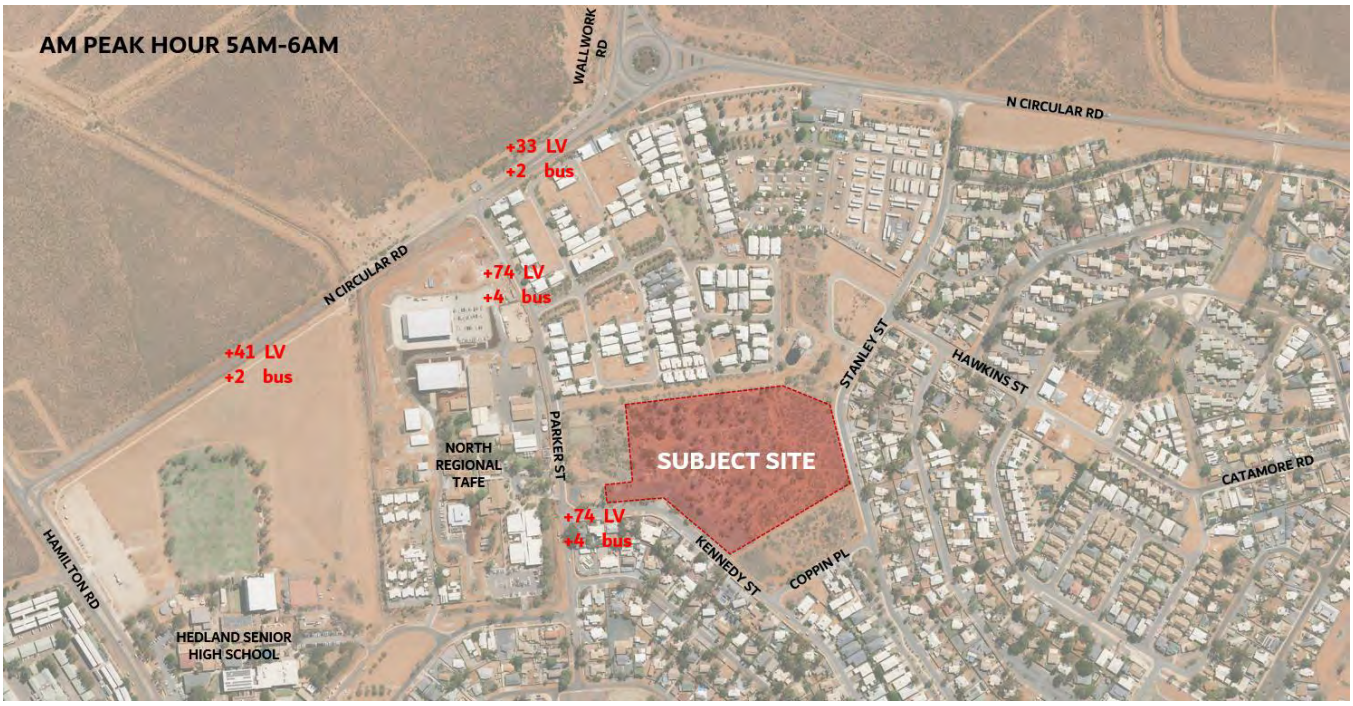

Figure 23 Forecast AM peak traffic volume increase resulting from development

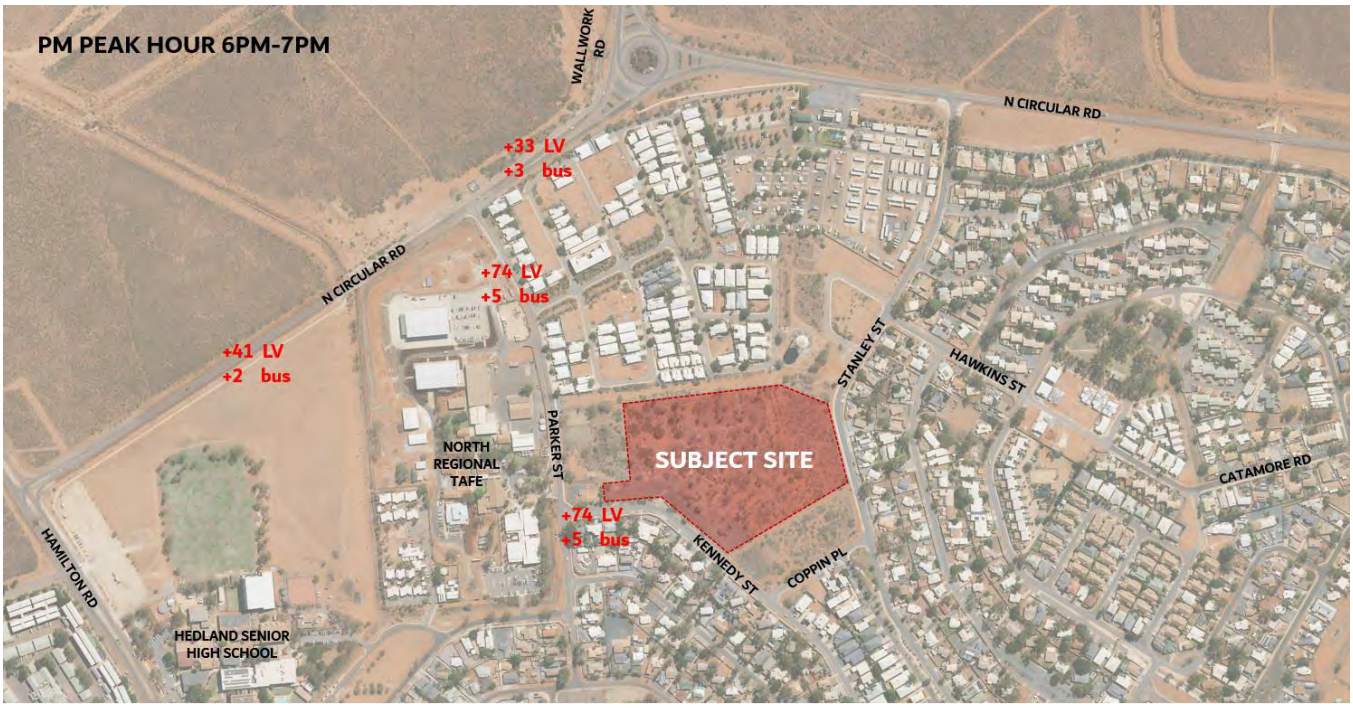

Figure 24 Forecast PM peak traffic volume increase resulting from development

The predicted increase in traffic volumes along Parker Street and North West Circular Road for the development peak and the road network peak hours are demonstrated in Table 4. Existing traffic volumes at the intersection of Parker Street with Kennedy Street were recorded on Tuesday June 24th 2025 as discussed in section 6.3.2.

Table 4 Forecast additional traffic and percentage increase on surrounding streets

Road Section	AM						PM					
	Development Peak (5-6am)			Network Peak (7:45-8:45am)			Development Peak (6-7pm)			Network Peak (4:15-5:15pm)		
	Vol	+	%	Vol	+	%	Vol	+	%	Vol	+	%
Parker Street (south of North Circular Rd)	120	+78	65%	248	+6	2.4%	224	+79	35%	239	+27	11.3%
North Circular Road (west of Parker St)	435	+43	9.9%	660	+3	0.5%	894	+43	4.8%	940	+15	1.6%
North Circular Road (east of Parker St)	501	+35	7.0%	822	+3	0.3%	1,010	+36	3.6%	1,069	+12	1.1%

The forecast increase in traffic volumes along Parker Street is relatively high in the development peak hours (with an increase of 65% between 5 and 6am and 35% between 6 and 7pm), but much lower in the road network peak hours. The forecast increase to North Circular Road traffic volumes is much lower given the higher volume of traffic carried by this road.

The performance of the intersection of Parker Street with Kennedy Street is discussed in section 6.3.2 (for existing volumes) and in section 7.1 (including forecast development traffic).

6. FRONTAGE STREETS

6.1 Road Hierarchy

The subject development site is located in the northern part of South Hedland, approximately 1.2km north of Soth Hedland town centre. Port Hedland is approximately a 16km drive (14 minutes) to the north of the subject site and Port Hedland International Airport is approximately an 8km (9 minute) drive to the northeast of the site.

The subject development site is largely a vacant lot containing scattered trees within parkland and low lying shrubs/grasses. Vehicle access to the subject development is proposed at two locations as follows:

- Retention of the previous vehicle crossover at the site along Kennedy Street – located approximately 125m to the east of the Parker Street/Kennedy Street intersection.
    - Retained crossover to provide two-way outbound vehicle access for light vehicles and buses (outbound bus movements only)
    - Retained left-in and left-out slip lane road widening to provide for the safe entry and exit of vehicles
- Creation of a new vehicle crossover at the site along the Kennedy Street frontage – located approximately 90m to the east of the Parker Street/Kennedy Street intersection.
    - New crossover to provide two-way vehicle access for light vehicles, service vehicles and buses (inbound bus movements only)

Access Roads: the subject site has frontage to Kennedy Street and Stanley Street – both streets are categorised as Access Roads under Main Roads WA Road Network Hierarchy. All roads within the immediate vicinity of the subject site are categorised as Access Roads. Access Roads are under the control of the Town of Port Hedland and provide direct access to development lots, including the subject site.

Local Distributor Roads: higher order roads in South Hedland include Hamilton Road (to the south of North Circular Road) and Cottier Drive as Local Distributor Roads. Local Distributor Roads are under the control of the Town of Port Hedland and link Regional Distributor Roads at the boundary of South Hedland to Access Roads.

Regional Distributor Roads: North Circular Road, Wallwork Road and Powell Road are all categorised as Regional Distributor Roads under Main Roads WA Road Network Hierarchy – with all the roads under the control of the Town of Port Hedland – these roads provide for strategic vehicle access between State controlled road corridor or between significant land uses such as South Hedland residential area and Wedgefield industrial area.

Primary Distributor Roads: Great Northern Highway and Wilson Street between Great Northern Highway and Port Hedland townsite/the port are categorised as Primary Distributor Roads under Main Roads WA Road Network Hierarchy – with these roads are under the control of Main Roads.

Great Northern Highway provides a critical State-wide connection between Perth and the central and northern parts of the State. Wilson Street provides a strategically important connection between Great Northern Highway and the port and port related activities.

The road hierarchy surrounding the subject site is shown in Figure 25.

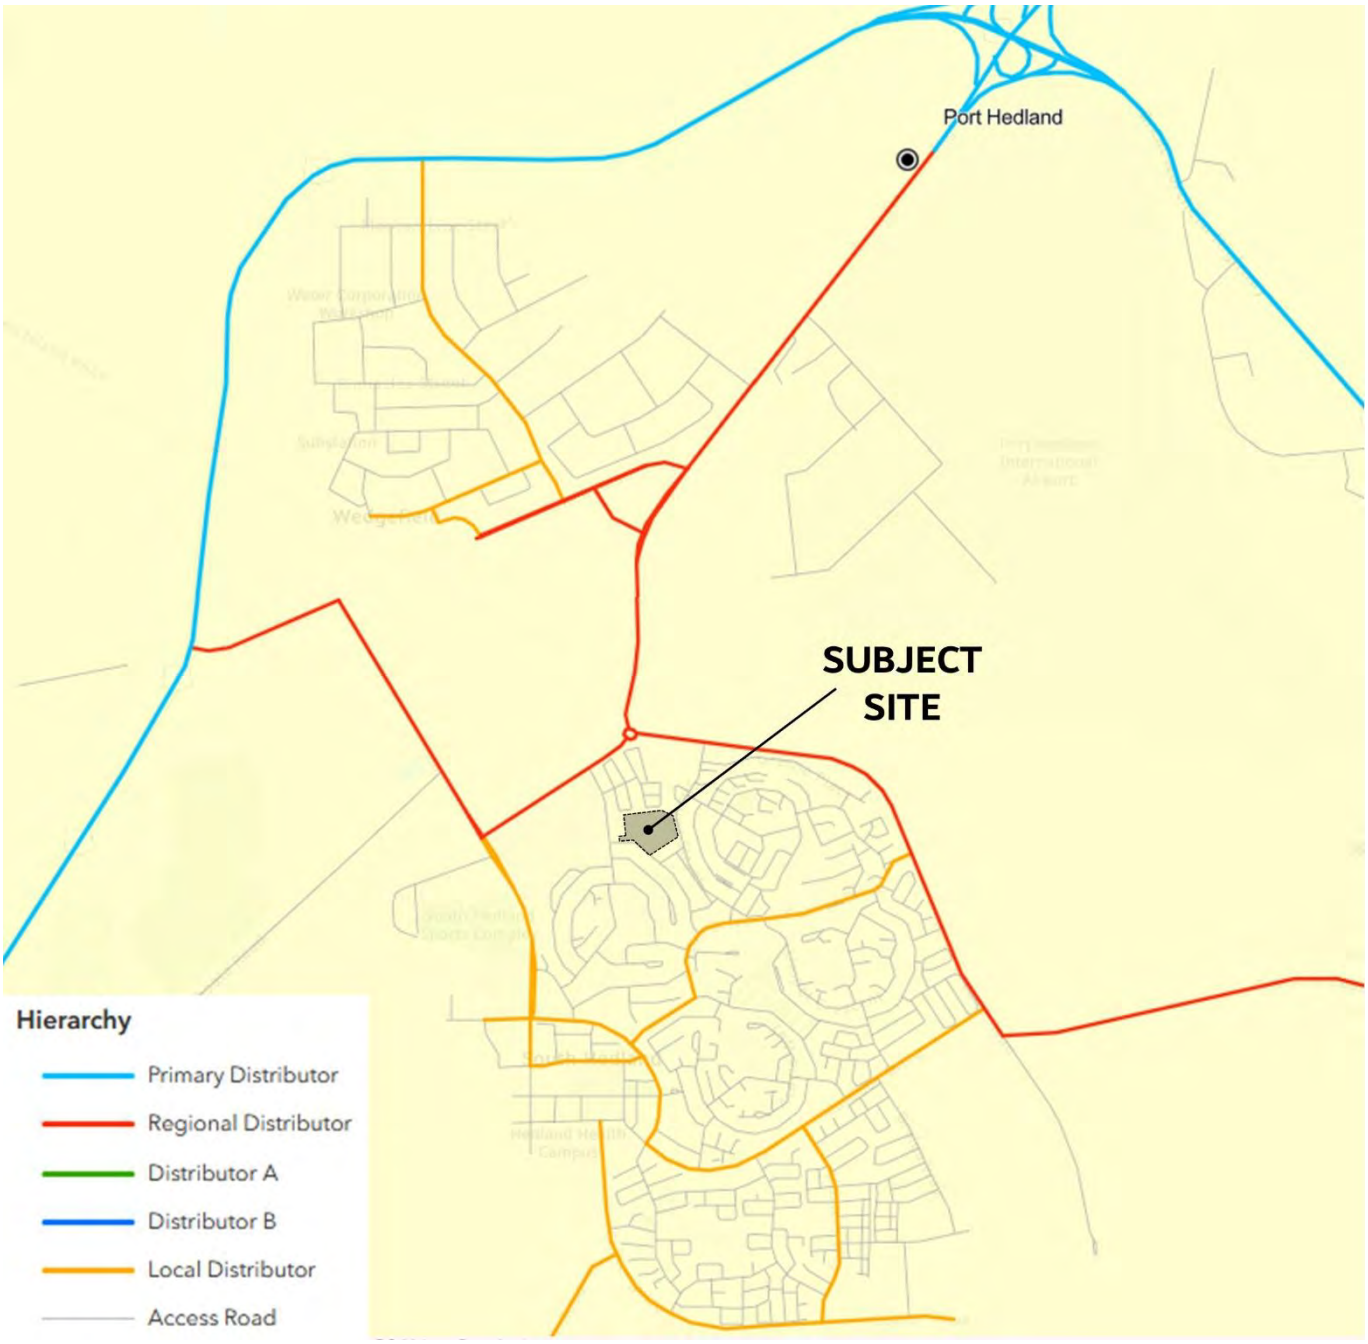

Figure 25 Road hierarchy surrounding the subject site (source: Main Roads WA)

6.2 Speed Limits

The subject site has frontage to Kennedy Street and Stanley Street – both streets operate under a default 50km/h speed limit for built up areas such as South Hedland. All roads within the immediate vicinity of the subject site operate under a default 50km/h speed limit of built up areas.

Higher order roads in South Hedland such as Hamilton Road (to the south of North Circular Road), Cottier Drive and Forrest Circle operate under a 60km/h posted speed limit.

Roads that make up South Hedland town centre operate under a reduced 40km/h posted speed limit to encourage slower vehicle speeds through the town centre and support walking and cycling trips to and across the town centre.

North Circular Road, Wallwork Road and Hamilton Road (to the north of North Circular Road) operate under an 80km/h posted speed limit.

Across the wider road network, Great Northern Highway to the west of Airport Road operates with an 80km/h posted speed limit and Great Northern Highway to the west of Buttweld Road operates with a 90km/h posted speed limit.

Wilson Street between Great Northern Highway and Port Hedland townsite is covered by sections of posted speed limit from 90km/h to 60km/h – with the posted speed limit on Wilson Street reducing the closer to the port – with the final section of Wilson Street providing direct access to the port operating with a posted speed limit of 25km/h.

The speed zoning surrounding the subject site is shown in Figure 26.

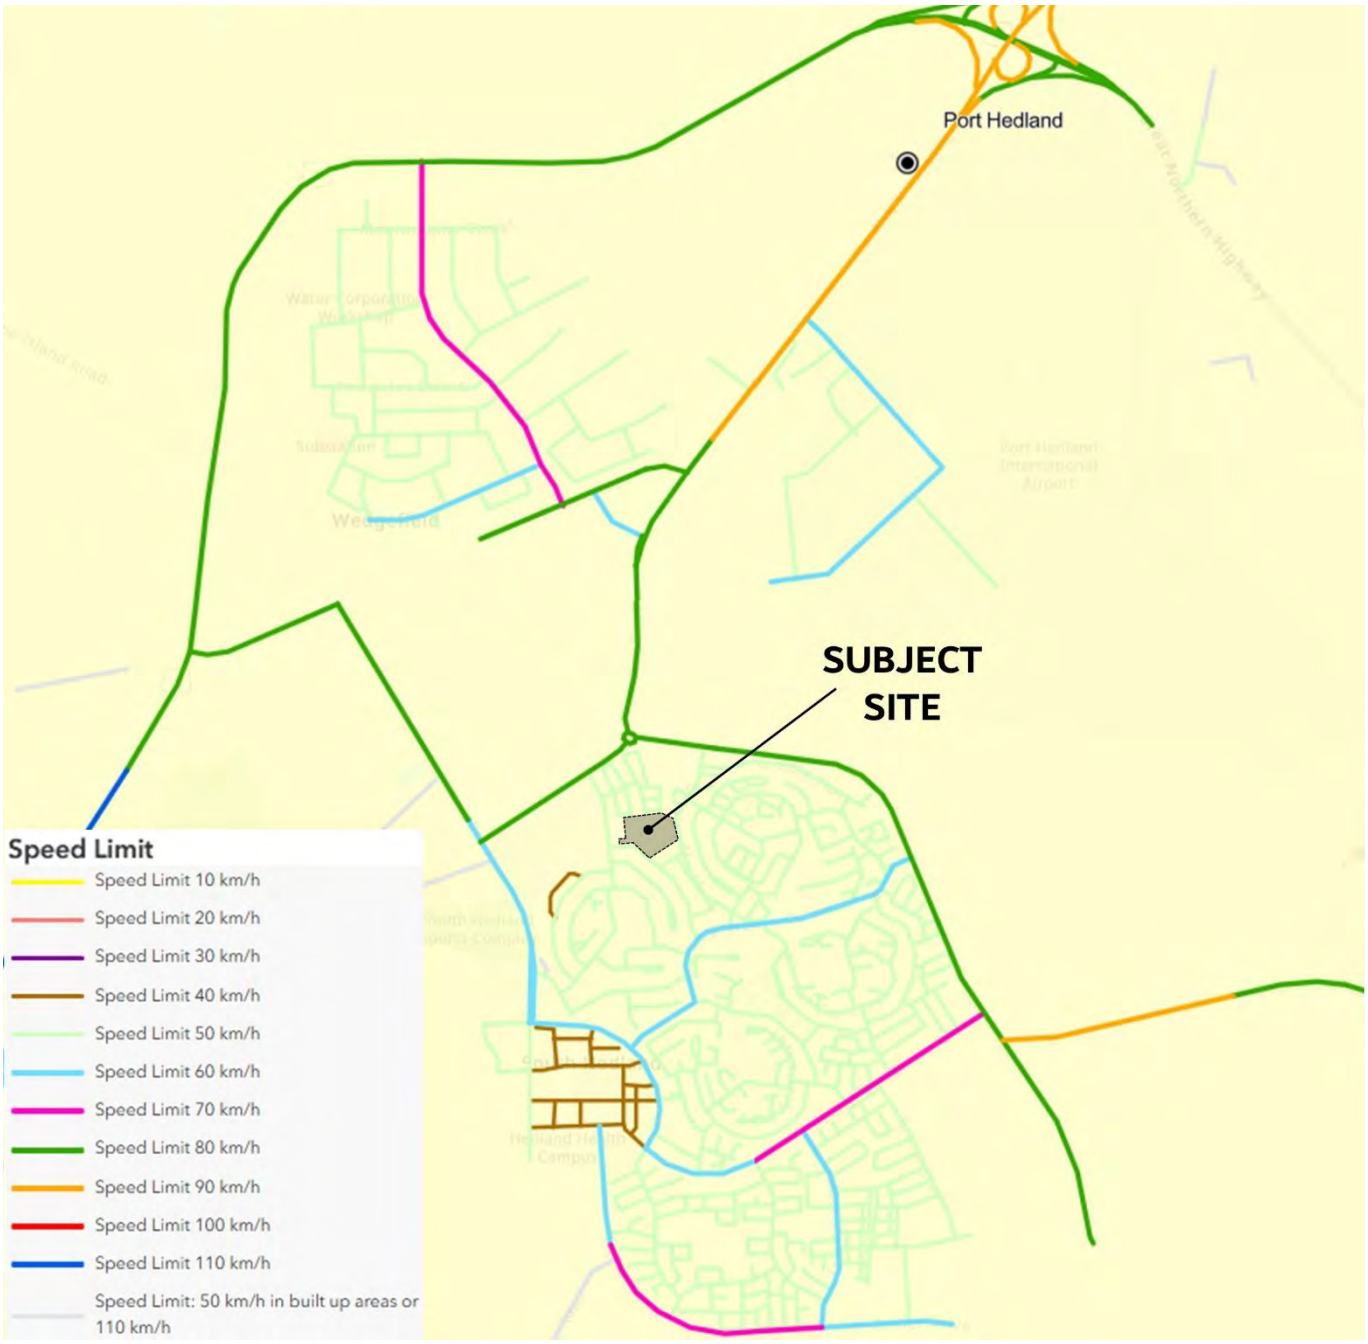

Figure 26 Speed zoning surrounding the subject site (source: Main Roads WA)

Amended on 1/7/2025

6.3 Road Layout

6.3.1 Kennedy Street and Parker Street

Figure 27 and Figure 28 show the existing road environment of Kennedy Street and Parker Street in vicinity of the subject site. The aerial image shows that Kennedy Street and Parker Street are undivided single carriageway roads – with one lane of traffic in each direction – with no centre line marking along the carriageway or at the intersection of Kennedy Street/Parker Street.

Kennedy Street has an approximate total carriageway width of 7.8m on approach to the Parker Street intersection and the carriageway widens along Kennedy Street to 10.5m – creating a left slip lane road widening on approach to the existing vehicle access to the site. A total carriageway width of approximately 10.5m is retained along Kennedy Street to the east of the site access – creating a left slip lane road widening on exit from the existing vehicle access to the site.

Figure 27 Existing Kennedy Street and Parker Street road environment (source: MetroMap)

Figure 28 Existing Kenney Street/Parker Street intersection – view from the northbound approach (source: Google Streetview)

6.3.2 North Circular Road and Parker Street

Figure 29 and Figure 30 show the existing road environment in the vicinity of the North Circular Road/Parker Street intersection – approximately 450m to the north/northwest of the subject site. The aerial image shows that Parker Street is an undivided single carriageway road – with one lane of traffic in each direction – with no centreline marking along the carriageway. The aerial image shows that North Circular Road is an undivided single carriageway road – with one lane of traffic in each direction – with a centreline road marking along North Circular Road and dashed give-way road marking on the Parker Street approach to the intersection but not give-way road sign.

Parker Street has an approximate total carriageway width of 11.0m on approach to the North Circular Road intersection. North Circular Road has an approximate total carriageway width of 11.0m to the east of the Parker Street intersection (toward the Wallwork Road roundabout) and an approximate total carriageway width of 8.5m to the west of the Parker Street intersection (towards Hamilton Road).

Figure 29 Existing North Circular Road and Parker Street road environment (source: MetroMap)

Figure 30 Existing North Circular Road/Parker Street intersection – view from the eastbound approach (source: Google Streetview)

Existing traffic volumes at the intersection of Parker Street with Kennedy Street were recorded on Tuesday June 24th 2025. Volumes were recorded every 15 minutes between 5am and 10am and then between 1pm and 6pm. Hourly summaries of these counts are shown in Table 5.

Amended on 1/7/2025

Table 5 Turning traffic volumes at Parker St / Kennedy St intersection as observed Tuesday June 25th, 2025

Approach movement		5-6am	6-7am	7-8am	8-9am	9-10am	1-2pm	2-3pm	3-4pm	4-5pm	5-6pm

	T	134	152	253	332	276	256	263	335	380	450

The existing performance of this intersection has been assessed using SIDRA Intersection 9.0 Plus version 9.0.3.9771. The assessment has been performed every hour between 5am and 10am and then between 2pm and 7pm.

SIDRA is a modelling tool that can be used to assess the performance of an individual intersection, or a network of intersections. The SIDRA models have been developed in accordance with Main Roads' Operational Modelling Guidelines. Models have been developed using intersection geometry measured from MetroMap, and speed limits and vehicle classification data from Main Roads WA.

The performance of an intersection is expressed as a level of service. Level of service ranges from A to F, where A is the highest level of performance (unimpeded traffic flow, minimal delay) and F is the lowest (high levels of congestion, extreme delays, demand exceeds capacity). The level of service designation is based on delay. The Highway Capacity Manual sets out the ranges of delay for each level of service, which differs slightly between signalised and non-signalised intersections, and is reproduced in Table 6.

Table 6 Level of Service Ranges for Signalised, Roundabout and Priority Controlled Intersections

Ranges of Delay for each Level of Service and Intersection Type (seconds)			
LoS	**Signalised**	**Roundabout**	**Give Way / Stop Sign**
A	0 - 10	0 – 10	0 - 10
B	10 - 20	10 – 20	10 - 15
C	20 - 35	20 – 35	15 - 25
D	35 - 55	35 – 50	25 - 35
E	55 - 80	50 – 70	35 - 50
F	80+	70+	50+

Vehicle classification data from Main Roads count sites 19328 (Parker Street south of North Circular Road) from 2022/2023 and 19330 (North Circular Road east of Hamilton Road) from 2019/2020 was applied to the traffic volumes to return the appropriate vehicle types for input to SIDRA. The hourly vehicle classifications are summarised in Table 7.

Table 7 Vehicle classification profiles from Main Roads count sites 19328 and 19330

	R	A	A	A	B	A	A	A	B	B	B
North Circular Road (east of Parker St)	L	A	A	A	A	A	A	A	A	A	A
	T	A	A	A	A	A	A	A	A	A	A

The average delay for the overall intersection and for each approach for the various time periods is summarised in Table 9.

Table 9 SIDRA predicted intersection delay - Parker St / Kennedy St intersection existing volumes

Approach	Average delay (s)									
	5-6am	6-7am	7-8am	8-9am	9-10am	2-3pm	3-4pm	4-5pm	5-6pm	6-7pm
Parker Street (south of North Circular Rd)	6.8	6.6	8.8	9.1	7.4	7.9	9.0	11.8	11.5	11.3
North Circular Road (west of Parker St)	0.2	0.3	0.7	0.6	0.8	0.7	0.9	1.1	1.6	1.6
North Circular Road (east of Parker St)	0.5	1.5	1.7	1.5	1.4	1.9	1.3	1.7	1.5	1.5
Overall Intersection	1.6	2.1	2.7	2.5	1.9	2.3	1.8	2.2	2.2	2.2

SIDRA predicts the intersection of Parker Street with Kennedy Street is currently operating well within its capacity, with the highest movement level of service B.

Amended on 1/7/2025

7. TRAFFIC IMPACT OF DEVELOPMENT

7.1 SIDRA Intersection Analysis

The forecast increase in traffic along Kennedy Street, Parker Street and at the intersections of Parker Street with Kennedy Street and North Circular Road with Parker Street across a range of time periods was outlined in Table 3. These volumes have been added to the existing intersection volumes for each time period.

The SIDRA predicted level of service for each turning movement at the intersection of Parker Street with Kennedy Street with forecast development traffic for the surveyed time periods is shown in Table 10. Detailed SIDRA output for these time periods is displayed in Appendix 2.

Table 10 SIDRA predicted intersection approach level of service - Parker St / Kennedy St intersection forecast volumes

Approach movement		5-6am	6-7am	7-8am	8-9am	9-10am	2-3pm	3-4pm	4-5pm	5-6pm	6-7pm
Parker Street (south of North Circular Rd)	L	A	A	A	A	A	A	A	A	A	A
	R	A	A	A	A	A	A	A	C	B	B
North Circular Road (west of Parker St)	T	A	A	A	A	A	A	A	A	A	A
	R	A	A	A	B	A	A	A	B	B	B
North Circular Road (east of Parker St)	L	A	A	A	A	A	A	A	A	A	A
	T	A	A	A	A	A	A	A	A	A	A

SIDRA predicts the addition of the development traffic will cause little change to the movement level of service at the intersection of Parker Street with Kennedy Street, with the highest movement level of service C.

The average delay for the overall intersection and for each approach for the various time periods is summarised in Table 11. The addition of the development traffic is predicted to increase overall intersection delay by 0.6 seconds in the AM peak and by 1.0 second in the PM peak.

Table 11 SIDRA predicted intersection delay - Parker St / Kennedy St intersection forecast volumes

Approach	Average delay (s)									
	5-6am	6-7am	7-8am	8-9am	9-10am	2-3pm	3-4pm	4-5pm	5-6pm	6-7pm
Parker Street (south of North Circular Rd)	6.6	6.6	8.8	9.1	7.5	8.0	9.1	12.4	11.9	12.1
North Circular Road (west of Parker St)	0.2	0.3	0.7	0.6	0.8	0.7	0.9	1.7	2.5	3.5
North Circular Road (east of Parker St)	0.5	1.5	1.7	1.5	1.5	1.9	1.3	1.8	1.7	1.9
Overall Intersection	2.2	2.4	2.9	2.5	1.9	2.3	1.8	2.5	2.7	3.2

8. PUBLIC TRANSPORT ACCESS

The subject site is somewhat accessible by public transport services, however the nature of the proposed worker accommodation village for the subject site is not reliant on workers or staff to access the site by public transport and is unlikely to be a land use that generates many public transport related trips. However, locally hired staff may use public transport to access the site due to the close proximity of bus stops to the site.

The subject site is conveniently located for bus services between the site and South Hedland Shopping Centre. Bus stops located on Parker Street adjacent to the North Regional TAFE Pundulmurra South Hedland Campus, are a 180m walk from the subject site.

The Parker Street bus stops are served by Bus Route 870. Details of the bus route are outlined below.

- Bus Route 870
    - Bus route 870 operates between South Hedland – Port Hedland via Port Hedland Boulevard Shopping Centre, Pretty Pool and Cooke Point.
    - Weekday bus services operate between 8.30am and 5pm – operating 6 services a day.
    - Saturday bus services operate between 9.30am and 3pm – operating 4 services a day.
    - Sundays and public holidays there are no services.

For completeness of assessment, the other public transport services in South Hedland are outlined below.

- Bus Route 871 and 872
    - Bus route 871 and 872 operate a clockwise and anticlockwise bus route around South Hedland via Throssell Road, Stanley Street, Paton Road, Brolga Way and Steamer Avenue.
    - Weekday bus services operate between 8am and 6pm – operating 5 services in each direction a day.
    - Saturday bus services operate between 8am and 4pm – operating 3 services in each direction a day.
    - Sundays and public holidays there are no services.

Figure 31 shows the roads across Port Hedland and South Hedland along which public bus routes operate – and Figure 32 shows the sections of the roads across Port Hedland and South Hedland along which public bus route operate and which roads form Bus Route 870 and Bus Route 871/872.

9. PEDESTRIAN AND BICYCLE ACCESS

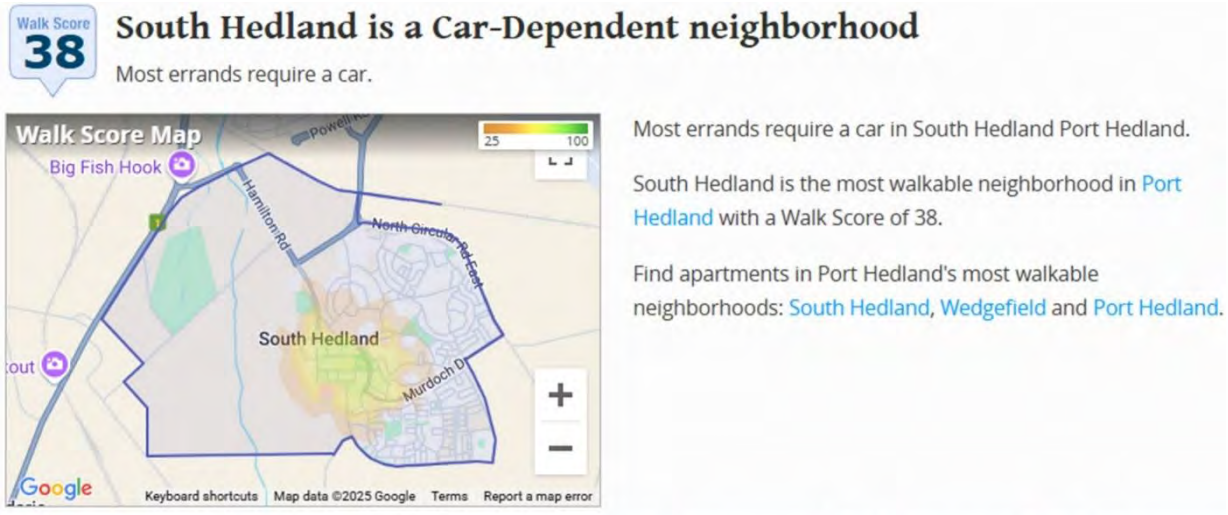
The nature of the proposed worker accommodation village for the subject site is not reliant on workers or staff to access the site on foot or on bicycle by the local path network, and the proposed land use is unlikely to generates significant pedestrian or bicycle trips to/from the site.

The following measures will be taken to support bicycle trips to/from the site:

- U-rail bike racks will be installed adjacent to the Dining Hall Building – x5 bike racks will be installed at the front of the building and x5 bike racks will be installed at the rear of the building.
- Staff riding to the site will be able to park their bike in the bike racks adjacent to the Dining Hall Building – staff will also have access to use the male and female shower facilities and lockers in the on-site gymnasium.
- Townhouse rooms will be leased on a 12 monthly basis and residents will have access to a ground floor store room with each townhouse to store a personal bicycle.
- The operator of the site is considering operating a small fleet of bicycles that would be available for use by workers staying in transient workers rooms or townhouse rooms, for workers to access locations around South Hedland in their leisure time. Fleet bikes would be stored in the sea container storage unit adjacent to the outdoor gym.

The majority of streets within South Hedland in proximity of the subject site include paths on one side of the street. The Walk Score walkability assessment tool considers South Hedland to be a "car-dependent" location where "most errands require a car". In Figure 33 the Walk Score data is provided for the neighbourhood of South Hedland – in addition an overview is provided for both Wedgefield and Port Hedland.

The Walk Score data shows that the neighbourhood of South Hedland has a higher walk score compared to both Wedgefield and Port Hedland – with South Hedland scoring 38 out of 100.



Rank	Name	Walk Score	Transit Score	Bike Score	Population
1	South Hedland	38	-	-	9,392
2	Wedgefield	30	-	-	637
3	Port Hedland	25	-	-	3,773

Figure 33 Walk Score walkability assessment for South Hedland, Wedgefield and Port Hedland (source: Walk Score)

A 20 minute walk catchment and 10 minute cycling catchment from the subject site have been mapped using the Planwisely geospatial analytics platform – the catchments are shown in Figure 34.

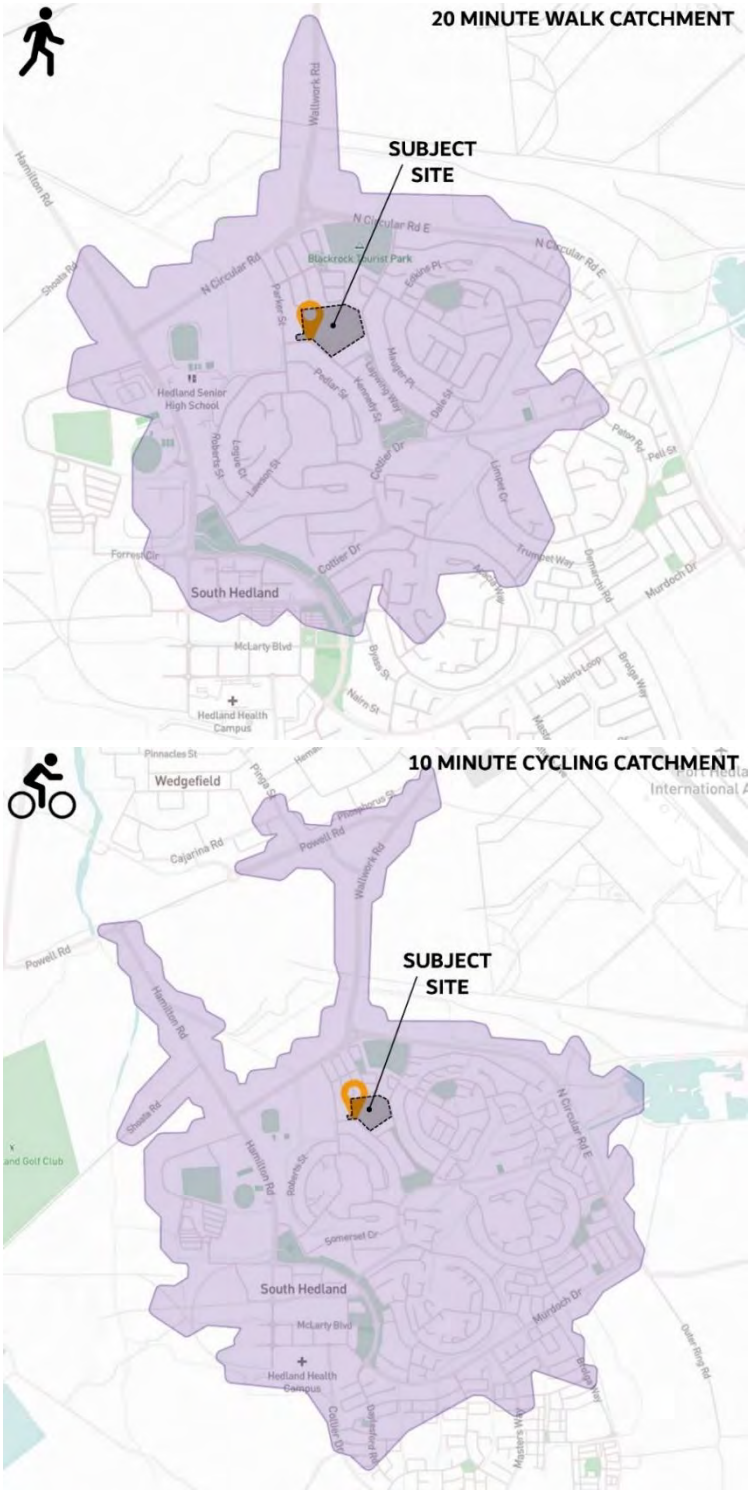


Figure 34 20 minute walk catchment and 10 minute cycling catchment from the subject site (source: Planwisely)

Within a 20 minute walk of the subject site, residents in the workers accommodation would be able to access South Hedland Shopping Centre, Wanangkura Stadium and adjacent Kevin Scott Oval.

Within a 10 minute ride of the subject site, residents in the workers accommodation would be able to access all destinations across South Hedland to the north of Murdoch Drive – including Hedland Health Campus, South Hedland Shopping Centre, Wanangkura Stadium and adjacent Kevin Scott Oval.

Separate heatmaps of walking and cycling activity across South Hedland are shown in Figure 35.

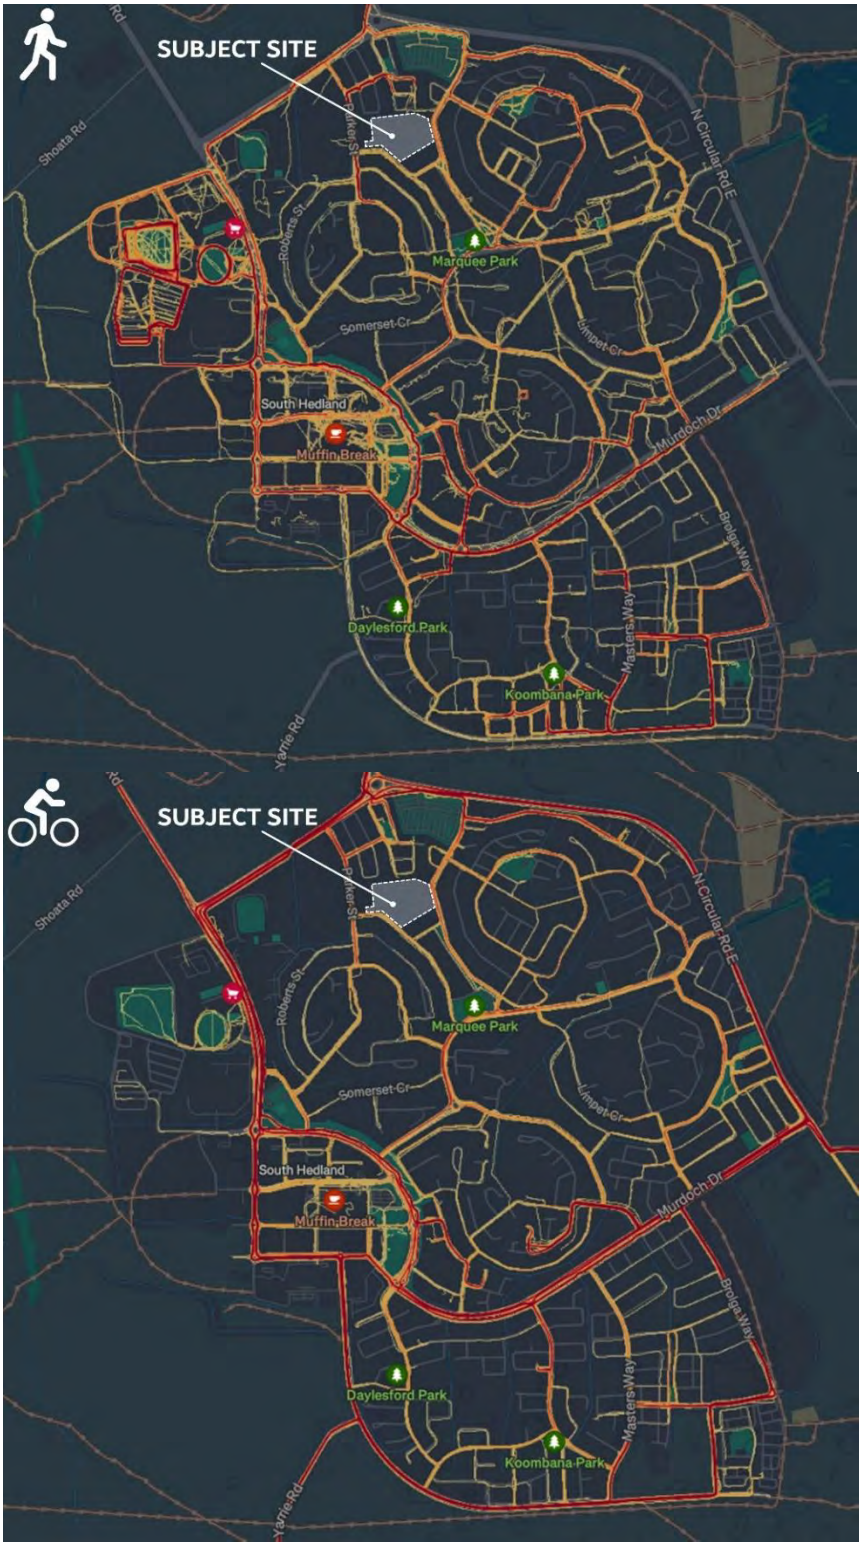

Figure 35 Strava heatmap of walking and cycling activity across South Hedland (source: Strava)

The heatmaps show that there is local walking and cycling activity across the local street network in South Hedland – with most walking activity across sporting ovals around South Hedland and South Hedland Shopping Centre – and most cycling along the main local distributor roads within South Hedland.

Amended on 1/7/2025

10. SAFETY ISSUES

10.1 Crash History

In the five-year period ending December 2024 there were 15 reported crashes on the road network surrounding the subject site within the analysis boundary shown in Figure 36. The figure shows the location of each reported crash in proximity of the subject site, and the accompanying table provides details on the severity of each reported crash. The data for the 15 reported crashes within the analysis boundary can be broken down as follows:

- Level 5 - Crash with fatality = no crashes
- Level 4 - Crash requiring hospital treatment = 2 crashes
- Level 3 - Crash requiring medical treatment = 1 crash
- Level 2 - Crash with major property damage = 8 crashes
- Level 1 - Crash with minor property damage = 4 crashes

Both crashes requiring hospital treatment occurred along North Circular Road – one crash involved a vehicle hitting an object on the road and one crash was at the intersection of Parker Street/North Circular Road, which a child was struck when scootering across the road at the intersection.

The two nearest crashes to the proposed vehicle access to the subject site are the two crashes at the intersection of Parker Street/Pedlar Street and Kennedy Street/Coppin Place. All three crashes at these intersections resulted in a right angle collision between a turning vehicle and a vehicle travelling straight through. In all cases these accidents occurred in daylight in dry conditions and the sites were noted as having good visibility.

Figure 36 Intersection reported crash summary for five-year period ending December 2024 (source: Main Roads WA)

There have been no reported crashes at the intersection of Parker Street/Kennedy Street over the five-year period ending December 2024 – which suggests this intersection is operating safely.

Amended on 1/7/2025

11. SUMMARY AND CONCLUSIONS

11.1 Development Proposals

This Transport Impact Assessment (TIA) has been prepared by Flyt in support of the proposed South Hedland Regional Accommodation (SHRA) development – set to become the 'accommodation of choice' in the Port Hedland region.

The accommodation village will provide worker accommodation situated in the northern part of South Hedland, approximately 1.2km north of Soth Hedland town centre.

The development proposals are summarised as comprising:

- 297 rooms to accommodate workers
    - 248 standard rooms
    - 45 townhouse rooms
    - 4 universal access rooms
- Associated worker accommodation facilities
    - Administration and convenience shop building
    - Recreation building
    - Gymnasium and transit building
    - Dining hall building
    - Outdoor gym, tennis/basketball court and pool
    - Undercover and outdoor areas featuring BBQ facilities
    - Maintenance, storage and linen shed
- 146 light vehicle parking bays
    - 96 standard light vehicle parking bays – for standard room workers
    - 30 standard light vehicle parking bays – for townhouse room workers
    - 2 universal access parking bays – for universal access room workers
    - 18 standard light vehicle parking bays – for accommodation village operator/staff parking
- Bus pick-up / drop-off area – to accommodate 2 buses

11.2 Traffic Volumes

It is expected that the peak hour vehicle trip generation for the worker activity across the site would be approximately 64 vehicle trips during the AM and PM peak hours, made up of 61 light vehicles and 3 buses.

In addition to the worker activity, approximately 25 staff will be required to operate the SHRA village site. It is estimated that 50% of staff will be local hires and drive to the village each day in their own LV (13 staff / 13 vehicles), and 50% of staff will travel to and from the SHRA village via bus (12 staff / 1 x 12 seat bus). Taking a conservative approach, we have assumed that all 14 staff related vehicle movements will access the SHRA village during the peak hour of workers movements, made up of 13 light vehicles and 1 bus.

Airport buses are estimated to add a single bus trip to the peak morning and afternoon peak periods.

The development is estimated to generate a combined total of 78 vehicle movements (74 light vehicles and 4 buses) in the morning peak hour, between 5am and 6am, and a total of 79 vehicle movements (74 light vehicles and 5 buses) in the evening peak hour, between 6pm and 7pm.

Forecast trips to and from the site have been distributed according to most likely origin and destinations.

Peak hour traffic volumes on Kennedy Street (between the development crossovers and Parker Street) and Parker Street (between Kennedy Street and North Circular Road) are forecast to increase by 78 vehicles in the AM peak hour (74 light vehicles and 4 buses) and by 79 vehicles in the PM peak hour (74 light vehicles and 5 buses).

Peak hour traffic volumes on North Circular Road (to the west of Parker Street) are forecast to increase by 43 vehicles in both the AM and PM peak hour (41 light vehicles and 2 buses).

Peak hour traffic volumes on North Circular Road (to the east of Parker Street) are forecast to increase by 36 vehicles in both the AM and PM peak hour (33 light vehicles and 3 buses).

The forecast increase in traffic volumes along Parker Street is relatively high in the development peak hours (with an increase of 65% between 5 and 6am and 35% between 6 and 7pm), but much lower in the road network peak hours. The forecast increase to North Circular Road traffic volumes is much lower (less than 10% for every time period) given the higher volume of traffic carried by this road.

The performance of the intersection of Parker Street with North Circular Road has been assessed using SIDRA Intersection. SIDRA predicts the addition of the development traffic will cause little change to the movement level of service at the intersection of Parker Street with Kennedy Street, with the highest movement level of service C. The addition of the development traffic is predicted to increase overall intersection delay by 0.6 seconds in the AM peak and by 1.0 second in the PM peak.

Note: the operators of the proposed development would be pleased to work with the Town of Port Hedland to agree to an operational traffic management plan to re-route traffic movements to and from the proposed development if required.

For example, if the Town of Port Hedland preferred to more evenly distribute the traffic movements to and from the proposed development between the Parker Street/North Circular Road intersection and the Stanley Street/North Circular Road intersection – then bus movements and service vehicle movements could be instructed to access the site via Wallwork Road-North Circular Road-Parker Street-Kennedy Street and depart the site via Kennedy Street-Coppin Place-Stanley Street-North Circular Road-Wallwork Road – to more evenly distribute traffic movements and ensure all large vehicle were left turning vehicles at intersection and remove the requirement for large vehicle to perform right turn movements.

The operator of the site would be please to work with the Town of Port Hedland to reach an agreed preferred operational traffic management plan.

11.3 Vehicle Access and Parking

Vehicle access to the subject development is proposed at two locations along the Kennedy Street frontage of the site. One site access is via the retention of the previous vehicle crossover into the site, and the second site access is via a new crossover into the site.

The proposed crossovers can be described as follows:

- Retention of the previous vehicle crossover at the site along Kennedy Street – located approximately 125m to the east of the Parker Street/Kennedy Street intersection.
    - Retained crossover to provide two-way outbound vehicle access for light vehicles and buses (outbound bus movements only)
    - Retained left-in and left-out slip lane road widening to provide for the safe entry and exit of vehicles
- Creation of a new vehicle crossover at the site along the Kennedy Street frontage – located approximately 90m to the east of the Parker Street/Kennedy Street intersection.
    - New crossover to provide two-way vehicle access for light vehicles, service vehicles and buses (inbound bus movements only)

The proposed development of the subject site includes the following on-site parking provision:

- 146 light vehicle parking bays
    - 96 standard light vehicle parking bays – for standard room workers
    - 30 standard light vehicle parking bays – for townhouse room workers
    - 2 universal access parking bays – for universal access room workers
    - 18 standard light vehicle parking bays – for accommodation village operator/staff parking
- Bus pick-up / drop-off area – to accommodate 2 buses

11.4 Public Transport Access

The subject site is somewhat accessible by public transport services, however the nature of the proposed worker accommodation village for the subject site is not reliant on workers or staff to access the site by public transport and is unlikely to be a land use that generates many public transport related trips. However, locally hired staff may use public transport to access the site due to the close proximity of bus stops to the site.

The subject site is conveniently located for bus services between the site and South Hedland Shopping Centre. Bus stops located on Parker Street adjacent to the North Regional TAFE Pundulmurra South Hedland Campus, are a 180m walk from the subject site.

11.5 Pedestrian and Bicycle Access

The nature of the proposed worker accommodation village for the subject site is not reliant on workers or staff to access the site on foot or on bicycle by the local path network, and the proposed land use is unlikely to generates significant pedestrian or bicycle trips to/from the site.

The following measures will be taken to support bicycle trips to/from the site:

- U-rail bike racks will be installed adjacent to the Dining Hall Building – x5 bike racks will be installed at the front of the building and x5 bike racks will be installed at the rear of the building.
- Staff riding to the site will be able to park their bike in the bike racks adjacent to the Dining Hall Building – staff will also have access to use the male and female shower facilities and lockers in the on-site gymnasium.
- Townhouse rooms will be leased on a 12 monthly basis and residents will have access to a ground floor store room with each townhouse to store a personal bicycle.
- The operator of the site is considering operating a small fleet of bicycles that would be available for use by workers staying in transient workers rooms or townhouse rooms, for workers to access locations around South Hedland in their leisure time. Fleet bikes would be stored in the sea container storage unit adjacent to the outdoor gym.

The majority of streets within South Hedland in proximity of the subject site include paths on one side of the street. The Walk Score walkability assessment tool considers South Hedland to be a "car-dependent" location where "most errands require a car"

- Within a 20 minute walk of the subject site, residents in the workers accommodation would be able to access South Hedland Shopping Centre, Wanangkura Stadium and adjacent Kevin Scott Oval.
- Within a 10 minute ride of the subject site, residents in the workers accommodation would be able to access all destinations across South Hedland to the north of Murdoch Drive – including Hedland Health Campus, South Hedland Shopping Centre, Wanangkura Stadium and adjacent Kevin Scott Oval.

11.6 Conclusions

The findings of this Transport Impact Assessment (TIA) have not identified any transport issues resulting from the proposed form of development across the subject site, nor the proposed access arrangements for the site.

Site Level of Service (LOS) Method: Delay (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Vehicle movement LOS values are based on average delay per movement.
Minor Road Approach LOS values are based on average delay for all vehicle movements.
NA: Intersection LOS and Major Road Approach LOS values are Not Applicable for two-way sign control since the average delay is not a good LOS measure due to zero delays associated with major road movements.
Delay Model: SIDRA Standard (Geometric Delay is included).
Queue Model: SIDRA Standard.
Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Executive Summary

Grounded Construction Group (Grounded) are seeking Development Application (DA) approval from the Town of Port Hedland (the Town) for the development of a new Grounded, owned and operated workers accommodation facility: the South Hedland Regional Accommodation Development (the SHRA Development).

The proposed SHRA Development site is on a land parcel of approximately 5.1 ha at Lot 51 Kennedy Street in South Hedland, the site of the old BHP Pundulmurra Workers Camp that was established in the mid 1990's and decommissioned over the period 2008 to 2015.

The figure below shows the location of Lot 51 overlayed with the proposed development, bounded by Parker Street (opposite the North Regional TAFE), Kennedy Street, Coppin Place and Stanley Street.

ES Figure 1: SHRA Development Location

Grounded contracted Circle Advisory Pty Ltd (Circle)[1] to undertake a Social Impact Assessment (SIA) about the SHRA Development and to provide recommendations for a plan to manage any social

[1] Circle is an independent consultant in socio-economic and cultural impact management and has previously prepared SIAs for two other TWAs in Port Hedland since 2021. These were prepared to support the management of the identified impacts and to support the associated DAs. One of these was for a new facility and one for an existing facility. In addition, Circle has provided SIA services for the Kariyarra Aboriginal Corporation relating to mining developments in the Pilbara hinterland within their Native Title Determination Area (NTDA).

impacts that might arise from the development. This document is the SIA Report, and it includes a framework Social Impact Management Plan (SIMP) for the consideration of Grounded and inclusion in their Construction Management Plan (CMP) and Operations Management Plan (OMP) and any other relevant project plans for the SHRA Development.

The nature and scale of the project is described in **1 Project Description**.

Policy Context

The Town has three (3) policy instruments that are applicable to Grounded's DA and the requirements for a Social Impact Assessment (SIA):

- Transient Workforce Accommodation Strategy (2014)
- *Local Planning Policy 05 – Workforce Accommodation (LPP/05)*
- *Local Planning Policy 06 – Social Impact Assessment (LPP/06)*

In the Town's policy terms, workforce accommodation facilities such as the SHRA Development are called Transient Workforce Accommodation (TWA) in keeping with the notion that they are for temporary and transitional use.

The ultimate decision maker is the Regional Development Assessment Panel (RDAP) comprising a panel of experts, the Department of Lands, Planning and Heritage (DPLH) and Town representatives.

These are discussed in **2 Policy and Regulatory Context**.

Relevant Grounded policies are discussed in **3 Grounded Policies and Procedures.**

SIA Methodology

The Circle SIA methodology considers socioeconomic and cultural impacts, risks and opportunities and is explained in **4 Circle SIA Practice and Methodology**.

Risks and Opportunities are explored in this SIA within the following thematic areas:

- Community Health, Wellbeing and Amenity – that is concerned with impacts on resident and community health; crime and public safety; community services, facilities and infrastructure; and community amenity; and housing and accommodation.

- Culture and Society – that is concerned with Aboriginal and local culture; demographic changes; community values, identity and cohesion.

- Local Economic Participation – that is concerned with employment and training; local business contracting; and Aboriginal employment, training and business participation.

The themes can be considered as part of a circle of mutually supportive and interactive concepts that can create sustainable community development in a local society as shown in the figure below.

It is important to recognise and understand that there are cross cutting issues within the above themes and that various strategies, plans and activities will need to be developed to manage both risk and opportunity, in an adaptive fashion as time progresses.

In developing this SIA, Circle facilitated a multidisciplinary scoping workshop with Grounded in November 2024. From this workshop, preliminary desktop research, documentary review and the initial application of Circle's SIA methods a SIA Scoping Study was developed to inform this SIA, including further research required and the stakeholders to be consulted.

In parallel, Grounded has carried out its own stakeholder engagement for the SHRA Development, the outputs of which have also helped in the preparation of this SIA.

The stakeholder engagement methodology is explained in **5 Community and Stakeholder Engagement** and the stakeholder analysis undertaken for the development is in **6 SHRA SIA Stakeholder Analysis and Engagement.**

More than 70% of the stakeholders identified gave of their time to participate in the consultations and so the information and insights obtained were rich and deep. The stakeholder engagement undertaken was of a level that was sufficient to ensure that no new issues, concerns or aspirations would likely to have been raised if the consultation continued any further.

The boundaries that apply to this SIA from a social and statistical; geographical and administrative; temporal and contextual perspective, as well as commentary on town development, TWA and Short Term Accommodation (STA) impacts and expected concurrent proposed developments are set out in **7 SHRA SIA Boundaries**.

Kariyarra people are introduced as the Traditional Owners (TOs) for Port Hedland in **8 Kariyarra People** along with the other Aboriginal and Torres Strait Islander (ATSI) people resident in South Hedland at the 2021 Census. The social baseline for this SIA set out in **9 Social Baseline** was

commenced with desktop research and was then enhanced with information as the SIA progressed and stakeholders were consulted.

The Social Baseline covers population and demographics; Aboriginal and Torres Strait Islander (ATSI) and cultural diversity; educational attainment; employment and the labour force; ATSI employment and labour force participation, occupation and industry; incomes; housing and accommodation; the housing market; TWA and STA; transport infrastructure; health services; sporting groups and community service organisations; and crime.

Primary Matters Considered

The primary matters identified and considered in the preparation of this SIA include:

- Community amenity – the impact of SHRA Development operations on community amenity through SHRA Development residents' use, or lack thereof, of local facilities and infrastructure (built and natural) and the use of community services.

- Community health: – the impact of SHRA Development:

    - construction activities on surrounding residents through noise, odours and dust during construction and noise during operations; and,

    - operations activities on individuals and families in the local community through uncontrolled interaction with SHRA Development residents.

- Economic Benefit – to the local community and economic from the use of local goods, services and labour during both construction and operations phases.

- Housing and Accommodation – the impact of the SHRA Development:

    - on local residential housing market in terms of availability and affordability in the context of an abnormal accommodation market, particularly for non-resource sector workers, community and essential service workers; and,

    - on available and affordable Short-Term Accommodation (STA) for non-resource sector workers, particularly visiting professionals associated with the community services sector.

- Kariyarra people – the recognition of Kariyarra people as the Traditional Aboriginal Owners (TOs) and Common Law Native Title Holders of the land on which South Hedland is located and their socio-economic and cultural participation in the SHRA Development.

- Political participation – the extent to which stakeholders can participate in decisions that affect their lives, and the resources provided for this purpose, i.e., their actual ability to participate in the decision making about the SHRA Development as well as their perceptions of this.

- Security and safety – protection of the SHRA Development and residents from opportunistic crimes against property, and the avoidance of increased offending and so any consequential impacts on offenders and their families through interaction with the justice system.

- Social cohesion – the impact of SHRA Development operations on social cohesion because of negative or positive social interaction, or lack thereof, between the residents of the SHRA Development and the people that live in South Hedland.

- Social inclusion and integration – optimising social integration of the SHRA Development and its residents with the community of South Hedland.

- Traffic – the impact that increased construction and operations traffic may have in the local area, particularly in Parker and Kennedy Streets and during the peak usage times of 7.00am and 9.00am, and 3.00pm and 5.00pm.

Each of the above matters are discussed in the body of the report both in terms of the risks that they represent but also the attendant opportunities that may arise from the SHRA Development.

The SIA notes that should the SHRA Development not eventuate then the likelihood of the land being developed for residential housing in the present context is very low and the input to the Hedland economy of the proposed capital and operating expenditure will be foregone.

Main Impacts: Risks and Opportunities

The SHRA Development does provide an opportunity to make a significant contribution toward social and economic conditions in South Hedland and while there are some risks of detrimental impact which are manageable, these could be outweighed by the positive opportunities, if Grounded, in collaboration with others, takes the appropriate steps to enhance these.

In summary the greatest beneficial impacts that the SHRA Development could make to the South Hedland community are:

1. The provision of affordable short- and long-term accommodation for Essential Service Workers (non-resource sector workers) and visitors, particularly for:
    a. short term accommodation for visiting professionals in the areas of childcare, community safety and policing, education, health, and for the NFP sector; and,
    b. long term accommodation for Essential Service workers.
2. The training and employment of local people during construction and operations, including through contracting local and Aboriginal businesses.
3. Planned social interaction between the SHRA Development and the local community.
4. Recognition and involvement of Kariyarra people.

Conversely, the greatest detrimental impacts that the SHRA Development could have in the South Hedland community might be:

1. That the SHRA Development becomes another sole resource industry TWA and is not transitioned to a permanent residential estate as planned and does not contribute to the provision of affordable short- and long-term accommodation for Essential Service Workers.
2. That the SHRA Development operations do not contribute to social inclusion and the development of community in South Hedland and that this results in the perpetuation of poor perceptions of Fly in Fly Out (FIFO) workers by townspeople and of townspeople by FIFO workers and consequent negative relations between the two.
3. That the construction and operations activities of the SHRA Development fail to realise the opportunities for the use of local goods services and labour, e.g., through training and employment and using local businesses.
4. That the management of security and community interaction is not done appropriately and that this results in an increase in opportunistic property crime and the consequent adverse and long-term impacts on the lives and prospects of offenders and their families.
5. That Kariyarra people's status as the TOs of the Hedland area and their culture are not recognised and given appropriate treatment in the design and management of the SHRA Development and this perpetuates negative perceptions of Kariyarra people and Aboriginal people more generally in society.

A summary of the risks and opportunities is provided in **10 Impact Assessment,** and each is discussed in detail in the relevant theme areas:

- **11 Community Health, Wellbeing and Amenity**
- **12 Culture and Society**
- **13 Local Economic Participation**

A specific section discussing the approach to the socioeconomic and cultural participation of the Kariyarra people is set out in **14 Kariyarra Community Involvement**.

Matters Out of Scope

It should also be understood that there are many matters that are identified and raised while preparing a SIA that are beyond the control and influence of the proponent of the project in question or are not warranted given the scale and nature of the development.

For example, this SIA does not include the direct and indirect economic impacts of the SHRA Development in terms of its economic contribution to the local, State and Australian economy except where relevant corollaries are evident and reported by organisations qualified in economic impact assessment.

There are very often broader matters that cannot be addressed through SIA, in this case for example, such matters as the impacts of FIFO and DIDO work arrangements on housing and the sustainable development of regional communities such as South Hedland. Notwithstanding, a significant amount of attention has been given in this SIA to housing and accommodation and the TWA and STA market as this was the issue of greatest concern raised by all stakeholders.

Similarly, this SIA does not seek to analyse and respond to the nature of social inclusion and harmony within South Hedland. That is, the relations between FIFO and DIDO workers and the local community on the one hand, and relations between non-Aboriginal FIFO and DIDO workers, and the non-Aboriginal local community and the Aboriginal community on the other.

These are all matters beyond the scope of this SIA.

Social Impact Management Plan

In the first instance and as a matter of first principle, there are management measures that Grounded will need to have in place to effectively manage the socioeconomic and cultural risks and opportunities that have been identified, some of which already exist at Grounded's corporate level and at the project management level, e.g., Grounded's standard Construction Management Plan (CMP) and standard Operational Management Plan (OMP). Others will require some review and perhaps creation at Grounded's discretion.

This will require leadership at the highest level in the company.

At a minimum, the Social Impact Management Plan (SIMP) should consider incorporating the following strategies. plans and activities designed to address the risks and opportunities identified.

#	Social Impact Management Plan element	Management Strategy / Plan / Commitment Description
1	Executive Management Leadership and Oversight	Grounded to have the requisite policy, leadership, accountability, responsibility, systems, expertise and resources in place to manage the social and economic impacts associated with the SHRA Development.
2	Policy and procedural review.	Review of existing Grounded procedures: • Aboriginal Engagement Policy and Strategy • Integrated Management System (IMS) Development of new or revision of existing policies and procedures sufficient for the effective implementation of the SIMP.
3	Local Communications Strategy	Within the CMP and OMP, consider the preparation of a communication strategy to guide ongoing engagement with local stakeholders. The communication strategy may make provision for regular updates about the development and include: • the use of Grounded's existing social media;

#	Social Impact Management Plan element	Management Strategy / Plan / Commitment Description
		• the establishment of an 1800 inquiry line and webpage-based email inquiry line; and, • the use of local print and social media where required.
4	The provision of dedicated non-resource sector short- and long-term accommodation.	Contemplation of prioritising a proportion of the accommodation units and townhouses at discounted rates for essential Service Workers (non-resource sector) workers including the Not for Profit (NFP) sector, as a part of Grounded's social investment program.
5	A medium to long term transition to permanent, open market, residential accommodation.	Preparation of a staging plan or transitional strategy to guide the transition from TWA / STA to permanent residential development including timeframes.
6	Kariyarra Relationship	Engagement with the Kariyarra Aboriginal Corporation (KAC) in recognition of Kariyarra people as the TOs of the land on which South Hedland is located and to create opportunities for Kariyarra's socio-economic and cultural participation in the development.
7	Security Strategy	Within the CMP and OMP, consider the preparation of a Security Strategy to optimise social integration with the community of South Hedland while effectively defending against opportunistic crimes against property.
8	Community Engagement Strategy	Within the Operational Management Plan, consider the preparation and implementation of a Community Engagement strategy that: • Allows for potential community access to: o the Dining Hall and landscaped area~~,~~ o the Convenience Store and o other spaces as agreed from time to time. • Integrates with and contributes to local community events.

#	Social Impact Management Plan element	Management Strategy / Plan / Commitment Description
		• Allows for appropriate the use of local social and health infrastructure by development occupants. • Consideration of an annual social investment component, at Grounded's discretion, that focusses on the social footprint of the development and the effective implementation of the SIMP.
9	Local Economic Participation Strategy	Within the CMP and OMP, consider the preparation of a Local Economic Participation Strategy that incorporates the following elements: • A Local Training to Employment Plan (LTEP) • A Local Industry Participation Plan (LIPP)
10	Traffic Management Plan (TMP)	Development of a TMP, in accordance with an expected development condition if approved, that: • minimises construction and operations traffic on Kennedy and Parker Streets between the hours of 0730 – 0830hrs and 1430 – 1530hrs, and • minimises construction and operations traffic on Coppin Place and Stanley Street at all times.
11	Monitoring and Evaluation	Within the OMP, consider the establishment of monitoring and evaluation plan for the SIMP that provides metrics that are useful to both Grounded and the Town and that allows for adaptive management of impact strategies as the development progresses.

The SIMP is set out in **15 Management Planning** and which includes recommendations for Monitoring and Evaluation.

AUTHOR'S NOTE

The author would like to acknowledge and sincerely thank the stakeholders who have contributed to the development of this SIA.

Stakeholder contributions and the information gathered during consultations has provided valuable insights that have contributed to developing a thorough understanding of the potential socio-economic and cultural risks and opportunities that may arise from the SHRA Development and so have helped inform how they can be managed.

Important aspects of SIA to note include:

- The subjective nature of potential social, cultural and economic impacts can make it difficult to assess and predict risks and opportunities with accuracy,
- SIA requires interdisciplinary thinking and the contribution of specialists in various fields.
- Stakeholder availability and understanding of a) the project being assessed, and b) the processes for SIA, is critical, as is providing stakeholders the opportunity and time to consider impacts and respond in methods and formats that they are comfortable with.
- SIMP KPIs and metrics, if constructed properly, can provide the baseline for longitudinal measurement of change and can be beneficial to all if agreed useful at the beginning.

A key purpose of SIA is that is should be useful to all those involved, i.e., those potentially affected, those causing the impacts, those who give approval for the impacts to occur and those responsible for their management and oversight.

A common risk is that a SIA Report, once approval has been obtained, is for the document to sit on an office shelf and never be referred to again.

Circle has sought to develop this SIA in a manner consistent with the above, the IAIA Guidelines and international best practice applied locally, commensurate with the scale and nature of the project assessment being undertaken.

The best way to ensure best practice and practical management of social and economic risk is through continued and active communication with local stakeholders about a project and the active management of their participation in the project.

Consequently, the achievement of Grounded's aims would be well supported by the implementation of a Local Communications Plan, one of the key recommendations of this SIA and the framework SIMP provided.

The potential social impacts identified in this SIA should be able to act as much as predictors of emerging impacts (and issues) to be managed, as they are the foundations of the mitigation and enhancement strategies suggested. That is, as the socio-economic and cultural environment changes as it will, Grounded should be able to use this knowledge and its local relationships to respond accordingly through an adaptive management approach.

This will allow for ongoing refinement to the approach and will maximise Grounded's chances of success in achieving its aspirations and vision for the SHRA Development.

Circle wishes all parties success in their endeavours and hopes that this SIA Report assists in that regard.

James Kernaghan (April 2025).

TERMS, ABBREVIATIONS AND DEFINITIONS

Term / Abbreviation	Definition
ABS	Australian Bureau of Statistics
ALARP	As Low As Reasonably Practicable
AOD	Alcohol and Other Drugs
Amenity	Community amenity refers to the liveability of a town or community. Contributing factors include aspects of the built environment, e.g., housing, transport, air and water quality, access to the natural environment, parks and recreational facilities, heritage and social and aesthetic aspects of a community. Amenity can also include the level of access to community services such as childcare, medical and dental care, emergency and public safety services, shops, employment, community health infrastructure, cultural, sporting and leisure services infrastructure and organisations.
ATSI / Aboriginal	Aboriginal and Torres Strait Islander people of Australia. In this SIA the term Aboriginal is used given the location of the project.
CDP	Community Development Program – remote employment and community development program that provides flexible employment and skill development Aboriginal welfare recipients.
Community welfare and wellbeing	Community welfare and wellbeing refers to the wellbeing of individuals, families and the community. Often the terms welfare and wellbeing are often used interchangeably, with positive wellbeing associated with being comfortable, happy or healthy. The OECD Better Life Index uses a multi-dimensional approach to measure community welfare and wellbeing, including for current wellbeing; income and wealth, jobs and earnings, housing, health, education, work-life balance, environment, social connections, civic engagement, safety and subjective wellbeing; and, for future wellbeing a four capitals approach: natural, human, economic and social capital.
CMP	Construction Management Plan
DA	Development Application

Term / Abbreviation	Definition
Essential Service Worker	Non resource sector workers involved in providing community services in such areas as childcare, community safety and policing, education, health, and for the NFP sector.
FIFO / DIDO	Fly-in / Fly-out, or Drive-in / Drive-out workforces
IAIA	International Association for Impact Assessment
IMS	Integrated Management System – the system that Grounded uses to manage its health, safety and environmental impacts.
ICN WA	Industry Capability Network of WA
LGA	Local Government Area – the statistical area for the Town of Port Hedland as defined by the ABS.
LIPP	Local Industry Participation Plan
LPP	Local Planning Policy
LTEP	Local Training to Employment Plan
NFP	Not For Profit
PPP	Public Private Partnership
OMP	Operations Management Plan
RDAP	Regional Development Assessment Panel
SIA	Social Impact Assessment
SIMP	Social Impact Management Plan
Social cohesion	Social cohesion in Australia, according to the Scanlon Monash Index (SMI) of Social Cohesion is measured through the assessment of people's perceptions in five domains: Sense of Belonging, Sense of Worth, Social justice and equity, Participation (political), and Acceptance (and rejection). The Scanlon Institute adopts a definition of Social Cohesion as: "*the willingness of members of society to cooperate with each other in order to survive and prosper*".

Term / Abbreviation	Definition
Social Impact	The positive and negative things that might happen in a community when a something is planned for and then carried out, e.g., a project, a new public policy, a program – anything that triggers social change in that community. Social impacts can affect people's way of life, their culture, their community, their political systems, their environment, their health and wellbeing, their personal and property rights, and their fears and aspirations.
SROI	Social Return on Investment
STA	Short Term Accommodation
Statistical Area (SA)	ABS Statistical Area, e.g. SA1, SA2.
TIS	Traffic Impact Statement
TMP	Traffic Management Plan
Town	Town of Port Hedland
TWA	Transient Workforce Accommodation
Workforce Accommodation	As defined in the Town's *Local Planning Policy 05 – Workforce Accommodation (LPP/05).*

1. Project Description

This project description section is drawn directly from information and publications provided to Circle by Grounded.

Box 1-1: Grounded Construction

Grounded specialises in infrastructure for remote mining and civil projects Australia wide, including design and construction, installation, refurbishment, relocation and operation of Developments and camps.

Grounded facilitates the installation of both permanent and temporary modular portable buildings, mining camps, non-process infrastructure, operational facilities and long-term housing.

Importantly, Grounded enhances mining communities by ensuring they are equipped with all modern amenities and facilities required for comfort and wellbeing on site.

Grounded have completed several projects in Port Hedland since 2013 and more broadly across the Pilbara region, employing a significant number of local people in their projects.

Grounded currently have approximately 80 employees made up of project managers, contract administrators, designers, construction supervisors and trades personnel[2]. While largely Perth based, these staff visit the regions including Port Hedland and their activities contribute to Grounded's local spend.

It is estimated that Grounded have spent in the region of $3M in Port Hedland through engagement of local businesses and local workers over the past five years.

1.1. South Hedland Regional Accommodation Development

Grounded is diversifying its service offering by offering Build, Own, and Operate Worker Accommodation solutions to the mining and resources industries.

The South Hedland Regional Accommodation Development (SHRA Development), proposed on the landholding owned by Grounded at South Hedland, will become an 'accommodation of choice' for transient, blue- and white-collar workers in the Port Hedland region.

The target market for SHRA Development is:

- Resource sector contractors and subcontractors who are unable to obtain accommodation at the existing TWA places, particularly during times when major resource companies import large shutdown crews.
- Professionals visiting South Hedland to provide a range of services to the private sector, the public sector (government agencies) and the community and NFP sector.

[2] https://www.groundedgroup.com.au/

Box 1-2: The SHRA Development Offering

> "*The SHRA Development will offer a diverse range of accommodation options including for individual skilled and semi-skilled workers and visiting professionals to the region, and permanent self-contained 3-bedroom / 3-bathroom Town Houses for long term leases, VIP and couples' accommodation*."

Central facilities will include an onsite café, limited licensed dining facilities and a small convenience store for residents, as well as recreational facilities within extensively landscaped grounds.

Grounded's vision is summarised in Box 2 below:

Box 1-3: Grounded's SHRA Vision

> *Grounded is diversifying its business model by offering build, own, and operate worker accommodation solutions tailored to the mining and resource sectors.*
>
> *Our latest development, South Hedland Regional Accommodation (SHRA), is set to become the 'accommodation of choice' in the Port Hedland region.*
>
> *The proposed development will represent a forward thinking, visionary community with a fresh outlook on workers accommodation solutions. With 250 'best in class' rooms and 15 three-bedroom residential styled townhouses, SHRA will offer a diverse range of accommodation solutions to suit local workforce requirements.*
>
> *Featuring thoughtfully designed landscaping that responds to the local climate, provides shade, visual interest and integration within the residential area. SHRA will promote healthy and active lifestyles by incorporating a running track, pool, multi-court, as well as an outdoor and indoor gymnasium.*
>
> *Beyond just a place to stay, this development has been especially designed to enhance well-being, safety and security of our residents. Grounded is transforming traditional workforce camp style living into a vibrant, modern community.*
>
> *A place where residents don't just stay but truly feel at home.*

Figure 1-1 and Figure 1-2 overleaf show the SHRA development location and existing site at Lot 51, Kennedy Street South Hedland (Deposited Plan 425988).

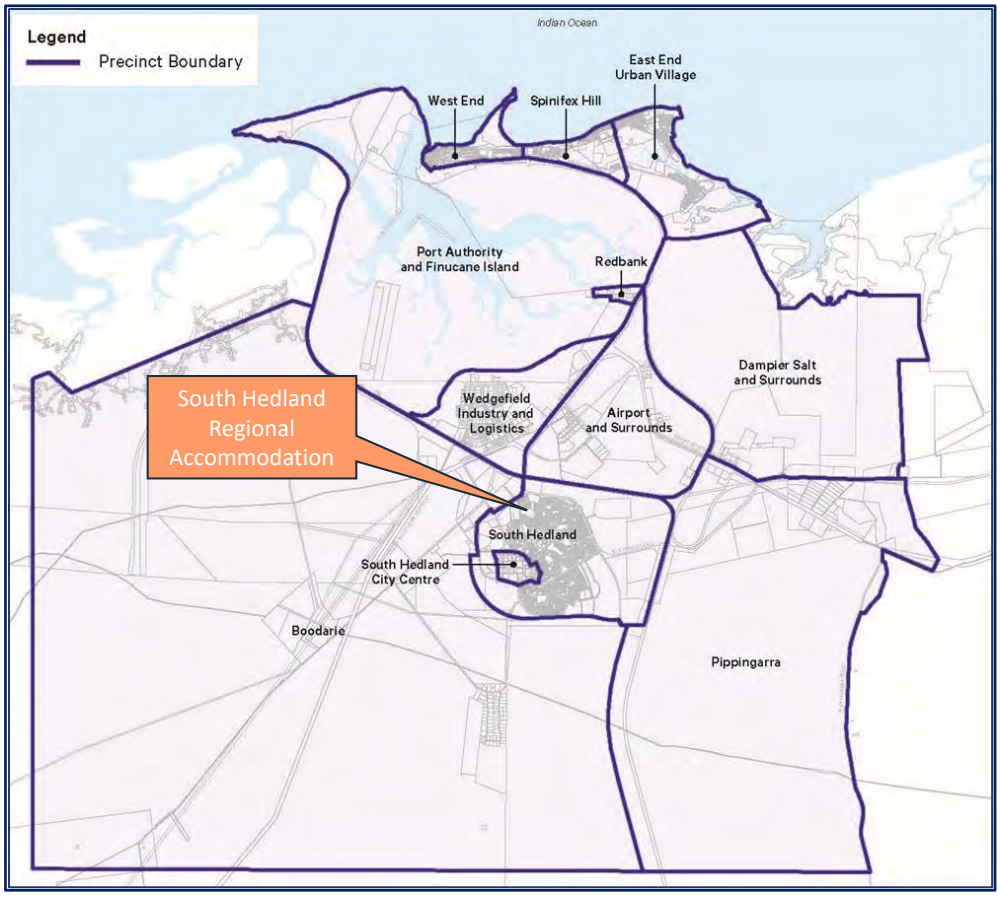

Figure 1-1: South Hedland Regional Accommodation location map.

Figure 1-2: SHRA Site Plan (preliminary)

1.2. Estimated Development Costs and Economic Impact

The SHRA Development has an estimated construction value of approx. $60 million with the spend being predominantly with WA based suppliers, subcontractors and direct workforce. The direct local spend is estimated to be 15 – 20%, i.e. approx. $9 – $12 million over a 12-to-18-month period.

Annual Operational Expenditure is expected to be approximately $10 million with an estimated local spend for local staff hires, consumables, food, waste management, fuel etc of between 20% and 30%, i.e. approx. $2 –$3 million per annum equating to $20 – $30 million over a 10-year period.

These are direct spending figures and do not consider any economic multiplier effect; however, according to a recent report commissioned by the Port Hedland Industries Council (PHIC), and prepared by economics consulting firm Acil Allen, every dollar of expenditure made in the area generated flow on expenditure of $1.97[3].

Actual economic impact therefore would be in the vicinity of $27 – $36 million for direct and indirect local construction spend and $40 – $60 million direct and indirect local spend during the anticipated 10-year operation of SHRA Development.

1.3. Alternative Locations

Grounded considered several sites around Port and South Hedland based on:

- the availability of land and services infrastructure,
- the expected future long and short-term accommodation demand, and
- the Town of Port Hedland planning and policy context.

In Grounded's view, the site chosen for SHRA Development provides the best location to satisfy the above criteria and would afford the greatest level of social and economic integration in the long term and is consistent with the Town and State's policy imperatives.

1.4. Land Use History

Historical aerial photographs show that the lot was largely vegetated in 1995, and between then and 2001, the landholding was developed by BHP for Transient Worker Accommodation (TWA), the Pundulmurra Camp. The camp was located on the western half of the landholding and then decommissioned, and the buildings and infrastructure were removed in approximately 2015.

A physical site inspection revealed that there are some remaining hardstand carparks, concrete footpaths and redundant electrical infrastructure remains, and that the site has lain dormant and in disrepair since decommissioning.

Figures 1-3, 1-4 and 1-5 overleaf show aerial photographs of the site for 1995, 2004 and 2024 obtained from Landgate.

[3] https://acilallen.com.au/uploads/projects/870/ACILAllen_Economic-Significance-of-Port-of-Port-Hedland_2022-2023.pdf

Figure 1-3: 1995 Aerial Photo (Landgate, 2025)

Figure 1-4: 2004 Aerial Photograph (Landgate, 2025)

Figure 1-5: 2024 Aerial Photograph (Landgate, 2025)

1.5. Current Land Use

The landholding was purchased from BHP by Seventh Day Adventist Church (SDAC) in 2020. In September 2022 the site was then subdivided into two lots Lot 50 and Lot 51 (refer Figure 1-6 below). Grounded purchased Lot 51 from SDAC in August 2024.

SDAC have approached Grounded to assist with the design and construction of the Community Hall and Church proposed for Lot 50. It is envisaged that both lots will be developed simultaneously pending the successful approval of each. SDAC will lodge an independent DA.

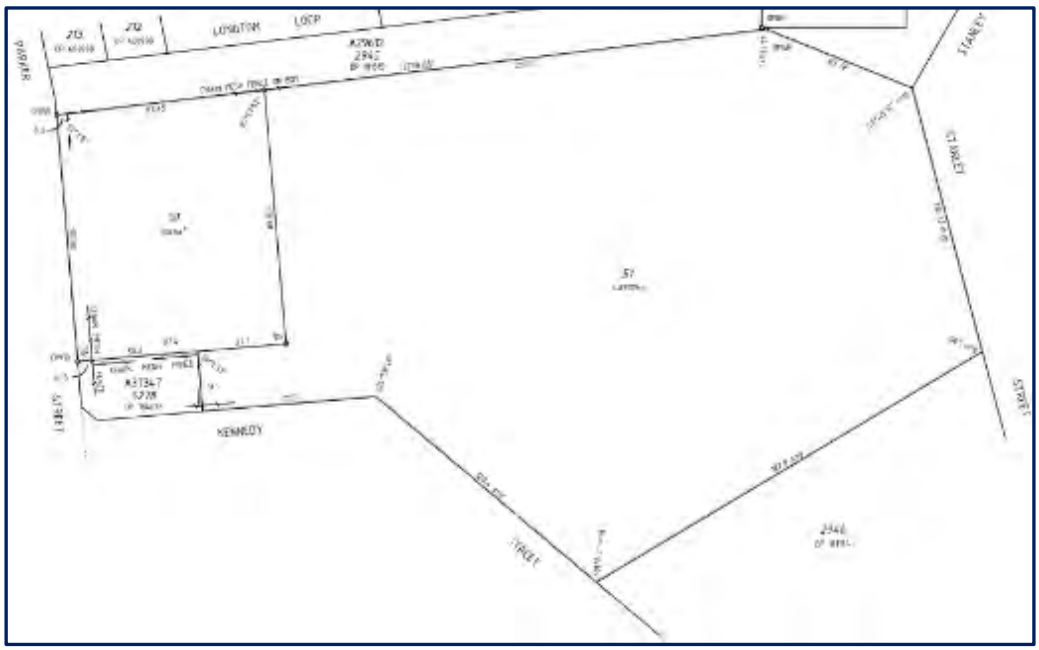

Figure 1-6: Lot 50 & 51 (Deposited Plan 425988)

1.6. Construction and Construction Workforce

From receipt of DA approval, the construction of SHRA is expected to take approximately 12 to 18 months. Approximately, 30 people (50 at peak) will be employed in various construction roles, including carpenters, labourers, operators, electricians, plumbers, supervisory and other management administration and Perth based support staff.

Temporary construction offices, amenities and laydown will be established onsite and construction workers will be accommodated offsite at existing TWA facilities elsewhere in Port and South Hedland.

Management of the construction workforce will be through Grounded's existing Human Resources policies and procedures and will include requirements for inductions and abidance with the construction accommodation providers' rules and obligations associated with the use of the accommodation. TWAs in Port and South Hedland have codes of conduct with which their staff and guests must comply.

During construction, workforce health and safety will be managed through Grounded's Work Health and Safety systems and procedures. First aid will be provided onsite, and the construction workforce will rely on the existing local medical and emergency facilities provided by the Western Australian Country Health Service (WACHS).

1.7. Local Goods and Services

The local spend in the Port Hedland Local Government Area (LGA) will likely be in the vicinity of 15% to 20% of the total project value and include bus and vehicles hire, plant & equipment hire, consumables, building products and tools, local labour hire, and worker accommodation during construction. Major construction elements that will be sourced locally will include concrete, import fill, gravel and waste management and recycling will be via the local waste transfer station.

The construction demand for local goods and services is expected to include, but not be limited to, the following areas:

- accommodation,
- freight handling.
- fuel, and
- geotechnical assessments,
- land survey,
- local vehicle, plant and equipment hire,
- meals,
- security,
- supply of building materials, and
- supply of concrete, gravel and fill.

Local goods, consumables and services will be sourced during the anticipated 10-year operations phase.

1.8. Operations and Operations Workforce

The present DA contemplates an approval length of 10 years (2026 – 2036). Grounded's preference is for longer tenure, as in addition to the transient worker accommodation, Grounded is proposing to construct 15, two storey townhouses (3 bed, 3 bathroom) to provide a permanent residential

solution on a long-term lease basis. The design life of the townhouses is 40+ years and so would support an operational life to 2066.

The SHRA Development will require between 10 and 20 (30 at peak) full time staff and contracted services during operations in a variety of roles including:

- Management and administration / reception.
- Catering and cleaning.
- Stores, grounds maintenance and gardening.
- Trades maintenance, plumbing, electrical, carpentry and handyman services.

Grounded will engage an experienced 3rd party operator to manage the operation of the SHRA Development. The operator will provide their own workforce and policies and procedures for their own people employed at the SHRA Development. Residents of the SHRA Development will be required to have a visitor induction upon check in which will include accommodation rules which must be complied with (or accommodation may be revoked).

1.9. Facilities

The SHRA Development is intended to be an industry leading development providing an 'accommodation of choice' in the Port Hedland area. It will prioritise and support the safety, physical and mental health of residents and aims to mitigate as much feasibly possible, psychosocial hazards that can arise in typical TWA facilities.

The facilities will focus on recreational and communal activities to promote healthy and active lifestyles. Grounded's vision for the SHRA Development is to shift the residents experience from that of living in a camp to living in a village – creating a sense of community, and that is integrated into the surrounding community in a positive and appropriate way.

The proposed SHRA facilities and infrastructure will include:

- 252 x individual accommodation units with queen bed, desk, wardrobes, fridge and ensuite.
- 15 x Two-Story Townhouses with 3 bedrooms and 3 bathrooms (fully self-contained)
- Guest Laundries
- Administration Building including a Convenience Store and Guest Reception
- Recreation Building providing indoor activities and waiting lounge for Guests in transit
- Gymnasium & Transit Building feature indoor gym equipment, showers, toilets, lockers and First Aid room
- Outdoor Gymnasium, Swimming Pool, Multi Sports Court and Running Track
- Dining Hall, Tavern, Café and Commercial kitchen with refrigerated and dry storage
- Loading Dock and Waste / Bin Store
- Maintenance workshop and Linen Store
- Outdoor al fresco area with sheltered BBQs.
- LV carparking
- Bus Pick-Up and Drop-Off including Shelter
- A cyclone shelter (Dining Hall).

The main dining hall and outdoor al fresco area will serve alcoholic beverages in compliance with a proposed liquor licence and will be designed like a typical craft brewery tavern, so that guests can have a drink with their evening meals. The SHRA Development grounds will be extensively landscaped providing shade, visual interest and integration with the local residential environment.

1.10. Medical and Emergency

The SHRA will provide basic first aid facilities only and so during operations will rely on the existing local medical and emergency facilities provided by the Western Australian Country Health Service (WACHS).

1.11. Decommissioning and Transition to Permanent Housing

Further to 1.8 above, Grounded's preference is for a 20+ years operational life of SHRA to 2046, rather than the current DA length of 10 years (2026 – 2036) for the worker accommodation component of the SHRA Development. In addition to the TWA / STA component, Grounded is proposing to construct 15, two storey townhouses to provide a permanent residential solution and to demonstrate their commitment to transition the entire landholding to permanent residential housing once commercially feasible to do so.

1.12. Employment Opportunities

The overall number of full-time employment opportunities during construction and operations is between 30 and 50 over the life of the SHRA Development. While a proportion of these will come from within Grounded's existing workforce, particularly during construction, it is likely that there will be a small to medium proportion of these that could be taken up by locals during the operations phase.

The opportunities for employment with the SHRA Development are discussed further in **13.2 Training and Employment**.

2. Policy and Regulatory Context

This section provides an overview of the policy and regulatory context at the Town level and the WA State Government level as these relate to the SHRA Development and SIA.

The local regulatory framework[4] that gives rise to a SIA is found within the *Town of Port Hedland Local Planning Scheme No. 7* and the Local Planning Policies[5] (LPP) that are prepared under Schedule 2 of the *Planning and Development (Local Planning Schemes) Regulations 2015 (Regulations).*

These include:

- *Local Planning Policy 05 – Workforce Accommodation (LPP/05)*
- *Local Planning Policy 06 – Social Impact Assessment (LPP/06)*

These LPPs arise from the Town's Transient Workforce Accommodation Strategy of October 2014[6] which was designed to manage the development of future TWAs within the Town of Port Hedland (the Town), paraphrased below.

The strategy identified that:

- Non-permanent residential workers (FIFO / DIDO) have a significant impact on the housing supply issues experienced within the Town as well as the supply and demand for services and facilities.
- Acknowledged the importance of this workforce section to the economic diversification of the Town.
- Highlighted the short to medium term imperative to provide adequate levels of TWA to cater for the necessary operational and construction workers.

The Town's policy imperative contemplates:

Box 2-1: Town TWA policy aim

> *"… a balanced and dispersed approach to the siting and location of TWA and the imposition of clear time limits on the operation of these sites to encourage a shift to a more permanent and integrated skilled workforce in the Town."*

2.1. Workforce Accommodation Policy

The Town's Workforce Accommodation Policy[7] objectives can be summarised as:

- Integrating workforce accommodation into the surrounding environment through physical design and management measures which promote social cohesion.

[4] It is noted that the SHRA proposal is not a proposal subject to approvals under any other existing legislation, such as a State Agreement ratified by the WA Parliament, the *Mining Act 1978 (WA),* the *Environmental Protection Act 1986 (WA)* or the *Environment Protection and Biodiversity Conservation Act 1999 (Cth)*.

[5] https://www.porthedland.wa.gov.au/planning-building-and-environment/planning/planning-policies.aspx

[6] Town of Port Hedland TWA Strategy 2014

[7] https://www.porthedland.wa.gov.au/Profiles/porthedland/Assets/ClientData/201216_LPP_05_-_Workforce_Accommodation_FINAL.pdf

- Ensuring that the application of design standards which are commensurate with the development lifespan and location.
- Encouraging workforce accommodation to be located close to urban settings and commercial centres that ensures reciprocal benefits for the local community and local business from an integrated workforce accommodation facility.
- Supporting high quality, adaptive and sustainable design adapted to the regional climate that provides a high level of amenity to occupants, promotes articulated frontages and avoids sterile streetscapes.

The Town wants to facilitate workforce accommodation that is demonstrated to meet the temporary needs of a specific industry or project and that allows decision makers to apply discretion regarding the duration (term) of approval, acknowledging it as a temporary and transitional use.

The Town wishes to support informed decision making through the incorporation of quality, evidence-based information and management measures monitored through key performance indicators.

Key elements for consideration include:

- demand driven – a requirement to demonstrate that additional workforce accommodation is required to accommodate the proponent's workforce,
- commuting distances – in consideration of appropriate commuting distances and travel times to and from worksites, considering industry standard 12-hour work rosters,
- location suitability – within and without that the considered appropriate travel times between the accommodation and the workplace of 30 mins, resulting in application of 'basic' or 'high' design standards,
- design standards – the aim of social integration, to the extent practicable, so to contribute to the economic activities and community values of the town, noting that proposals that don't fit the location suitability provisions, e.g., hybrid accommodation models suiting different workforce configurations will be assessed against the high design standards,
- traffic management – traffic impact assessment in accordance with the *Transport Impact Assessment Guidelines* by the Department of Planning, Lands and Heritage[8], and
- time limited approval – consideration of the period for which approval is granted potentially linked with the timeframes of a worksite or project, noting that developments designed and constructed in accordance with the high design standards may not have a time-limited approval imposed by the Town.

The Social Impact Assessment policy, LPP/06, discussed below, is triggered in the case of any development proposal for Workforce Accommodation.

[8] https://www.wa.gov.au/government/publications/planning-guidelines-transport-impact-assessment

2.2. Social Impact Assessment Policy

In support of its Workforce Accommodation policy objectives, the Town requires that a Social Impact Assessment (SIA) shall be prepared for any development falling within the use class of Workforce Accommodation (LPP/06, s4.2.1)[9].

The primary objectives of the Town's Social Impact Assessment policy include:

- Encouraging early identification and assessment of positive and negative social impacts through the development of a Social Impact Assessment (SIA) and Social Impact Management Plan (SIMP) to mitigate adverse effects and maximise positive social outcomes for the impacted community.
- Outlining the Town's expectations for the key elements of SIA, including genuine engagement with stakeholders.

The Town wishes to support informed decision making through the incorporation of quality, evidence-based information and management measures monitored through key performance indicators.

Key phases of an SIA include:

1. Scoping
2. Baseline analysis
3. Community and stakeholder engagement
4. Impact assessment
5. Social Impact Management Plan
6. Monitoring and review

The outcomes of the phases above are to be documented in an SIA Report (this document), including an explanation of the methods used for each phase.

Consultation with the Town is recommended at each phase to confirm requirements. The resulting SIA Report should be well documented and contain references to data and best-practice guidance.

This SIA Report is designed to meet the expectations of the Town regarding SIA development.

These include:

- That an SIA should consider the full lifecycle of the proposal and should be commensurate with the nature and scale of the development.
- The scope of the SIA should reasonably cover the likely significance of the predicted social impacts arising from the project.
- Engagement about the SIA is to be participatory and inclusive, respectful, meaningful and considerate of the needs of potentially impacted individuals or groups.

[9] https://www.porthedland.wa.gov.au/Profiles/porthedland/Assets/ClientData/20221012_LPP_06_-Social_Impact_Assessment_FINAL.pdf

- An SIA should be rigorous and based on comprehensive social impact analysis and incorporate the most up to date information on communities affected.
- Impact management measures should be effective and aimed to enhance benefits and mitigate any negative impacts. These should also be adaptive, and monitoring and review mechanisms should be established so that adjustments can be made to ensure ongoing effectiveness.

In effect, the Town requires a formalised SIA process, drawing on international best practice principles for SIA, such as those of the IAIA[10]. Accordingly, this SIA responds to LPP/06 and seeks consistency with the IAIA's *"Social Impact Assessment: Guidance for assessing and managing the social impacts of projects"*[11] (the IAIA Guide).

Figure 2-1 below sets out the categories of social impact assessment required to be considered in the Town's LPP/06.

[10] International Association for Impact Assessment (IAIA): C:\IAIA\Pubs\SP2-2 page.PDF

[11] Vanclay, F., Esteves, A.M., Aucamp, I., & Franks, D. 2015 *Social Impact Assessment: Guidance for assessing and managing the impacts of projects. https://iaia.org/uploads/pdf/SIA_Guidance_Document_IAIA.pdf*

Town of Port Hedland — Local Planning Policy

6.4.3 Table 1 - Categories to be considered as part of a social impact assessment.

Matter	Description
Way of life	How people live, work, play, and interact with one another on a day-to-day basis.
Culture	People's shared beliefs, customs, values, and language or dialect (including Aboriginal culture and connection to country).
Community	Its cohesion, stability, character, services, and facilities.
Political systems	The extent to which people are able to participate in decisions that affect their lives, and the resources provided for this purpose.
Environment	The quality of the air and water people use, the availability and quality of the food they eat, the level of hazard or risk, dust and noise they are exposed to, the adequacy of sanitation, their physical safety, and their access to and control over resources.
Health and wellbeing	People's physical, mental, social, and spiritual wellbeing.
Personal and property rights	Particularly whether people are economically affected, or experience personal disadvantage which may include a violation of their civil liberties.
People's fears and aspirations	Their perceptions about their safety, their fears about the future of their community, and their aspirations for their future and the future of their children.

Table 1: Matter categories to consider when identifying social impacts (Source: Vanclay, F. 2003. International Principles for Social Impact Assessment. *Impact Assessment & Proposal Appraisal* 21(1), 5-11.)

Figure 2-1: LPP/06 Social Impact Assessment Categories

Each of the above matters are addressed throughout this SIA.

2.3. Regional Development Assessment Panel

In 2019, the WA Government launched the Action Plan for Planning Reform for the purpose of "… improving development assessment processes to make them more streamlined, outcomes focused, consistent and transparent".

Part of this process was the establishment of a Regional Development Assessment Panel (RDAP) along with a Metropolitan and Outer Metropolitan Development Assessment Panel (DAP). The DAPs are decision making bodies that are independent of the Department of Planning, Lands and Heritage (DPLH) or the WA Planning Commission.

DAPs were established under the *Planning and Development (Development Assessment Panels) Regulations 2011* and are administered by the DAP secretariat within the Department of Planning, Lands and Heritage.

Each DAP meeting is constituted by up to five DAP Members comprising three Specialist Members and two Local Government Members.

The SHRA Development DA will be assessed by the RDAP for the Town of Port Hedland.

3. Grounded Policies and Procedures

Relevant Grounded policies and procedures include the following.

3.1. Indigenous Policy

Grounded's policy statement relating to Indigenous peoples is paraphrased below.

Box 3-1: Grounded Indigenous Engagement Strategy

> Grounded have developed an Indigenous Engagement Strategy that is aimed at facilitating engagement between Grounded staff and First Nations people and communities. Grounded are dedicated to bridging the gap between Indigenous and non-Indigenous Australians by establishing and maintaining an open and meaningful dialogue.
>
> Through our genuine partnerships with First Nations people, such as the joint venture with Kaniyang, Grounded are committed to increasing cultural awareness amongst Grounded employees to foster an inclusive and rewarding workplace while providing employment opportunities in the remote regions in WA in which it works

Within their Indigenous Engagement Strategy, Grounded make a variety of commitments to Indigenous employment, business participation and cultural safety, each of which is discussed further in **14 Kariyarra Community Involvement** and **15.8 Local Economic Participation Strategy**.

For the SHRA Development, Grounded have commenced discussions with the Kariyarra people, who are the Traditional Owners of the Port Hedland area, through their representative organisation, the Kariyarra Aboriginal Corporation RNTBC (KAC), for the purposes of establishing a relationship.

The Kariyarra people hold native title rights and interests in the Port Hedland area in accordance with the *Native Title Act 1993 (Cth)* (NT Act) and have rights pursuant to the *Aboriginal Heritage Act 1972 (AH Act)* (WA). These matters are further discussed in **12.1 Kariyarra, Native Title and Aboriginal Cultural Heritage**.

3.2. Environment Policy

Grounded's policy statement relating to the environment is paraphrased below.

Box 3-2: Grounded Environment Policy

> Grounded's Management is committed to minimising, where reasonably practicable, our impact on the environment for the benefit of current and future generations.
>
> Environmental Objectives
>
> GCG Management and employees are committed to:
>
> Preventing pollution, minimising waste and protecting the environment.

Actively promoting recycling both on our work sites and within our administration processes.

The company has an Integrated Management System (IMS) through which environmental matters are managed.

The environmental management measures include:

- Communicating the environmental policy as part of employee and contractor inductions and where changes are made, ensure that these are communicated to all those required to comply with the policies, and other stakeholders as required.
- Training, educating and communicating with employees, contractors and other relevant interested parties regarding the environmental policy and the company's expectations towards protecting the environment.
- Setting measurable environment and sustainability goals and objectives which are monitored and reviewed through audit and management review processes to ensure continual improvement.
- Reporting, investigating and applying corrective actions to all environmental incidents and non-compliances.
- Complying with environmental statutory, regulatory and other requirements.
- Documenting the mitigation of all company environmental hazards and risks to as low as reasonably practicable.
- Conducting audits of environmental policy and processes as part of continual improvement.

Grounded's IMS is certified to ISO 14001:2015 Environmental Management Systems.

3.3. Policy Review and Development

Grounded will undertake a policy review to ensure that all impacts that might arise from the SHRA Development and the proposed social impact management actions have been considered by looking through the company's values lens.

Where necessary, Grounded will develop and implement specific policies and procedures to achieve operational consistency with the SIMP, including the institutionalisation of monitoring, evaluation, review and reporting actions, consistently with its IMS.

4. Circle SIA Practice and Methodology

Circle adopts the IAIA Guide in consideration of the local policy and regulatory context, and the project concerned, commensurate with the scale and nature of potential project impacts.

Consistently, the main phases and tasks drawn and adapted from the IAIA Guide are as shown in Table 1 below[12].

Table 4-1: SIA Tasks and Actions

Phase and Task	Activities
Scoping: Understand the project and scope the potential impacts (risks and opportunities).	• Understand the project. • Clarify roles and responsibilities. • Define the social area of influence. • Profile the affected community. • Inform communities. • Develop inclusive participatory processes. • Scope the potential issues. • Assemble the relevant baseline data.
Analysis: Predict, analyse and assess the likely impact pathways.	• Identify social changes and impacts. • Understand any potential indirect and cumulative impacts. • Consider and analyse affected party responses. • Understand the significance of the changes likely to be caused. • Consider project alternatives.
Plan and Manage: Develop and implement strategies.	• Address negative impacts. • Enhance benefits and opportunities. • Support communities with change. • Establish a grievance mechanism. • Negotiate an Impacts and Benefits Agreement (IBA). • Develop a Social Impact Management Plan (SIMP). • Establish partnerships to implement the SIMP.

[12] See Fig. 2 of the IAIA Guide, p7.

Phase and Task	Activities
	• Implement ongoing social performance plans.
Monitor, Measure and Adapt: Design and implement monitoring programs.	• Develop the indicators to monitor change. • Implement a participatory monitoring plan. • Implement adaptive management. • Design and implement evaluation and periodic review.

This SIA Report seeks to address the above IAIA Guide Phases and Tasks, consistently with the Town's LPP/06.

4.1. Impact Identification and Community Profiling

Preliminary impact identification was undertaken through a multidisciplinary workshop within the proponent's project team and in initial discussions with key local stakeholders.

The Grounded workshop involved discussion about the following:

- An introduction to SIA and Stakeholder Management Theory and Practice.
- Understanding the project scale and nature, including activities and timelines.
- Setting study boundaries and methodology, including impact themes and categories.
- Initial stakeholder identification, analysis and engagement planning.
- Identify potential impacts (risks and opportunities).
- Preliminary impact assessment.
- Land on the approach and the key elements to assess.

The workshop outputs were an input to the more detailed SIA Scoping Study processes of:

- detailing and finalising boundaries and limitations,
- collecting and analysing basic social and economic data,
- reviewing prior SIAs in the location, and
- initial impact assessment.

The impact assessment process used is set out below.

4.2. Impact Assessment Methodology

Circle uses a risk and opportunity assessment framework, based on the International Standards Organisation (ISO) Risk Management Framework: ISO 31000[13]. The ISO framework has been adapted to assess the likelihood and consequences of social, cultural, and economic impacts.

Impacts are considered the outcomes arising from the realisation of risks (usually detrimental) or the taking up of opportunities (usually beneficial).

[13] https://www.iso.org/iso-31000-risk-management.html/

Risks are assessed in relation to their likelihood and consequence, and initial severity rankings are determined, i.e., **Community Detriment Ranking**. Mitigation strategies are identified and recommended, and the risks are re-ranked to provide a residual ranking, post mitigation[14].

Opportunities are assessed in relation to the likelihood of the local community (people, organisations and businesses) taking advantage of the opportunities on offer, within their existing capacity, i.e., an Initial **Community Benefit Ranking**.

Enhancement strategies are identified and recommended, and the opportunities are re-ranked to provide an enhanced ranking, should such strategies be adopted and successfully implemented. This approach can provide some guidance to proponents in relation to the form of social investment programs in which they may choose to invest.

In summary:

- **Beneficial** social impacts can occur from *opportunities* that become available from a development project, for example, training, employment opportunities or business contracts, where these are successfully taken up by local suppliers.
- **Detrimental** social impacts can occur from *risks* that might be caused by a development project, for example, increased traffic in urban areas causing a rise in traffic accidents, or unfettered construction workforce interaction with a local community, such as anti-social behaviour.

Not all detrimental social impacts that are predicted will happen. It depends on the likelihood of the risk conditions being in place, the actual occurrence of the activity that leads to the detrimental impact, and the plans that are put in place to manage them.

Similarly, not all beneficial social impacts that are predicted will happen. It depends on the likelihood of the opportunity conditions being in place, the actual occurrence of the activity that leads to the beneficial impact, and the plans that are put in place to manage them.

Often, risks have a corresponding opportunity and vice versa, for example, sometimes opportunities for beneficial impact are taken up by some, at the expense of others in the community – particularly vulnerable groupings.

Very often, the perception of risks and opportunities in a community does not match the reality and this can cause increased and unnecessary worry and concern about risks that are unlikely to happen. Similarly, disappointment and loss, when expected benefits do not materialise.

Using a risk and opportunity model combined with best practice community and stakeholder consultation will optimise the management of impacts commensurate with the scale and nature of the project concerned.

It is important to note that:

- SIA provides a snapshot in time and should be seen as an iterative process that changes over time and so adaptive management should be applied considering the dynamic social, cultural and economic environment in the affected community.

[14] IAIA Guide Task 13 suggests a similar likelihood vs consequence model for establishing the significance of change.

- Ongoing community and stakeholder engagement is critical to effective impact management and appropriate local ongoing communication and participation structures should be established.
- Appropriate indicators and metrics should be agreed and built into any (SIMP including the appropriate social baseline from which to measure future change.

Figures 4-1 to 4-4 below show the Social Risk and Social Opportunity matrices, and reference tables used in assessing the identified impacts of the SHRA Development.

CONSEQUENCE	CIRCLE ADVISORY PTY LTD			Insignificant - A	Minor - B	Moderate - C	Major - D	Catastrophic - E
	Socio-economic and cultural			Low or no negative impacts on the socio-economic & cultural environment	Minor short term negative impacts on the socio-economic & cultural environment	Moderate medium term negative impacts on the socio-economic & cultural environment	Major medium to long term negative impacts on the socio-economic & cultural environment	Major and long term, severe and potentially irreversible negative impacts on the socio-economic & cultural environment
				A	B	C	D	E
LIKELIHOOD	Almost Certain - 5	Event is expected to occur in most circumstances	5	Low	Moderate	High	Extreme	Extreme
	Likely - 4	Event will probably occur in most circumstances	4	Low	Moderate	High	Extreme	Extreme
	Possible - 3	Event should occur at some time	3	Low	Low	Moderate	High	Extreme
	Unlikely - 2	Event could occur at some time	2	Low	Low	Moderate	High	Extreme
	Rare - 1	Event may occur only in exceptional circumstances	1	Low	Low	Moderate	High	Extreme

SEVERITY	RISK MANAGEMENT ACTIONS
EXTREME	The risk of major medium to long term severe and potentially irreversible negative impacts to the organisation and the community is critical as the consequences could be catastrophic, so the risk severity is ranked as **Extreme**. Risk management requires the attention of the highest level and priority in the organisation at Board and Executive levels. Mitigation plans must be put in place to avoid the risk from being realised, and if the risk cannot be totally removed, then robust mitigation actions and plans must be put in place based on best practice socio-economic and cultural impact management theory and practice. The organisation must work in collaboration with local stakeholders and the local community.
HIGH	The risk of moderate to major long term negative impacts to the organisation and the community is **High** and so requires the attention and priority of senior executive and operational management levels in the organisation. Mitigation plans must be put in place to avoid the risk from being realised, and if the risk cannot be totally removed, then robust mitigation actions and plans must be put in place based on best practice socio-economic and cultural impact management theory and practice. The organisation must work in conjunction with local stakeholders and the local community.
MODERATE	The risk of minor or short to medium term negative impacts to the organisation and the community is **Moderate** and so requires the attention and priority of operational management in the organisation within day to day operations and standard practices. Mitigation plans must be put in place to avoid the risk from being realised, and if the risk cannot be totally removed, then to have robust mitigation actions put in place based on best practice socio-economic and cultural impact management theory and practice. The organisation should work in conjunction with local stakeholders and the local community.
LOW	The risk of any or minor short to medium long term negative impacts to the organisation and the community is **Low** and so should be able to be managed successfully through normal operational practice and procedure. At the outset, it is nonetheless important to ensure that normal practice and procedure is fit for purpose and based on a hierarchy of avoidance, mitigation or management to avoid or manage the risk from being realised, and if the risk cannot be totally removed, then to have robust mitigation actions put in place based on best practice socio-economic and cultural impact management theory and practice. The organisation should work in conjunction with local stakeholders and the local community where this is needed.

Figure 4-1: Social Risk Matrix

Circle Advisory Pty Ltd	Socio-economic and Cultural Risk Management Reference Tables				
LIKELIHOOD	**WHAT ARE THE CHANCES OF THE RISK HAPPENING?**				
Level	**Descriptor**	**Description**			
5	Almost certain	The risk has occurred recently in these types of development projects and is **almost certain** to occur again as it is an expected occurrence on this type of development project in this or similar regions.			
4	Likely	The risk has a history of occurrence for this type of development project or is difficult to control due to external influences of the region so it is **likely** to occur.			
3	Possible	The risk occurs on an irregular basis, but has occurred on this type of development project, in this type of region and so it is **possible** that it might occur.			
2	Unlikely	The risk would be an uncommon occurrence and would occur in remote circumstances. It has occasionally occurred on this type of development project, but it is **unlikely** to occur.			
1	Rarely	The risk may occur only in **rare** and exceptional circumstances and is not likely to occur in this location.			
CONSEQUENCE	**HOW BAD WOULD IT BE IF IT HAPPENED?**				
Category	**A**	**B**	**C**	**D**	**E**
	Insignificant	**Minor**	**Moderate**	**Major**	**Catastrophic**
Socio-economic and cultural impact	Insignificant or no unapproved disturbance to land or impingement or impairment of land and property. Insignificant or no unacceptable disruption to cultural life or damage to cultural heritage sites, places, objects and intangible cultural heritage. Insignificant or no impacts on community health and wellbeing, or amenity and social cohesion. Insignificant or no negative impacts on local economy and development. Community can easily adapt or cope with the change. Little or no stakeholder concern.	Short term disruption, disturbance to land or impingement or impairment of land and property. Minor short term disruption to cultural life and / or minimal damage to cultural heritage sites, places or objects that can be avoided or mitigated. Minor short term potential impacts on community health and wellbeing, or amenity and social cohesion and that are easily manageable. Minor short term impacts on the local economy and its development that can be easily absorbed. Community has the capacity to adapt or cope with the change, but needs some support. Stakeholder concern that can be managed through good communication.	Moderate medium term disturbance to land or impingement or impairment of land and property. Moderate medium term disruption to cultural life and / or serious damage to cultural heritage sites, places or objects, i.e. that cannot be easily avoided or mitigated. Moderate medium term negative impacts to community heath and wellbeing or amenity and social cohesion and that are not easily manageable. Moderate medium term negative impacts to the local economy and its development that are not easily absorbed. Community has some capacity to adapt and cope with changes, but requires a moderate amount of support. Serious stakeholder concern that cannot be easily managed through good communication.	Major unapproved disturbance to land or impingement or impairment of land and property. Major, medium to long term disruption to cultural life and / or irreversible damage to cultural heritage sites, places or objects that cannot be avoided or mitigated. Major, medium to long term negative impacts to community health and wellbeing or amenity and social coehsion that cannot be managed. Major, medium to long term negative impacts to the local economy and its development that cannot be absorbed in the medium to long term. Community has some capacity to adapt and cope with the changes - requires significant support. Significant and major concern from broader stakeholders and the community, prolonged community annoyance.	Catastrophic long term unapproved disturbance to land or impingement or impairment of land and property. Severe long term disruption to cultural life and / or major, irreversible damage to cultural heritage sites, places or objects. Severe long term negative impacts to community health and wellbeing, or amenity and social cohesion. Severe long term negative impacts to the local economy and its development that cannot be reversed. Community has no capacity to adapt and cope with the changes even with significant support. Significant and major stakeholder concern and community outrage.

Figure 4-2: Social Risk Reference Table

CONSEQUENCE	CIRCLE ADVISORY PTY LTD		Insignificant - A	Minor - B	Moderate - C	Major - D	Immense - E
	Social-economic and Cultural		**The scale and nature (size and type) of the opportunity under consideration is expected to result in:** Little or no material change in social conditions of life in the affected community. Little or no change in people's ability to take greater control and / or practice culture. Limited or no local benefit accrual. Very few jobs and very little contracts. Very little local economic contribution.	**The scale and nature (size and type) of the specific opportunity under consideration is expected to result in:** Some measurable benefit that has a positive social impact. Some opportunities for people to enhance cultural maintenance. Benefit accrual only to those with existing skill and capacity. A small number of jobs and few small scale contracts. A minor contribution to the local economy.	**The scale and nature (size and type) of the specific opportunity under consideration is expected to result in:** Moderate improvement in social conditions in the community. People have greater access and ability to maintain and practice culture. Benefit accrual to all those with existing capacity who choose to participate. Jobs to most of those who want them and a number of contracts let locally. A solid contribution to the local economy.	**The scale and nature (size and type) of the specific opportunity under consideration is expected to result in:** Broad improvement in social conditions. There is a significant increase in people participating in cultural traditions and maintenance. Broad benefit accrual across the community. Significant number of local people employed. Significant number of contracts let locally. Significant contribution to the local economy.	**The scale and nature (size and type) of the specific opportunity under consideration is expected to result in:** Widespread and immensely positive benefits in the community through opportunities directly and indirectly associated with a project. Many local people employed in the long term. Many long term contracts let locally. Significant legacy and intergenerational benefit.
LIKELIHOOD	Almost Certain - 5	**It is almost certain that most of the local community (people and organisations) will be able to capture the available opportunities easily, within their existing capacity and without support.**	**Low**	**Moderate**	**High**	**High**	**Transformational**
	Likely - 4	**It is likely that most of the local community (people and organisations) will be able to capture the available opportunities within their existing capacity and without support.**	**Low**	**Moderate**	**Moderate**	**High**	**Transformational**
	Possible - 3	**It is possible that most of the local community (people and organisations) will be able to capture the available opportunities within their existing capacity and without support.**	**Low**	**Moderate**	**Moderate**	**Moderate**	**High**
	Unlikely - 2	**It is unlikely that most of the local community (people and organisations) will be able to capture the available opportunities within their existing capacity and without support.**	**Low**	**Low**	**Low**	**Moderate**	**Moderate**
	Highly Unlikely - 1	**It is highly unlikely that most of the local community (people and organisations) will be able to capture the available opportunities within their existing capacity and without support.**	**Low**	**Low**	**Low**	**Low**	**Low**

COMMUNITY BENEFIT	OPPORTUNITY MANAGEMENT ACTIONS
TRANSFORMATIONAL	If the opportunity being considered is of a level that is **Immense** in terms of potential benefit in the community, then the benficial outcomes for the community can be expected to be **Transformational**, except in the case where the majority or certain sectors of the community are unlikely (or highly unlikely) to be able to take advantage of the opportunities on offer, without any assistance and support. As the scale (size and type) of the opportunity increases then the scale of benefit to the community will increase commensurate with the community's capacity to take advantage of the opportunity, and it might be expected that the participation of those parts of the community who are initially unlikely to be able to take advantage of the opportunities on offer, might achieve greater participation. It is in these instances that significant capacity building and support is required, aimed toward participation, but including consideration of different types of social investment, not directly related to project opportunities but aimed at addressing socio-economic disadvantage and that can underpin greater participation over time. Those unlikely or highly unlikley to be able to participate without suport are typically the vulneable and under served groups in society and who are most at risk from deriving no benefit, and possibly harm, from the project under consideration.
HIGH	If the opportunity being considered is of a level that is **Moderate to Major** in terms of potential benefit in the community, then the benficial outcomes for the community can be expected to be **Moderate**, except in the case where the majority or certain sectors of the community are unlikely (or highly unlikely) to be able to take advantage of the opportunities on offer, without any assistance and support. As the scale (size and type) of the opportunity increases then the scale of benefit to the community will increase commensurate with the community's capacity to take advantage of the opportunity, and it might be expected that the participation of those parts of the community who are initially unlikely to be able to take advantage of the opportunities on offer, might achieve greater participation. It is in these instances that capacity building and support is required, aimed toward participation, but including consideration of different types of social investment, not directly related to project opportunities but aimed at addressing socio-economic disadvantage. Those unlikely or highly unlikley to be able to participate without suport are typically the vulneable and under served groups in society and who are most at risk from deriving no benefit, and possibly harm, from the project under consideration.
MODERATE	If the opportunity being considered is of a level that is **Minor to Moderate** in terms of potential benefit in the community, then the benficial outcomes for the community can be expected to be **Moderate**, except in the case where the majority or certain sectors of the community are unlikely (or highly unlikely) to be able to take advantage of the opportunities on offer, without any assistance and support. As the scale (size and type) of the opportunity increases then the scale of benefit to the community will increase commensurate with the community's capacity to take advantage of the opportunity, and it might be expected that the participation of those parts of the community who are initially unlikely to be able to take advantage of the opportunities on offer, might achieve greater participation. It is in these instances that capacity building and support is required, aimed toward participation, but including consideration of different types of social investment, not directly related to project opportunities but aimed at addressing socio-economic disadvantage.Those unlikely or highly unlikley to be able to participate without suport are typically the vulneable and under served groups in society and who are most at risk from deriving no benefit, and possibly harm, from the project under consideration.
LOW	If the opportunity being considered is of a level that is **Insignificant** in terms of potential benefit in the community, then the benficial outcomes for the community can be expected to be **Low** in any case, irrespective of the level of capacity that most of the community (people and organisations) have to capture the opportunity. As the scale (size and type) of the opportunity increases then the scale of benefit to the community will increase commensurate with the community's capacity to take advantage of the opportunity, without any assistance and support. There will always be some sectors of the community who are unlikely (or highly unlikely) to be able to take advantage of the opportunities on offer, irrespective of the scale of the opportunity, as they lack the capacity to participate. It is in these opportunity areas and for these people that capacity building and support is required,aimed toward participation, but including consideration of different types of social investment, not directly related to project opportunities but aimed at addressing socio-economic disadvantage. Those unlikely or highly unlikley to be able to participate without suport are typically the vulneable and under served groups in society and who are most at risk from deriving no benefit, and possibly harm, from the project under consideration.

Figure 4-3: Social Opportunity Matrix

Circle Advisory Pty Ltd	Socio-economic and Cultural Opportunity Criteria and Reference Tables				
LIKELIHOOD	**WHAT ARE THE CHANCES OF THE OPPORTUNITY BEING CAPTURED - WITHOUT CAPACITY SUPPORT?**				
Level	**Descriptor**	**Description**			
5	**Almost Certain**	It is **almost certain** that the local community will be able to successfully take advantage of the opportunity available, within their existing capacity.			
4	**Likely**	It is **likely** that the local community will be able to successfully take advantage of the opportunity available, within their existing capacity.			
3	**Possible**	It is **possible** that the local community will be able to successfully take advantage of the opportunity available, within their existing capacity.			
2	**Unlikely**	It is **unlikely** that the local community will be able to successfully take advantage of the opportunity available, within their existing capacity.			
1	**Highly Unlikely**	It is **highly unlikely** that the local community will be able to successfully take advantage of the opportunity available, within their existing capacity.

Figure 4-4: Social Opportunity Reference Table

4.3. Impact Themes and Categories

The Town's LPP/06 refers to the IAIA Guide in relation to the matters that should be considered as part of a social impact assessment, see **Figure 2-1: LPP/06 Social Impact Assessment Categories.**

Circle typically adopts three thematic areas of impact that cover the IAIA Guide matters:

1. Community Health, Wellbeing and Amenity
2. Culture and Society
3. Local Economic Participation

Figure 4-5 shows that the themes can be considered as part of a circle of mutually supportive and interactive concepts that can create sustainable community development in a local society.

Figure 4-5: Circle of sustainable community development

Table 4-2 sets out the interaction between the themes and the IAIA Guide (also Town policy) and provides some examples of how risk and opportunity conditions might arise and some of the resultant impacts that might occur.

Table 4-2: Impact Themes and Categories

Impact Themes and Categories		
Community Health, Wellbeing and Amenity		
IAIA Matter	**IAIA Description**	**Impact Examples**
Community	Its cohesion, stability, character, services, and facilities.	Change in the current land use results in the current land users transferring their activities to other locations, which then causes benefit or detriment to the residents of the communities

Impact Themes and Categories		
		surrounding a project site or the other places, e.g. transfer of detrimental social behaviours from one place to another.
Environment	The quality of air and water people use, the availability and quality of the food they eat, the level of hazard or risk, dust and noise they are exposed to, the adequacy of sanitation, their physical safety, and their access to and control over resources.	Dust and noise during construction and noise during operations of a project may have a detrimental effect on nearby residents.
Health and Wellbeing	People's physical, mental, social and spiritual wellbeing.	A variety of potential impacts arising from the construction and operations (mainly) of a project that (typically) detrimentally impact people's lives. For example, the SHRA facility conditions and their interaction with guests and residents causes psychosocial impacts.
People's fears and aspirations	Their perceptions about their safety, their fears about the future of their community, and the future of their children.	People's understanding of the scale and nature of a project and perceptions of how any risks arising from a project might be managed, or how opportunities from a project might benefit them.
Political Systems	The extent to which people can participate in decisions that affect their lives, and the resources provided for this purpose.	The planning approval process run by the local and state authorities and the level of engagement that is afforded to those who wish to have a say in how a development occurs. Processes associated with the recognition and protection of Native Title and Aboriginal Cultural Heritage and the extent to which Kariyarra people can avail themselves of these systems.
Culture and Society		
IAIA Matter	**IAIA Description**	**Circle Impact Examples**
Way of Life	How people live, work, play and interact with one another on a day-to-day basis.	Current land use and surrounding residents' interaction with it and whether and how this will change if a project is developed.

Impact Themes and Categories		
Culture	People's shared beliefs, customs, values and language or dialect (including Aboriginal culture and connection to country).	The nature of the Aboriginal Traditional Owner (TO) community (native title holders) and their beliefs, customs and values as TOs and within the context of the broader community culture.
Community	Its social cohesion, stability, character, services, and facilities.	The impact of a project development on existing social relations within a community, e.g., whether a project development gives rise to the exclusion and marginalisation of vulnerable groups or allows for all community sectors to participate appropriately.
Local Economic Participation		
IAIA Matter	**IAIA Description**	**Circle Impact Examples**
Personal and property rights	Particularly whether people are economically affected or experience personal disadvantage which many include a violation of their civil liberties.	Whether the development of a project has an impact on land and property prices, or a project's activities give rise to criminal and anti-social behaviour.

5. Community and Stakeholder Engagement

5.1. Grounded SHRA Community and Stakeholder Engagement

Grounded have commenced community and stakeholder engagement for the SHRA Development and through this introduced Circle as the independent consultant contracted to carry out the SIA.

Grounded's engagement included the identification of and engagement with a range of selected stakeholders and included two community meetings that were advertised to all surrounding residents through a flyer drop to some 400 of the surrounding residences.

Grounded also engaged directly with the following organisations:

- BHP
- Department of Communities
- Department of Training and Workforce Development / North Regional TAFE
- Development WA
- Horizon Power
- Individual nearby residents
- Kariyarra Aboriginal Corporation
- Local Sporting Clubs
- Mirnutharntu Maya Student Accommodation
- North Regional TAFE
- Pilbara Development Commission
- Pilbara Port Authority
- Port Hedland Chamber of Commerce and Industry
- Port Hedland International Airport
- Port Hedland Ratepayer Association
- Seventh Day Adventist Church
- South Hedland High School
- South Hedland Police
- South Hedland Primary School
- Town of Port Hedland
- Various Local Businesses
- WA Country Health Service
- Water Corporation
- Wirraka Maya Health Service Aboriginal Corporation
- Youth Involvement Council

As is normally the case, not all identified stakeholders were available to participate in discussions with Grounded about the SHRA Development; however, it is advised that their stakeholder engagement and consultation effort will continue, as is proper, throughout the development of the SHRA Development.

Grounded's stakeholder engagement started in December 2024 and on ground consultations occurred in Port Hedland from early March 2025. These were followed immediately by the SIA consultations.

5.2. Circle SIA Stakeholder Engagement and Consultation Methodology

Circle adopts a specific process and methods regarding Community and Stakeholder Engagement for undertaking SIA.

This involves the following stages:

1. Identification
2. Categorisation and Prioritisation
3. Analysis

This methodology ensures the engagement approach is effective and appropriate to the level of interest of the stakeholder.

In the SHRA Development SIA Scoping Workshop, an initial identification and assessment of stakeholders was undertaken. Subsequently, for this SIA Report, the following steps have been undertaken.

1. Review of the Grounded identified SHRA Development stakeholders identified against the existing information held by Circle from previous SIAs in the area.
2. Categorising and prioritising each accordance with potential impact and interest.
3. Conducting an initial analysis to:
    - identify potential concerns, needs and interests, and aspirations, and
    - make an initial prediction of their influence and sentiment toward the project.

This analysis allowed for initial engagement approaches to be determined noting that this was a preliminary internal assessment and that external stakeholders may take a different view of where they might sit in the interest and impact context.

Further, stakeholder identification and positioning will change over time as project development progresses, engagement and consultation is carried out and stakeholder become more aware of the project and its impacts.

5.2.1. Stage 1: Identification

Stakeholders are identified through looking at three primary societal sectors: public, community and private. Addressing each of these sectors helps ensure that the widest range of stakeholder groups and organisations are identified.

This process allows for the development of a comprehensive stakeholder list that can then be refined through the categorisation, prioritisation, analysis and mapping process as set out in Table 5-1 below.

Table 5-1: Stakeholder Identification by Societal Sector

Societal Sector	Description
Public	State and Commonwealth Government agencies, elected representatives, local and regional government councils, statutory authorities, government and public coordination committees and boards, regional economic development committees, government funded educational institutions and public RTOs, and international intergovernmental organisations.

Societal Sector	Description
Community	This sector can also be described as 'civil society', the sector of society that is distinct from government and business, or a notional aggregate of non-governmental organisations and institutions. It can include Aboriginal people, their communities and organisations, local community residents, vulnerable societal groupings, such as women, youth and the disabled, community led regional health organisations, environment groups (regionally and non-regionally based), Not for Profits, For Purpose organisations and social enterprises, volunteer community groups, sporting associations, and the general public and media.
Private	Privately-owned for-profit enterprises including landowners, agricultural, horticultural and pastoral interest holders, business groups and industry associations, resources sector industry and infrastructure interest holders, local and regional businesses and service providers, and other private interest holders such as private Registered Training Organisations (RTOs.

Throughout the stakeholder engagement and consultation process, additional organisations may be identified and contacts made through discussion with local stakeholders.

5.2.2. Stage 2: Categorisation and Prioritisation

Typically, stakeholders vary greatly in the effect that a project might have on them, as does their interest in and sentiment toward a project.

Communities are complex and dynamic social environments with many moving parts.

So, the next lens through which stakeholders are viewed is that of their 'potential impact from' and therefore 'interest in' the project, which allows for those who are potentially most affected by the social, cultural and economic impacts a project to be identified and focused upon.

Stakeholders are categorised as being:

- **Directly Affected** by the project,
- **Directly Interested** in the project,
- **Indirectly Interested** in the project, and
- **Generally Interested** in the project.

This approach to stakeholder categorisation depicted in Figure 2 below has been adapted from a framework developed for SIA in the Northern Territory by the University of Queensland's Sustainable Minerals Institute's Centre for Social Responsibility in Mining (SMI-CSRM)[15] – they refer to as nesting.

[15] Framework for Social Impact Assessment

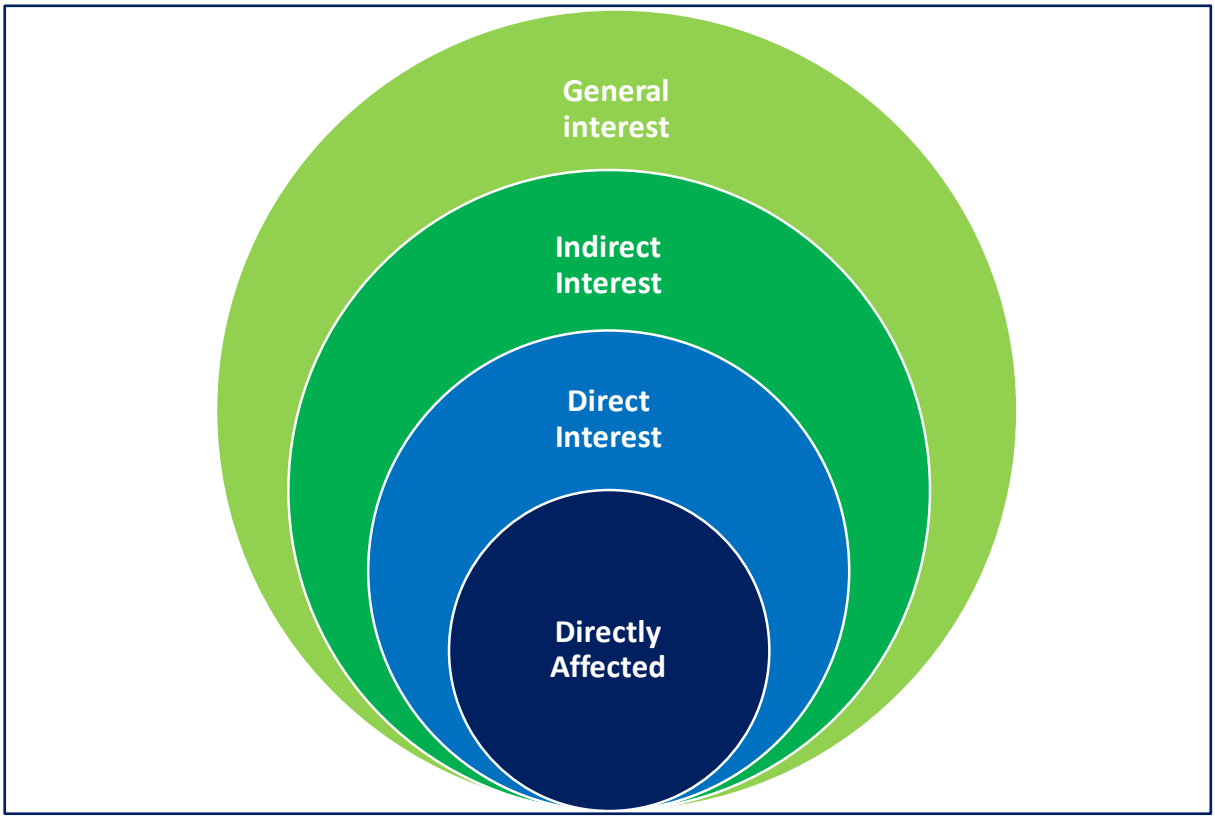

Figure 5-1: Impact and interest circles

These categories help guide the level of stakeholder engagement in a manner that is consistent with the nature of their interest in the project and levels of likely impact from the development of the project. The effort applied to community engagement and consultation should also be commensurate with the level of interest and impact.

Consequently, the greatest effort and priority in engagement and consultation is given to those most directly affected by the project, followed by those with a direct interest in the project. Engagement and consultation with those with an indirect interest or with a general interest is also undertaken at the appropriate level according to their concerns, needs and interests, and aspirations.

It is recognised that individuals from stakeholder organisations may have several affiliations, i.e., hold positions in more than one stakeholder group. For example, a local business owner may also be a member of a Local Council and be active in local community or sporting groups. These affiliations are considered where known / practicable in the engagement approach.

5.2.3. Stage 3: Stakeholder Analysis

A two-step approach is taken to analysing stakeholder relevance.

The first step involves a preliminary assessment and articulation of what each stakeholder might be concerned about, what their needs and interests are and their aspirations for the future; and how this might relate to the project involved.

Table 5-2 below provides examples of the predicted concerns, needs and interests and aspirations of some relevant stakeholder types.

Table 5-2: Preliminary stakeholder concerns, needs, interests and aspirations analysis

Subcategory	Interest and Impact Category	Concerns	Needs and Interests	Aspirations
Native Title Holders	Directly Affected	• recognition and respect as traditional owners of the land • cultural heritage • missing out on beneficial opportunities	• information and engagement • meaningful and authentic relationships • knowledge and understanding	• financial benefit • jobs, business contracts, housing • improved social and economic outcomes • greater community amenity and social cohesion
Local Residents	Directly Affected	• noise, odours and dust during construction and operations • visual amenity	• information and regular communication	• greater community amenity and social cohesion • community benefit • local employment
Local Suppliers	Direct Interest	• business certainty and contract extensions • loss of business	• regular income • site health, safety and environment conditions • Company success	• continued business participation • growth and profitability
Local Government	Direct Interest	• little or no benefit from a project and / or uncontrolled detrimental impact • regulatory non-compliance	• regulatory compliance • information and regular communication	• greater community amenity and social cohesion • community benefit • financial benefit (fees, rates)

Stakeholders' concerns, needs, interests and aspirations, and their influence and sentiment toward the project will change over time. Changes can reflect the level and quality of engagement undertaken, the extent to which they feel they have been able to meaningfully participate in project

planning, and the perception they form about the proponent's approach to managing project impacts.

The second step of the analysis involved mapping stakeholders on an influence and sentiment matrix, that is, developing a preliminary view of the extent to which identified stakeholders can influence a project and how they might feel about the project development.

Table 4-4 below shows an example of an influence and sentiment matrix

Table 5-3: Influence and sentiment matrix

Influence	Positive	Neutral	Negative
High	**Keep involved and engaged**	**Keep engaged**	**Engage to understand**
Medium	**Keep informed**	**Keep engaged**	**Engage as required**
Low	**Keep informed**	**Keep informed**	**Engage as required**
	Sentiment		

The matrix uses nine rankings arising from the confluence of influence and sentiment. These are divided into five forms of guidance to engagement approach:

- Keep Involved and Engaged: these influential stakeholders are in favour of project success and so it is important to keep them informed and engaged and to meet their needs to the extent that is needed and appropriate.

- Keep Informed: while these stakeholders have lower levels of influence over project success, they are either in favour of the project or take a neutral view, it remains important to keep them informed regularly with information about project progress.

- Keep Engaged: these stakeholders have a medium to high level of influence over project success but typically take a neutral or objective position as to a project's merits. It is important to remain engaged with these stakeholders to ensure their needs are met.

- Engage as Required: these stakeholders have a low to medium influence and hold a negative disposition.

- Engage to Understand: these influential stakeholders may typically not be in favour of a project and so may actively oppose project approvals.

The SIA consultation process aims to engage and consult with a statistically relevant sample size of a cross section of the development project's stakeholders in the community, private and public societal sectors.

Consultation with stakeholders relies on their availability, i.e., time, space, ability and willingness. Meaningful consultation with stakeholders relies on the approach taken and the information provided, e.g., with content that can easily be understood by different stakeholders and ensuring that all subsectors can participate in consultations if they wish.

This is particularly the case for engagement with Indigenous peoples and vulnerable groupings within a community.

At the same time, the level of effort expended in engaging with stakeholders should be commensurate to the scale and nature of the activity involved, appropriate in the circumstances and consistent with Grounded's business policy and practice.

5.3. Community and Stakeholder Participation

Circle adopts and / or recommends to development proponents to adopt an approach to their community engagement and consultation programs that considers best practice public participation such as the International Association for Impact Assessment (IAP2), Quality Assurance Standard for Community and Stakeholder Participation[16]. The IAP2 Public Participation Spectrum provides a high-level explanation of the IAP2 approach as shown in Figure 5-2 below.

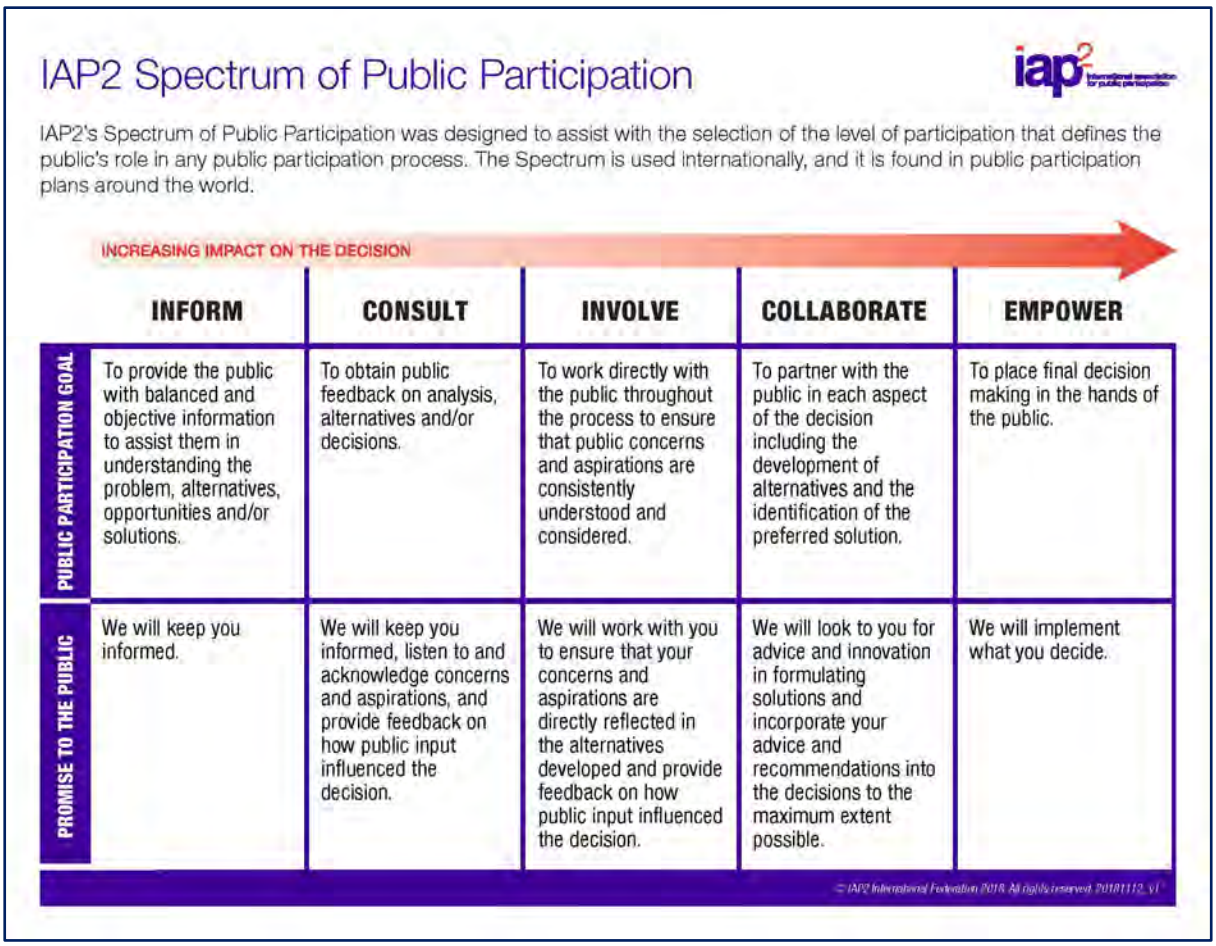

Figure 5-2: IAP2 Public Participation Spectrum

It is Circle practice to map the outcomes of the initial stakeholder identification and analysis against the IAP2 spectrum to identify the type of engagement that is appropriate for each stakeholder depending on their impact and interest.

The application of the Circle methodology for the SHRA Development is set out in the following section.

[16] https://iap2.org.au/resources/quality-assurance-standard/

6. SHRA SIA Stakeholder Analysis and Engagement

In November 2024, Circle facilitated a workshop with key members of Grounded's Executive Management Team with intimate and multidisciplinary knowledge of the SHRA Development.

The output from that workshop was incorporated into this SIA and in the stakeholder identification and analysis below. Table 9-1 sets out the stakeholders identified by societal sector and Table 9-2 the identified stakeholders by impact and interest.

Table 6-1: Stakeholders by Societal Sector

Sector	Stakeholders
Community	Aboriginal Legal Service, Kariyarra Aboriginal Corporation RNTBC (KAC) (for Kariyarra people), Hedland Well Women's Centre, Local Residents, local and State media, Mirnutharntu Maya, Pilbara Community Legal Service, Port Hedland Adventist Fellowship, Port Hedland Ratepayer's Association, the broader South Hedland community, the Youth Involvement Council (YIC).
Private	BHP, hotel and motel operators, ESS Gateway Development, FMG, local businesses, Port Hedland Chamber of Commerce and Industry (PHCCI), and Port Hedland Industries Council (PHIC).
Public	Dept. of Communities and Housing (DOCH), Dept. of Lands, Planning and Heritage (DPLH), Development WA, Hedland High School, Horizon Power, North Regional TAFE, Pilbara Development Commission (PDC), Regional Development Assessment Panel (RDAP), Town of Port Hedland, WA Country Health Service (WACHS), WA Police (WAPOL) and Water Corp.

Table 6-2: Stakeholders by Category

Impact / Interest Category	Stakeholders
Directly Affected	Kariyarra people and KAC, Local Residents, North Regional TAFE, and Port Hedland Adventist Fellowship. Potentially also WA Country Health Service (WACHS), WAPOL, and local community organisations such as the Aboriginal Legal Service, Mirnutharntu Maya, Pilbara Community Legal Service, Youth Involvement Council (YIC), Hedland Well Women's Centre, Wirraka Maya Health Service Aboriginal Corporation.
Direct Interest	Ashburton Aboriginal Corporation, Bloodwood Tree Association, DOCH, FMG, Pilbara Development Commission (PDC), Port Hedland Chamber of Commerce and Industry (PHCCI), Town of Port Hedland, Department of Planning, Lands and Heritage (DPLH), Development WA.

Impact / Interest Category	Stakeholders
Indirect Interest	BHP, Care for Hedland, ESS Gateway Development, Fortescue Metals, Hedland Senior High School, Horizon Power, Pilbara Ports, Port Hedland Industries Council (PHIC), Port Hedland Ratepayers Association.
General Interest	Broader Port and South Hedland communities, local and State media.

The community and stakeholder engagement that occurred for this SIA involved the following:

1. Identification and initial letter email contact by Grounded with introduction to Circle as SIA consultant.
2. Direct contact from Circle with introductory letter, Circle Guide to the SHRA SIA for Stakeholders document, and a Grounded SHRA Development brochure.
3. On ground face to face meetings and initial consultations during the period 3 – 10 March 2025.
4. Follow up contacts by email and telephone with those already met and those not yet met, during the period 10 – 21 March 2025, providing:
    a. Circle SIA Participation Principles
    b. Circle Guide to the SHRA SIA for Stakeholders
    c. Circle Social Risk and Opportunity Reference Tables and Matrices
    d. Circle SIA Participant Led Social Risk and Opportunity Assessment Form
5. Further email exchanges and telephone contacts as required to affirm understanding and to provide feedback about how their input has been treated in the SIA.

The list of stakeholders identified and contacted was based on that provided previously by the Town, Grounded and augmented by Circle in accordance with its experience in stakeholder engagement with the public, private and community sectors of society, in Port Hedland plus advice from key stakeholder contacts.

Those identified included:

1. Aboriginal Legal Service
2. Ashburton Aboriginal Corporation
3. BHP
4. Bloodwood Tree Association
5. Care for Hedland
6. Dept. of Communities and Housing
17. Pilbara Development Commission
18. Port Hedland Adventist Fellowship
19. Port Hedland Chamber of Commerce and Industry
20. Port Hedland Community Progress Association[17]
21. Port Hedland Industries Council

[17] It was not able to be established that this organisation exists anymore.

7. ESS Gateway Development
8. Fortescue Metals
9. Hedland Senior High School
10. Hedland Well Women's Centre
11. Horizon Power
12. Kariyarra Aboriginal Corporation
13. Local Residents
14. Mirnutharntu Maya
15. North Regional TAFE
16. Pilbara Community Legal Service
22. Port Hedland Ratepayer Association
23. South Hedland Police Station
24. Town of Port Hedland
25. WA Country Health Service
26. Wirraka Maya Health Service Aboriginal Corporation
27. Youth Involvement Council

It is important to note that while not all the above stakeholders responded or were available for engagement and consultation while the SIA was being developed, they are all important stakeholders for ongoing engagement. Of the above 27 stakeholder organisations or groupings identified, 20 (74%) were engaged successfully either face to face, through online meetings or over the telephone.

It is noted that stakeholder participation in SIA is dependent upon stakeholder availability. There are many reasons why stakeholders are not available to participate in discussions about social impact and that can include that: they are not interested; they have other greater priorities; they don't feel capable of contributing meaningfully; they don't understand and / or trust the process, the regulators or the consultant; there have been changes in organisational capacity, staff and leave; disconnected telephone numbers, weather events; holidays and community events; and cultural obligations in times of ceremony and / or sorry business in the case of Aboriginal communities.

During consultations Circle explained the SHRA Development, the SIA process and asked stakeholder organisational representatives to help identify possible social impacts, their thoughts about the likelihood of them happening and the consequences if they did.

Importantly, stakeholders were asked about what they think can be done to manage any social impacts that might arise from the SHRA Development project, and how they would best be measured.

When consultations occurred, the approach taken was that of:

1. Introducing the topic including the policy and regulatory context.
2. Explaining Grounded's proposal for the SHRA Development.
3. Explaining Circle's Participation Principles.
4. Discussing social impact, risk and opportunity, assessment method, including impact themes.
5. Discussing initial thoughts about risk and opportunity.

6. Seeking further input once the participant had been able to take the time to give through to the discussion and following this up with emailed information and a participant-based impact assessment form.

Where consultation participants did provide a contribution, either verbally or in writing, feedback was provided to ensure an understanding of the impacts covered and that the information gathered was correct.

Notes from each stakeholder engagement were then collated and content analysis was undertaken to distil the key impacts identified and then used and to inform the impact assessment in the following section and the subsequent framework SIMP in **15 Management Planning**.

Commensurate with the size and nature of the project, no focus groups, community meetings, advertising, social media or other planned public communications were employed.

While not all stakeholders provided formal input into the SIA process, the extent of consultation undertaken exhausted the range of issues, concerns and aspiration such that no new matters were likely to be identified with further consultation.

6.1. Future Stakeholder Engagement

The best way to ensure best practice and practical management of social and economic risk and opportunity is through continued communication with local stakeholders. The subjective nature of potential socio-economic and cultural impacts can make it difficult to assess and predict risks and opportunities with accuracy, and so good impact management requires interdisciplinary thinking and the contribution of specialists in various fields.

SIMP Key Performance Indicators (KPIs) and metrics, if constructed properly, can provide the basis for adaptive impact management and a baseline for longitudinal measurement of change. Stakeholder input into the design of these is critical at the front end as it is often stakeholder organisations that provide the data that allow outcomes to be measured.

It is recommended therefore that Grounded continue direct stakeholder engagement with the relevant organisations for the development and implementation of its SIMP for the SHRA Development, noting that the approach needs to be consistent and commensurate with the level of their activity.

Participation in existing and relevant local fora, is the best way to achieve this, rather than seeking to establish new structures and engagement platforms.

7. SHRA SIA Boundaries

Social Impact Assessment needs to consider a project in terms of its social and statistical, geographical, temporal (time) and contextual boundaries.

- Social and statistical boundaries can be described as discrete areas within which a population (or community) interacts socially and economically, and which can be measured using census and other information.
- Geographical boundaries, as the name suggests, represents the geographical area within which impacts can be expected to occur.
- Temporal boundaries relate to the progression of time and its relation to events and the timing of activities. Examples include the length of the project being considered and the various stages of the project, e.g., planning, construction, operations and decommissioning, as well as the temporal cycles associated with development planning and affected community time / event cycles.
- Contextual boundaries relate to the extent of matters considered in an SIA, i.e., those that while important to the broader social and economic environment, are reasonably within or without the scope of the SIA being developed.

Each of these, as they apply to SHRA Development, is explained in the following subsections.

7.1. Social and Statistical

The Australian Bureau of Statistics (ABS), standards, including the Australian Statistical Geography Standard (ASGS)[18] statistical boundaries structures provide a very important and useful basis for putting appropriate statistical boundaries around the areas to be considered from a social impact perspective.

The relevant Australian Bureau of Statistics (ABS) geographical areas for the SHRA are:

- Port Hedland Local Government Area (LGA)
- South Hedland Statistical Area (SA2)

The smallest level statistical area is known as a Statistical Area Level 1 (SA1). SA1s have a population of between 200 and 800 people with an average population size of approximately 400 people. They are designed to be either predominantly rural or predominantly urban in character, with SA1s in rural and remote areas generally having a lower population than in urban areas.

The next level is Statistical Area Level 2 (SA2). SA2s are described as "*medium-sized general-purpose areas built up from whole Statistical Areas Level 1. Their purpose is to represent a community that interacts together socially and economically*[19]".

SA2s are the smallest area determined by the ABS for which non-Census and intercensal statistics are made available. SA2s generally have a population range of 3,000 to 25,000 and are often consistent with Suburbs and Localities, and Indigenous Locations.

[18] ABS Statistical Geography Standards

[19] ABS SA2 Definition

Figures 7-1 and 7-2 below show the South Hedland SA2 and the Port Hedland LGA.

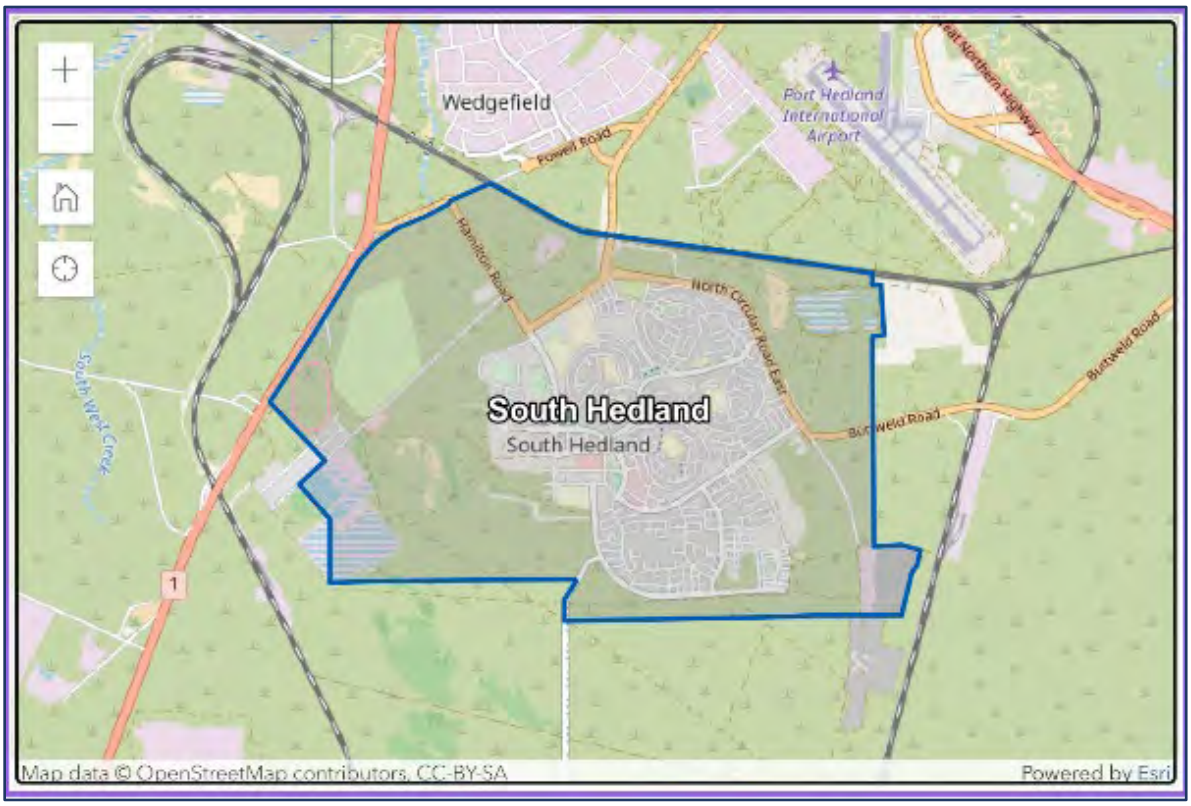

Figure 7-1: South Hedland SA2 Map

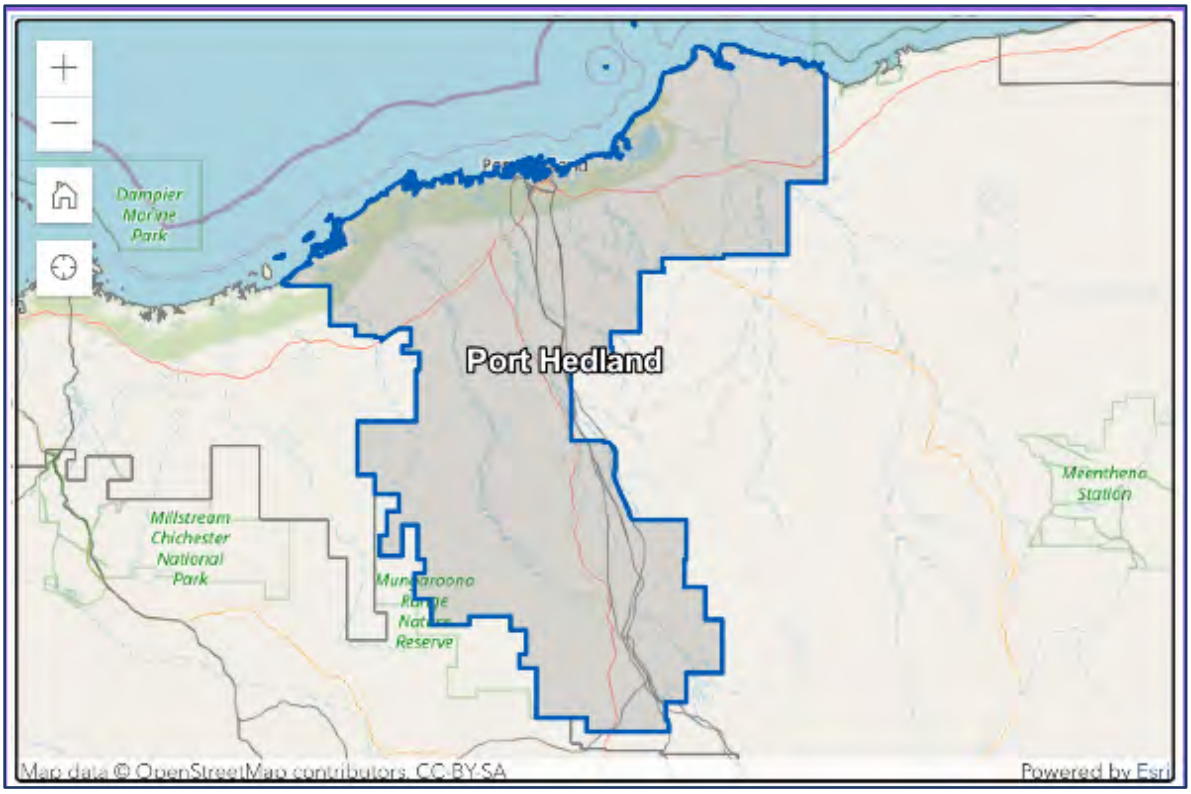

Figure 7-2: Port Hedland LGA Map

Where relevant comparisons are required throughout this Scoping Study, reference to regional, state and Australian statistical areas and sources are made.

7.2. Geographical and Administrative

The geographical and administrative areas that are relevant to the SHRA and shown in the series of Figures overleaf are:

- Fig. 7-3: WA Planning Regions – Pilbara.
- Fig. 7-4: Town of Port Hedland LGA.
- Fig. 7-5: Town of Port Hedland Local Planning Strategy 2021.
- Fig. 7-6: Local Planning Precincts – South Hedland.
- Fig. 7-7: South Hedland Local Planning Strategy 2021.
- Fig. 7-8: South Hedland Planning Zones.

A key guidance document is the Town of Port Hedland Local Planning Strategy 2021 (Local Planning Strategy) and within this, the primary zones of relevance are the South Hedland Future Housing Zones Map in Fig. 7-6.

Figure 7-3: WA Planning Regions

Figure 7-4: Town of Port Hedland LGA

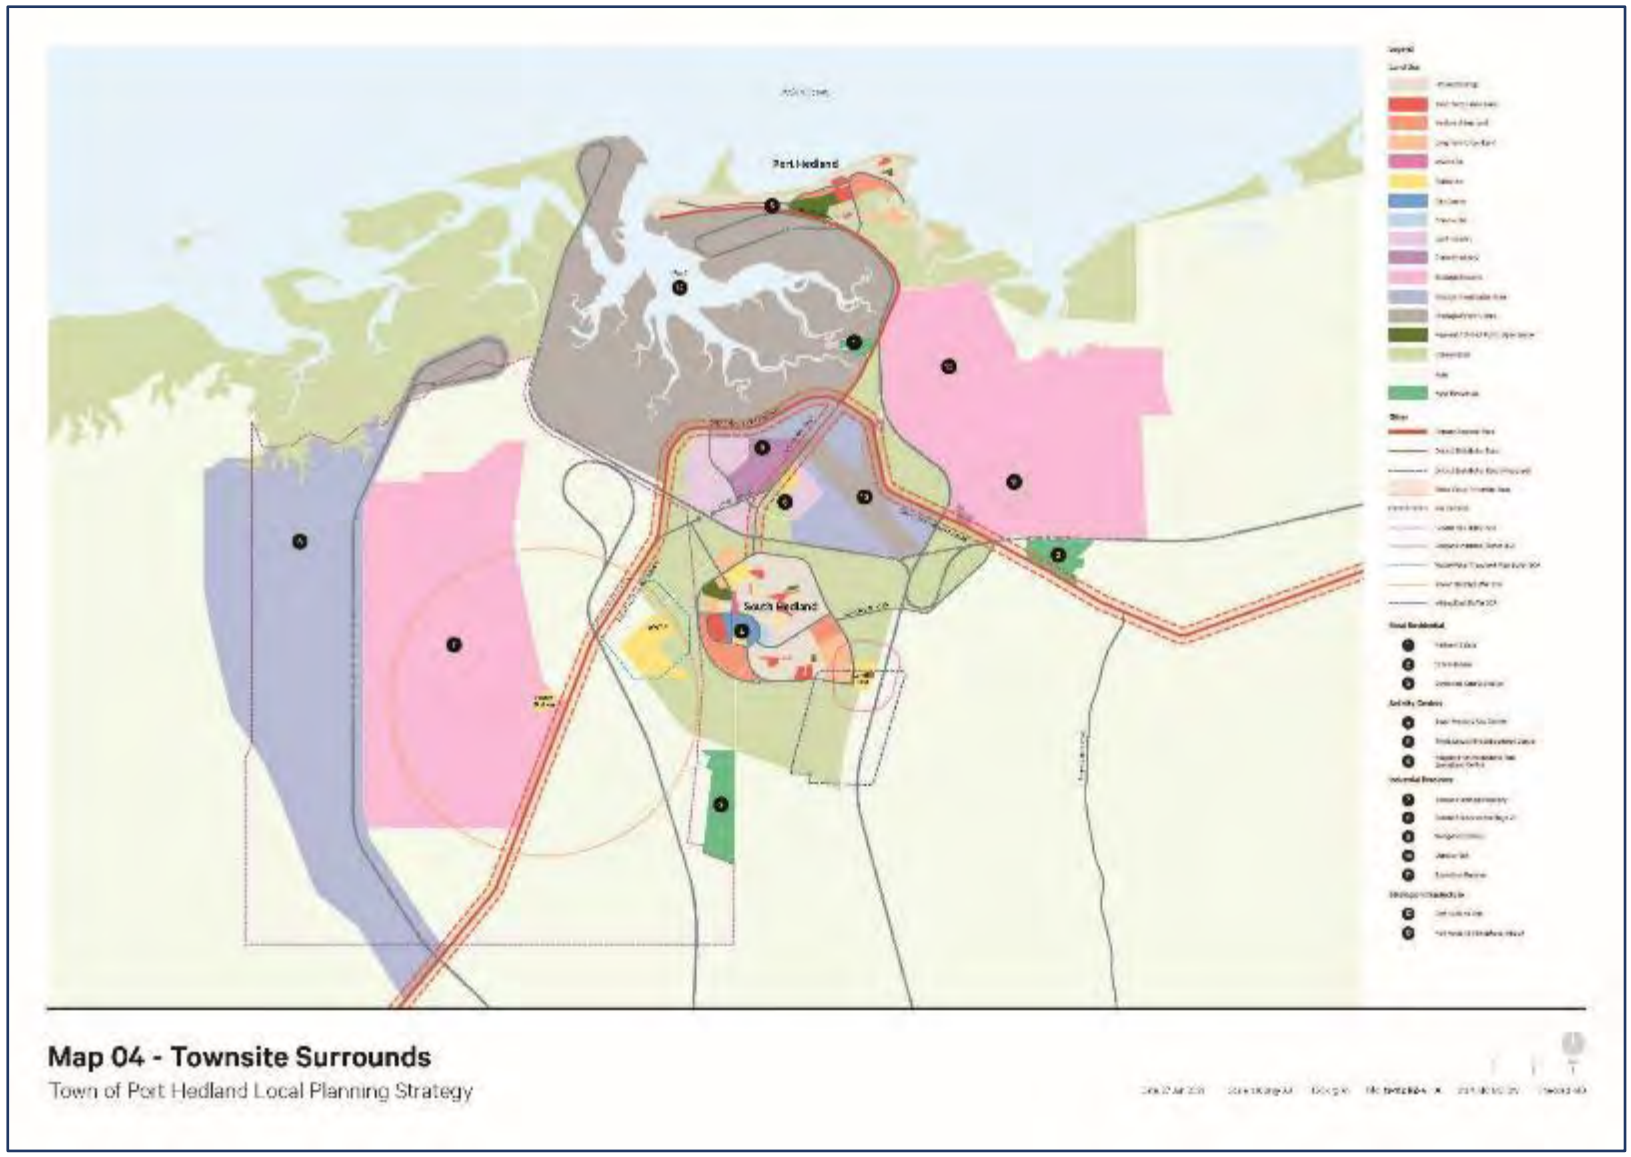

Figure 7-5: Town of Port Hedland Surrounds

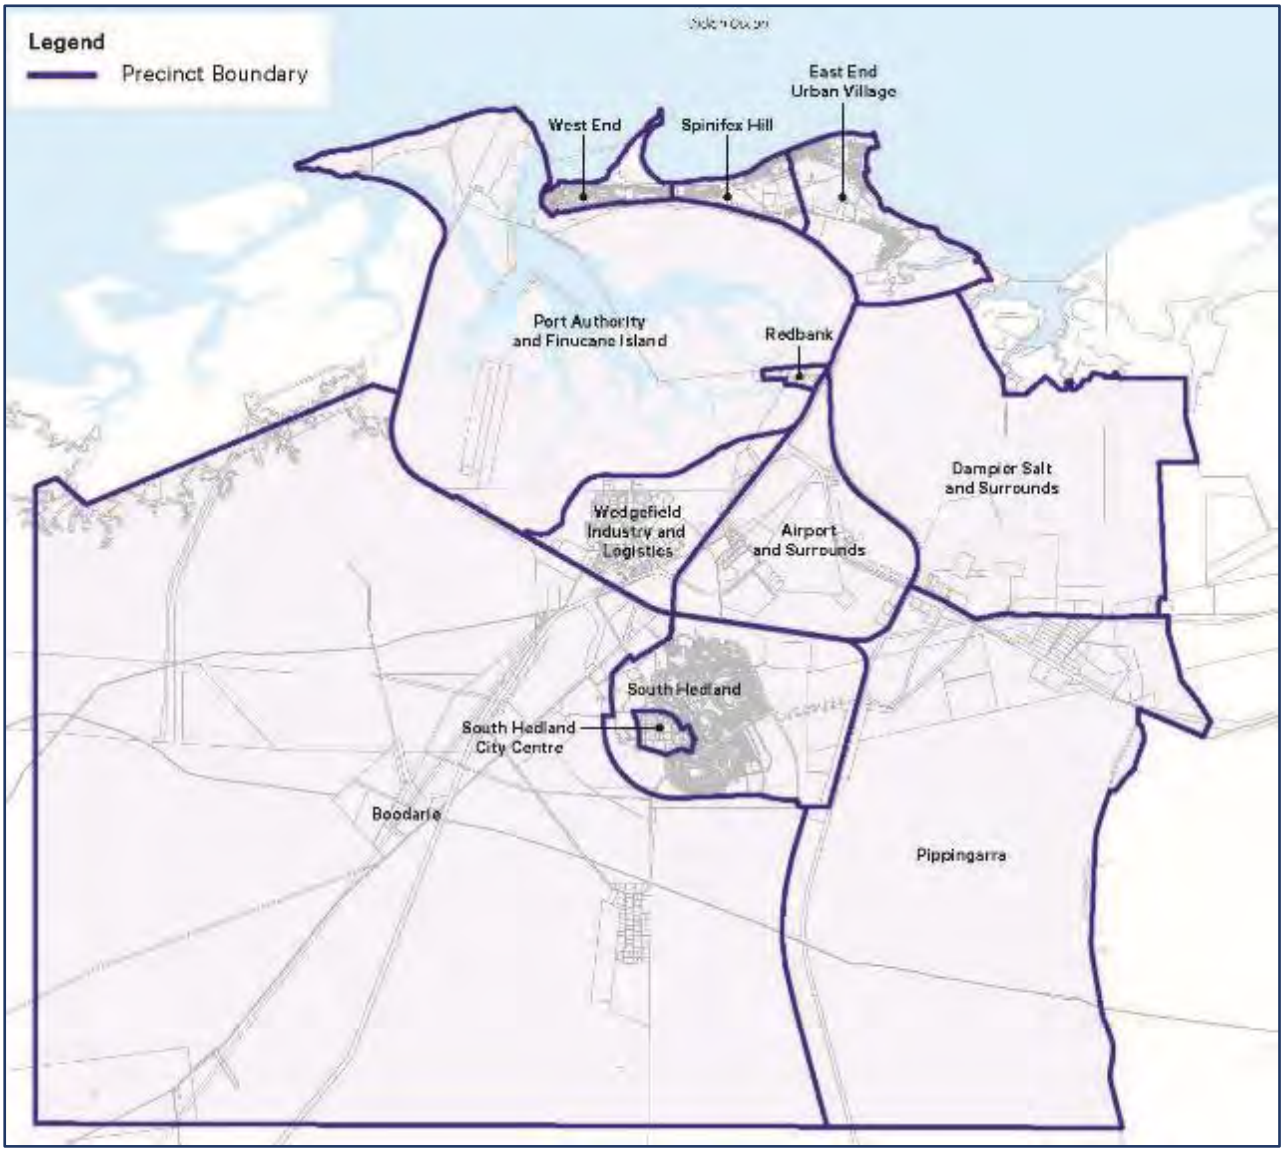

Figure 7-6: Town of Port Hedland Local Planning Precincts

Figure 7-7: South Hedland Local Planning Strategy (2021)

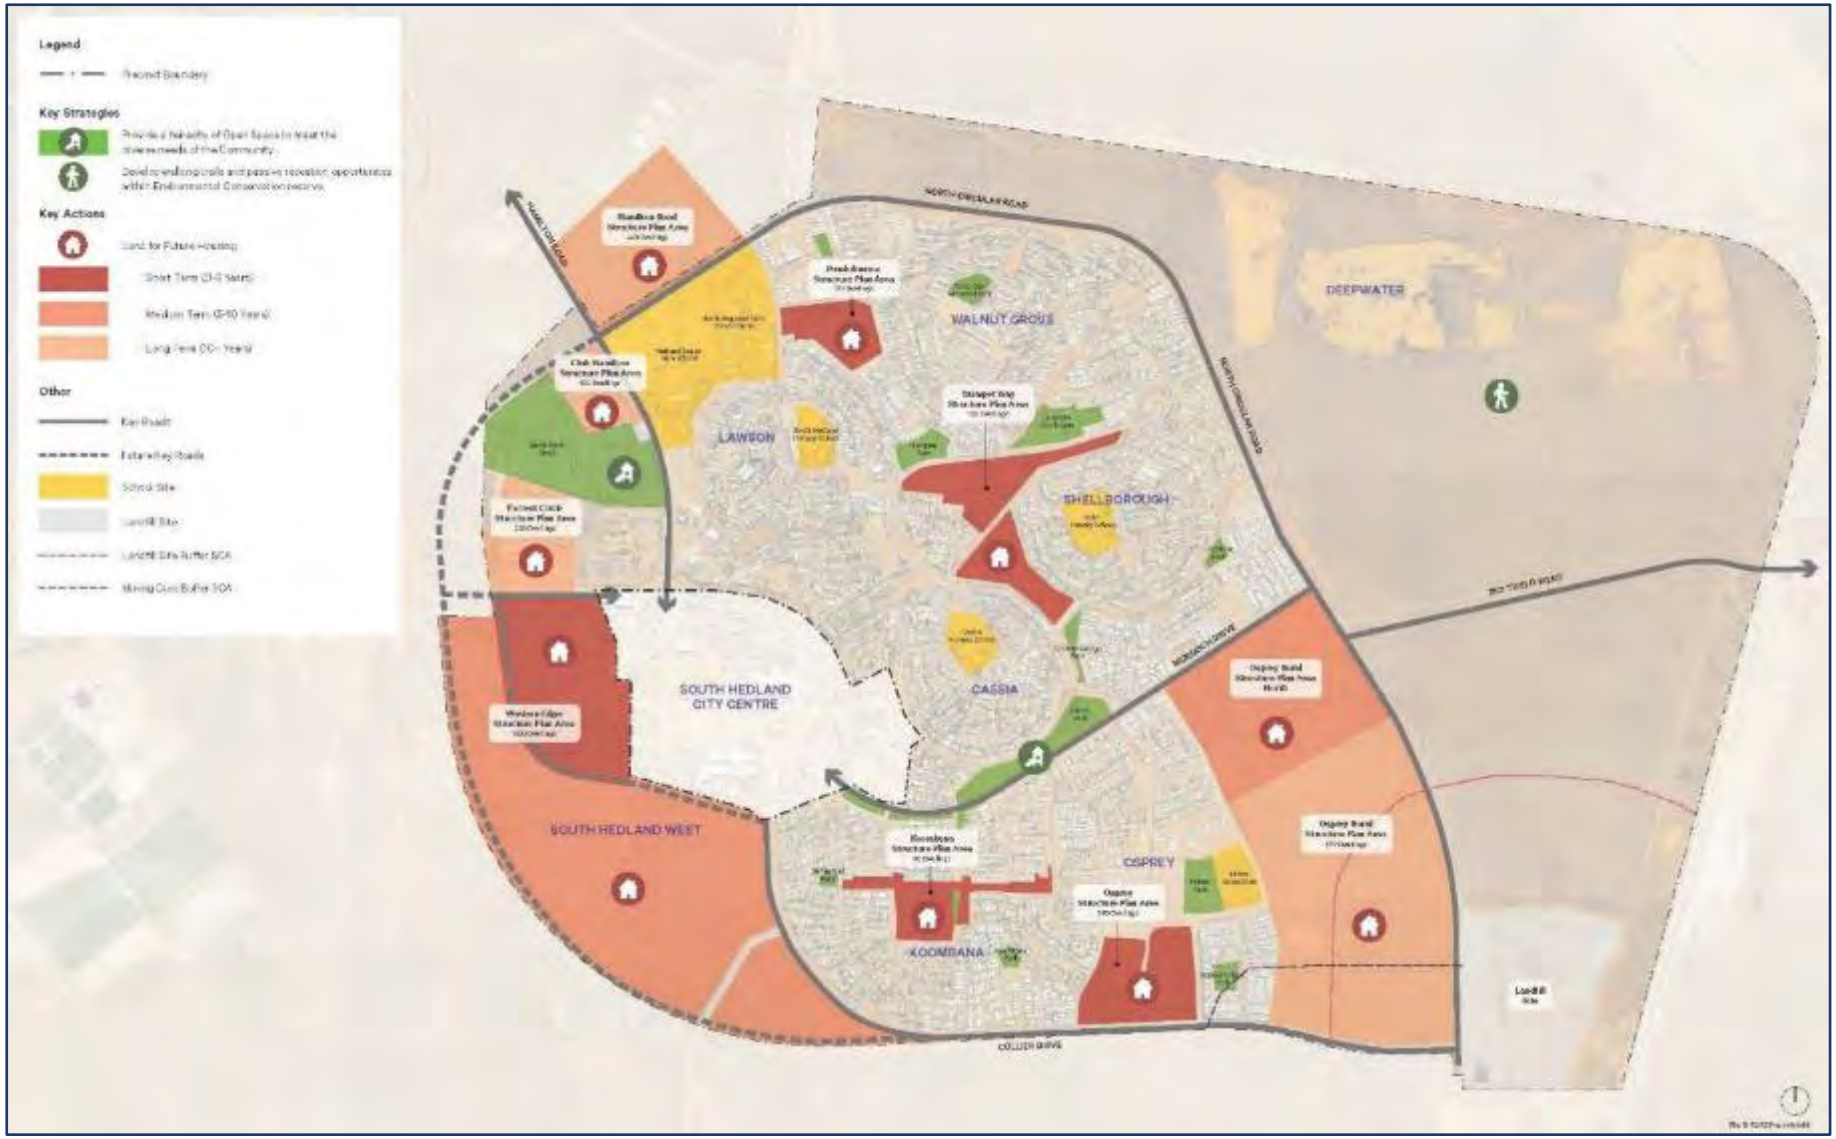

Figure 7-8: South Hedland Planning Zones Map

The SHRA Development is to be developed on the Pundulmurra Structure Plan land parcel in dark red in Figure 7-8 above. According to the Town of Port Hedland Planning Strategy 2021[20], the aspiration for the land parcel is for Short Term Urban Land – contemplating a time horizon of 0 – 5 years. Medium term (5-10 years) and Long Term (10+ years) housing zones are shown in light red and pink respectively.

It is important to note that the land is not currently zoned for housing under the Town of Port Hedland Planning Scheme LPS7[21] and is zoned as Urban Development which contemplates an intention of future land use and a basis for more detailed structure planning in accordance with the Scheme.

This zoning provides for a range of residential densities, a variety of residential accommodation and for the progressive and planned development of future urban areas for residential purposes and for commercial and other uses normally associated with residential development.

7.3. Temporal

Temporal elements are those related to variations and differences between the development proponent's corporate and project priorities, administrative approvals processes and the community and social aspects and perceptions of time and space.

For example:

- Grounded purchased the freehold site in 2024 for the purposes of the SHRA Development with a view to commence occupation in 2026 for a minimum ten-year period.
- The SHRA Development will comprise of initially 15 two storey, 3-bedroom / 3-bathroom townhouses and single level villas sufficient to house approximately 250 people. The permanent housing will have a design life of 30 to 40 years catering for workers requiring long term accommodation in the region.
- The construction period of SHRA would be 12 to 18 months from DA approval and the operations period for the Villas and facilities for further 10 years i.e. 2026 to 2036. The Townhouses would provide accommodation beyond 2046.
- The Local Planning Strategy contemplates a 15-year time frame: 2021 to 2036 and the Town's future is both enabled and limited through the provisions of the *Planning and Development Act 2005 (WA)* (PD Act).
- Kariyarra people have a sense of time over which they consider and plan for their current and future existence including social, cultural and economic development. In essence, as the Hedland area is within their traditional lands, it is home for them and so the time frame is infinite.
- Other South Hedland residents have a sense of time over which they consider and plan for their current and future existence including their time in Hedland. Depending on where they originally come from and their social, cultural and economic development aspirations, this may be finite.

[20] https://www.porthedland.wa.gov.au/Profiles/porthedland/Assets/ClientData/LST-Town-of-Port-Hedland-Local-Planning-Strategy.pdf

[21] https://www.wa.gov.au/system/files/2025-02/port_hedland_7_scheme_text.pdf

These are all relevant in considering social impacts, as are the following contextual matters.

7.4. Contextual

The applicable contextual issues and boundaries include:

Town policy imperatives:

- the impact that non-permanent residential FIFO / DIDO workers have on the housing supply market in South Hedland,
- impacts on supply and demand for services and facilities, and
- balancing the need for adequate levels of TWA to cater for short to medium term operational and construction workers, against the desire for a more permanent and integrated skill led workforce in the Town.

Town planning perspectives:

- South Hedland Place Plan
- South Hedland Integrated Sports Hub (SHISH)
- The Aquatic Service Level Review and Master Plan
- Civic Communities Centre

State development planning perspectives:

- Regional Development Assessment Panel (RDAP)
- Development WA's Regional Development Assistance Program

7.5. Town Development and Transient Workers Accommodation Impacts

It is the clear desire of the Town and of many local stakeholders to see the Hedland permanent resident population and workforce develop alongside industry; however, TWA and the attractiveness of FIFO for many, works against this aspiration. Equally, in times of high commodity prices (iron ore), peak export volumes and constrained labour markets, absent sufficient housing stock, the local housing market becomes highly constrained and unable to accommodate local residential workforce growth.

The same might be said of the local STA market and so there is an important need and purpose for TWA and STA during these times. Another issue raised by all stakeholders is that there is a critical lack of affordable accommodation for Essential Service Workers.

In addition, it is understood that land availability in South Hedland, and in Port Hedland more generally, is constrained due to slower than desired releases of land and spatial factors.

Recognising that the above discourse is broad and complex and takes in a wide variety of matters, a contextual boundary for this SIA is that it will not assess the cumulative impacts of FIFO / DIDO and TWA more broadly, on the local housing market and residential workforce development. It may be that such a cumulative impact assessment is warranted in the broader context of South Hedland's long-term development, but not in the context of this proposal's assessment. The impact analysis, however, does discuss the approach that Grounded intends to take to the eventual transition of the

entire landholding to permanent housing (in addition to the 15 Townhouses contemplated in the proposed Development Application).

Further information regarding housing and short-term accommodation is provide in **9.8 Housing and Accommodation** and again in **11.6 Housing and Accommodation**.

7.6. Concurrent Proposed Developments

There are several proposed developments within the South Hedland area that may be developed concurrently with the SHRA Development and so may have an impact on the capacity for local economic participation.

These are set out in Table below, noting that the commencement date for most is not known.

Table 7-1: Proposed and Approved Current Developments

#	Development Name	Development Proponent	Nature of Development	Timing
1	Hedland Development Shopping Centre (DAP/24/02824)	Turner River Developments Pty Ltd	Mixed use Retail Shopping Centre, including supermarket, petrol, fast food and day care.	Not known
2	Elements Estate Housing	BHP	43 residential houses to be built commencing in the Elements Housing Estate.	Commencing April 2025
3	South Hedland Service Workers Accommodation	Town of Port Hedland	76 house medium density development for service workers[22].	Not known
4	Essential Workers Development	Rowe Group	32 Grouped Dwellings, 26 Multiple Dwellings, 18 Serviced Apartments and 1 Commercial Tenancy (Office and Cafe/Restaurant)	Not known
5	Tourism and Workforce Development*	Pacific Partners Pty Ltd	Tourist Development and Workforce Accommodation	Not known

[22] https://www.porthedland.wa.gov.au/documents/4110/south-hedland-service-worker-housing-project

#	Development Name	Development Proponent	Nature of Development	Timing
6	Azzura Square Project[23]	Azzura Group	Four luxury residential towers and ground floor shopping centre.	Not known
7	Port Hedland Adventist Fellowship**	Adventist Fellowship	Church and Community Hall	Concurrent with SHRA Development

*This development was not approved by the RDAP and is the subject of State Administrative Tribunal (SAT) review.

**While not yet approved, it is understood that the Adventist Fellowship intends to lodge a Development Application in the first half of 2024.

7.7. Resource Industry and Infrastructure Concurrent Developments

There are a number of planned and proposed resource industry and Infrastructure sector developments, estimated at $70BN capital investment, which are likely to have a significant impact on the TWA and STA demand in the coming years. The commencement timing of most is also not known.

Table 7-2: Resource Industry and Infrastructure Developments

#	Development Name	Development Proponent	Nature of Development	Timing
1	Pilbara Ports Expansion – Lumsden Point	Pilbara Ports	Increased port capacity through the development of two land backed wharves at Lumsden Point.	Commencing 2025
2	BHP Production and Export Expansion	BHP	Increased iron ore production and export and Port Debottlenecking Project	In feasibility.
3	Pilgangoora Lithium	Pilbara Minerals	Development of the broader Pilgangoora lithium deposits and production of spodumene for export through Port Hedland – P2000 Project.	In feasibility.

[23] https://azzurasquare.com.au/

#	Development Name	Development Proponent	Nature of Development	Timing
4	Boodarie Strategic Industrial Area (SIA)	Development WA	4,000ha of 'Strategic Industry' zoned land and is well located close to Port Hedland to promote and facilitate the processing of the State's natural resources in the Pilbara region	Completed
4a	Unknown	POSCO	Lithium Solution with Pilbara Minerals	Not known
4b	Unknown	Fortescue Metals Group	Unknown	Not known
4c	Port Hedland Solar and Battery Project	Alinta Energy	Solar and BESS	Not known
4d	Port Hedland LSM Refinery	Tees Valley Lithium	Raw spodumene processing to produce 40,000tpa – 120,000tpa of primary LSM.	Not known
4e	Australian Renewable Energy Hub (north of Port Hedland)	BP and JV Partners	Production of 26 GW of combined solar and wind power generating capacity, 1.6 million tonnes of hydrogen or 9 million tonnes of green ammonia per year. North of Port Hedland	Not known
5	Roy Hill Stanley Point Berth 3	Hanroy Prospecting	New berth able to support Cape sized vessels, 40 Mtpa capacity ship loader and new overland conveyor, new rail loop, additional car dumper and capacity increase to the Roy Hill stockyard.	Not known

#	Development Name	Development Proponent	Nature of Development	Timing
6	Hedland Junction Stage 4 Subdivision	Town of Port Hedland	Development of approximately 220 hectares in the Wedgefield Industrial Estate Structure Plan (WIESP) to between 80-100 industrial lots of a range of sizes to provide for a range of general industrial uses with a focus on transport development and the incorporation of water sensitive design at a lot and public realm level.	Not known
7	Pilbara Energy	Fortescue Metals Group	644 MW solar farm.	Not known

The source of the above information was the Town's Housing Presentation to key stakeholders in May 2024 and additional research.

8. Kariyarra People

The Kariyarra people are the Traditional Owners (TOs) of the Port Hedland area and within the land and sea and within the boundary of their Native Title Determination Area (NTDA) they are the common law native title holders.

Figure 8-1 below shows the Kariyarra NTDA.

Figure 8-1: Kariyarra NTDA

The Kariyarra Aboriginal Corporation RNTBC (KAC) is the representative organisation for the Kariyarra common law native title holders and so is a key stakeholder for Grounded and the SHRA Development.

Prior engagement and consultation by Circle in Port Hedland since 2021 with many stakeholders identified the need for the acknowledgement of the Kariyarra people's status as TOs of the land on which Hedland is situated, as a matter of first principle.

It is said that adopting approaches that acknowledges and respects Kariyarra people's status as TOs of the land on which Port and South Hedland is situated will contribute to reconciliation between Aboriginal and non-Aboriginal Australians and help in local social, cultural and economic development and in closing the gap between Indigenous and non-Indigenous Australians.

From a social development perspective, in past consultations with Kariyarra people, the major issues that they have raised relating to their social, cultural and economic development included:

- housing – most importantly as a major barrier to health and wellbeing,
- social facilities for children and youth, including childcare – a big barrier to economic participation, and
- support for the arts – a desirable and achievable aim with proven success and which can have intergenerational benefits.

Consultations with Kariyarra people regarding the social impact of the SHRA Development have commenced and should continue.

Further information about the involvement of Kariyarra people in the SHRA Development is contained in **14 Kariyarra Community Involvement.**

8.1. Other ATSI People in South Hedland

Within the South Hedland SA2 there are 2454 people who identify as Aboriginal (2,190) or Torres Strait Islander (113), or both (153).

The main Aboriginal languages spoken at home include:

- Nyangumarta (40)
- Yumplatok (Torres Strait Creole) (33)
- Martu Wangka (24)
- Kariyarra (16)

There are a further 250 ATSI people who reported that they spoke an Australian Indigenous language at home and a further 1,945 ATSI people who stated that they use only English at home.

Other Aboriginal groups whose traditional country is adjacent to Kariyarra and who live in South Hedland and surrounds include the Ngarla, Nyamal, Karajarri, Nyangumarta, Ngarluma, Yindjibarndi and Palyku.

Further information regarding the Aboriginal and Torres Straits Islander people in South Hedland is provided throughout the following Social Baseline section.

9. Social Baseline

This section provides a simple social baseline which informed the preparation of this SIA Report. The data and information presented is largely from the ABS Census 2021 with additional information obtained from primary sources where available and identified during consultations. The information presented includes some high-level reflections of evident trends.

9.1. Population and Demographics

At the 2021 Census the resident population of the Port Hedland LGA was 15,684, reflecting an increase of 1,200 people or 8% since the previous Census in 2016.

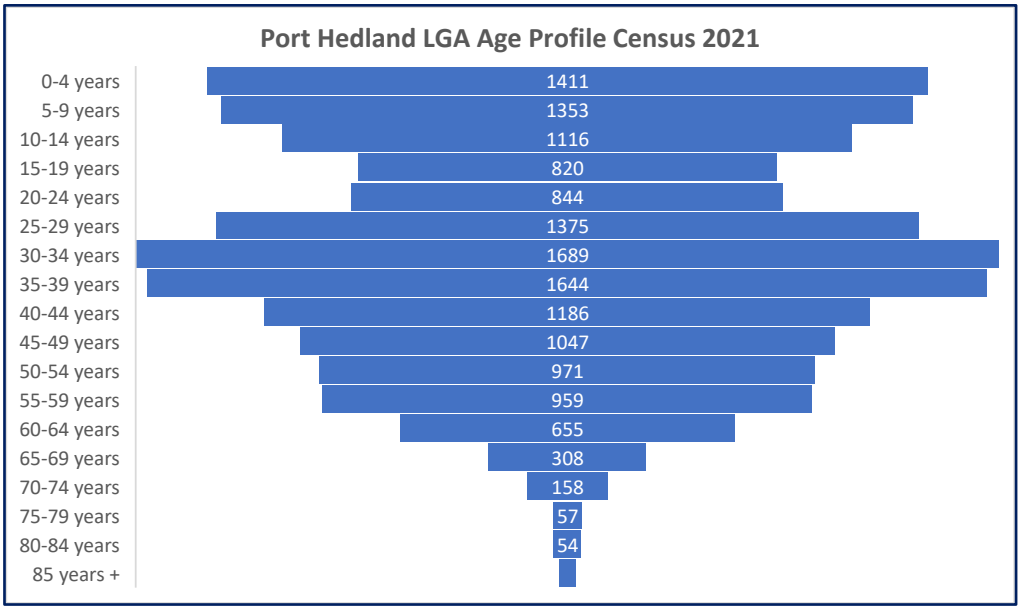

Figure 9-1: Port Hedland Age Profile: Census 2021

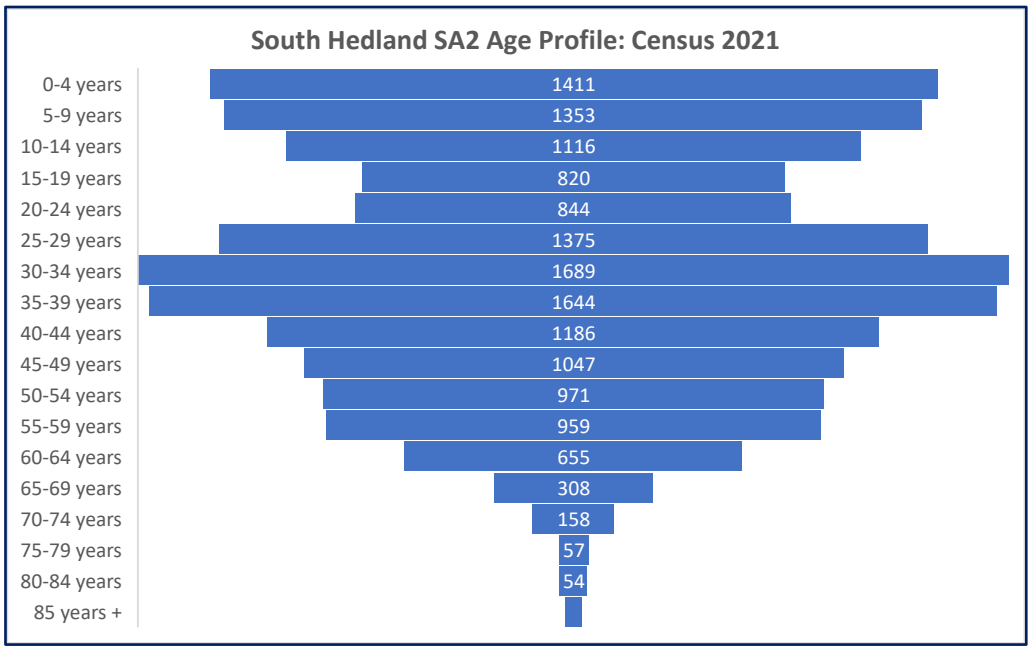

Figure 9-2: South Hedland SA2: 2021 Census

At 11,046, the South Hedland resident population represents 70% of the LGA total, has seen an increase of 5% since 2016. The median age is 32 and the population is 52.5% male and 47.5% female. By contrast the median age of the ATSI population is 25 and the population is 48.5% male and 51.5% female.

The overall population in the Port Hedland LGA saw a net 17% increase over the 20-year period between 2001 and 2021, from 13,020 persons to 15,684.

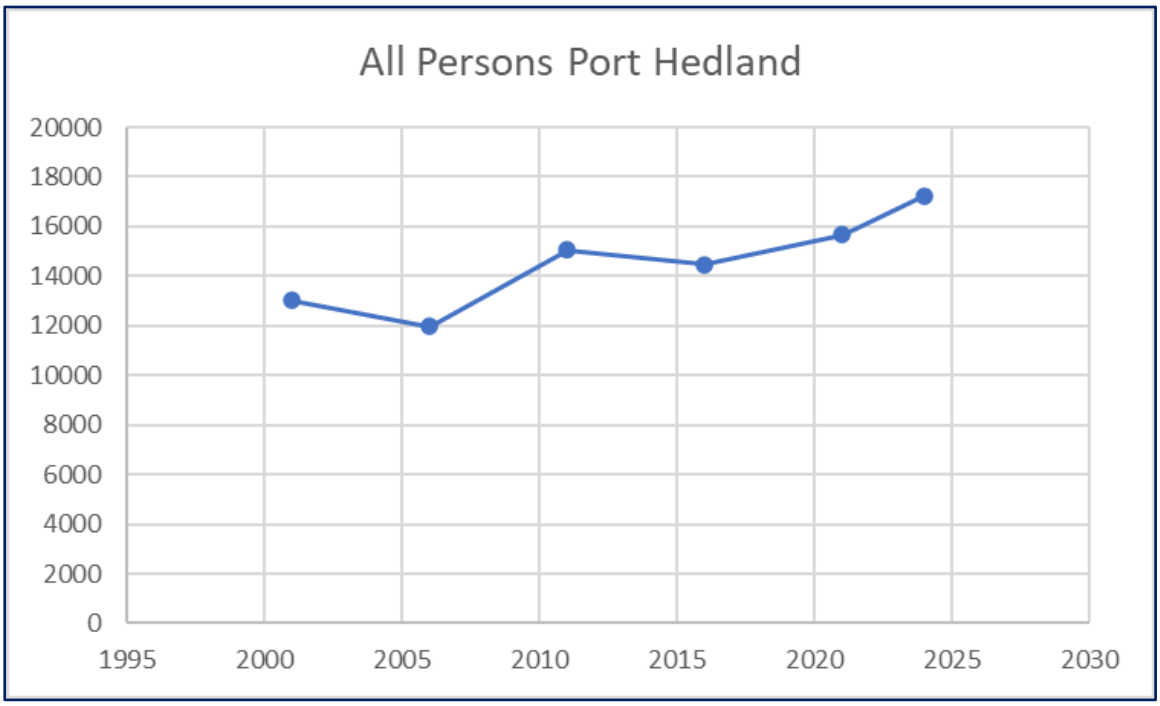

Figure 9-3: Port Hedland Population Growth 2001 – 2024

According to the Town of Port Hedland, the population in May 2024 was 17,250 persons, an increase of 9% over the previous 3 years.

9.2. ATSI and Cultural Diversity

Within the South Hedland population, 2916 people (22.2%) reported as being of Aboriginal and / or Torres Strait Islander (ATSI) descent, and a further 2,207 (14.4%) were categorised as "Indigenous status not stated"[24].

In contrast, the ATSI population of WA is recorded as 3.3% and nationally as 3.2%.

Figure 9-4 below shows the top five ancestral backgrounds of the people in South Hedland[25].

[24] Note that there is likely some ATSI people who have been categorised as "Indigenous not stated", where they have marked both 'No' and 'Yes' boxes.

[25] Note that the questions relating to ancestry are optional and respondents can list up to two ancestries. This means that the total numbers will not correspond with the population numbers.

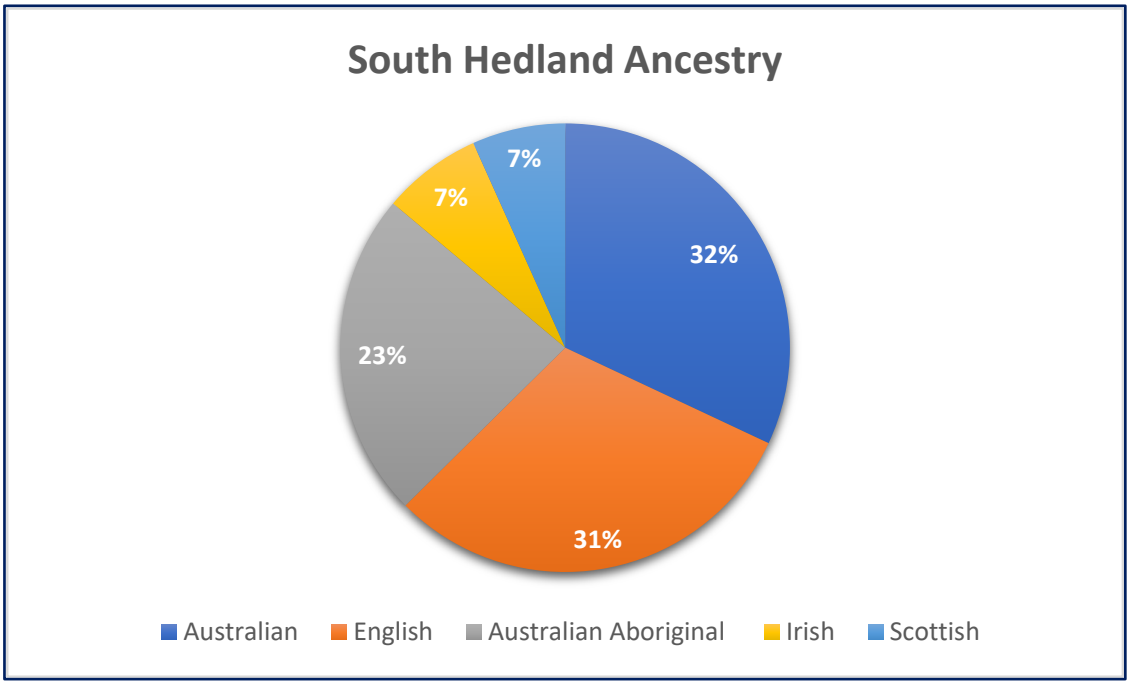

Figure 9-4: South Hedland Ancestry

In WA, 29.7% reported their ancestry as Australian while 55.1% reported their ancestry as either English, Irish or Scottish.

While the data is suggestive of a population that is largely Australian (with a strong British Isles ancestry) and Australian Aboriginal, there are numerous other languages spoke at home such as Malay, Tagalog, Filipino, Gujarati and Indonesian.

Figure 9-5 below shows the top six reported countries of birth of South Hedland people.

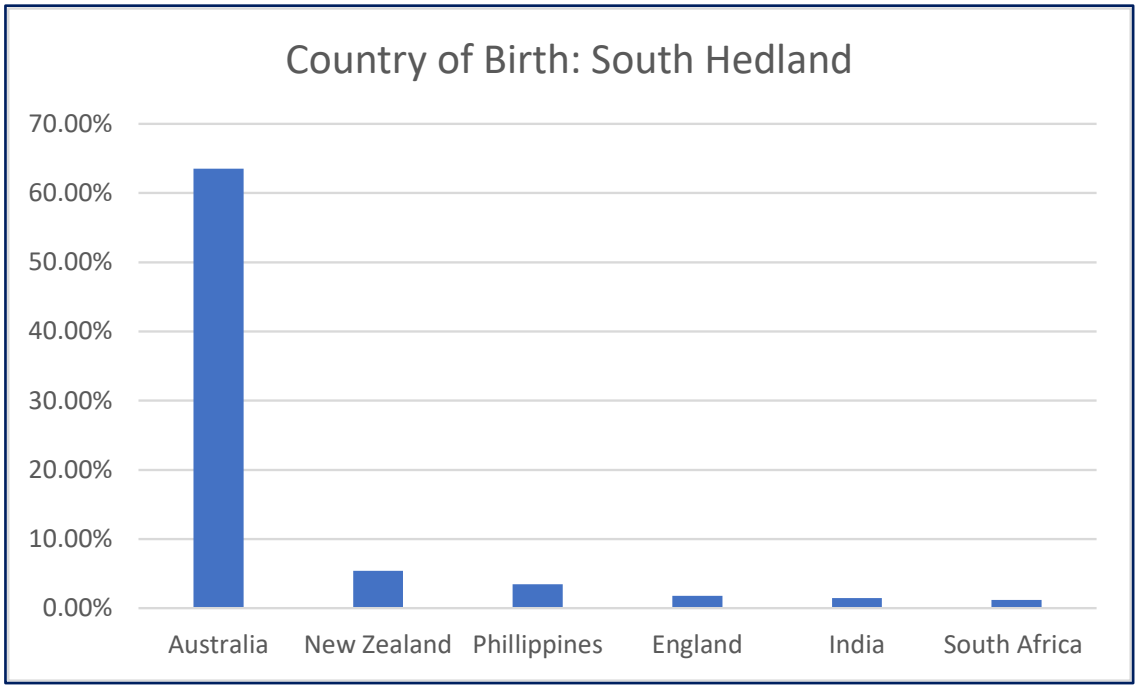

Figure 9-5: Country of Birth

9.3. Educational Attainment

At the 2021 Cenuse, there were 8,263 people normally resident in South Hedland over the age of 15. Figures 9-6 and 9-7 below show the educational attainment as informed in 2016.

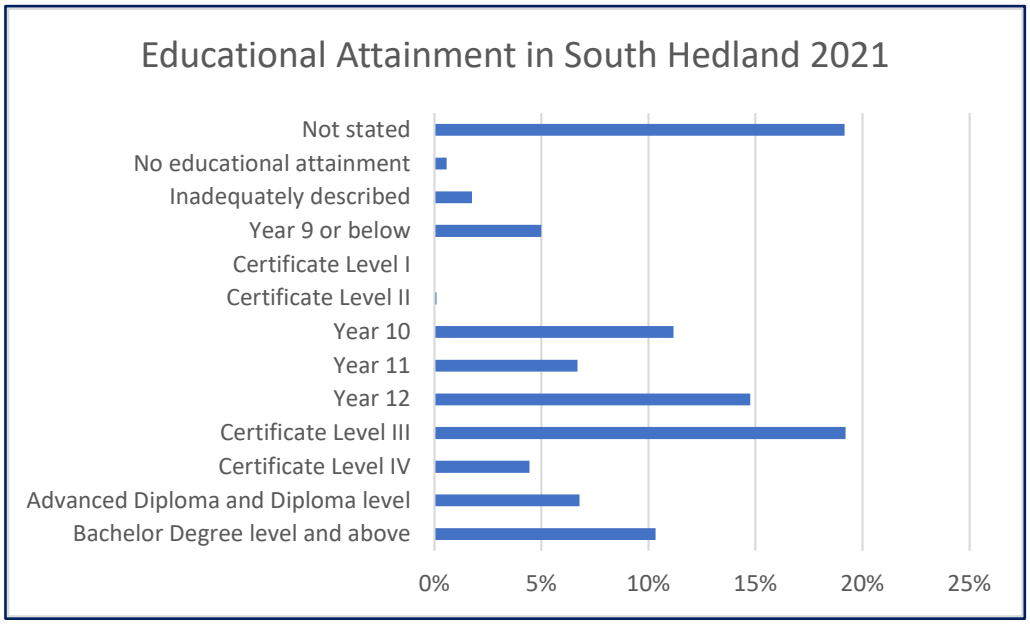

Figure 9-6: Educational Attainment in South Hedland 2021

- 41% have achieved a Bachelor Degree or above, an Advanced Diploma or Diploma, or a Trade Certificate level of educational and vocational training achievement.
- 15% have completed Year 12 and 18% Year 11 and Year 10 combined.
- 27% of residents (or 2200 people) either did not state their level of educational attainment or have a Year 9 or below level of education.

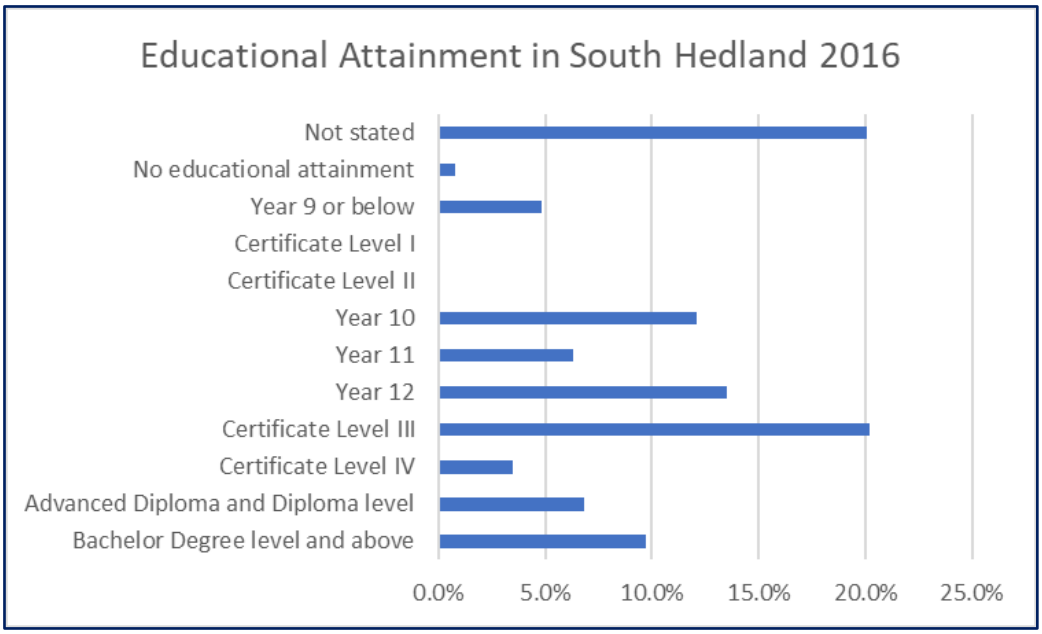

Figure 9-7: Educational Attainment in South Hedland 2016

There has been no material change in educational attainment since 2016. The data does suggest a reasonable level of education and vocational training achievement at the skilled and semi-skilled levels that that would be suitable for the SHRA construction and operations workforce.

9.4. Employment and the Labour Force

Figure 9-8 below shows that of working age people in South Hedland there is a Labour Force Participation Rate of 67%, or 5,518 people. The remaining 33%, or 2,752 people are either not in the labour force (16%) or not stated (17%).

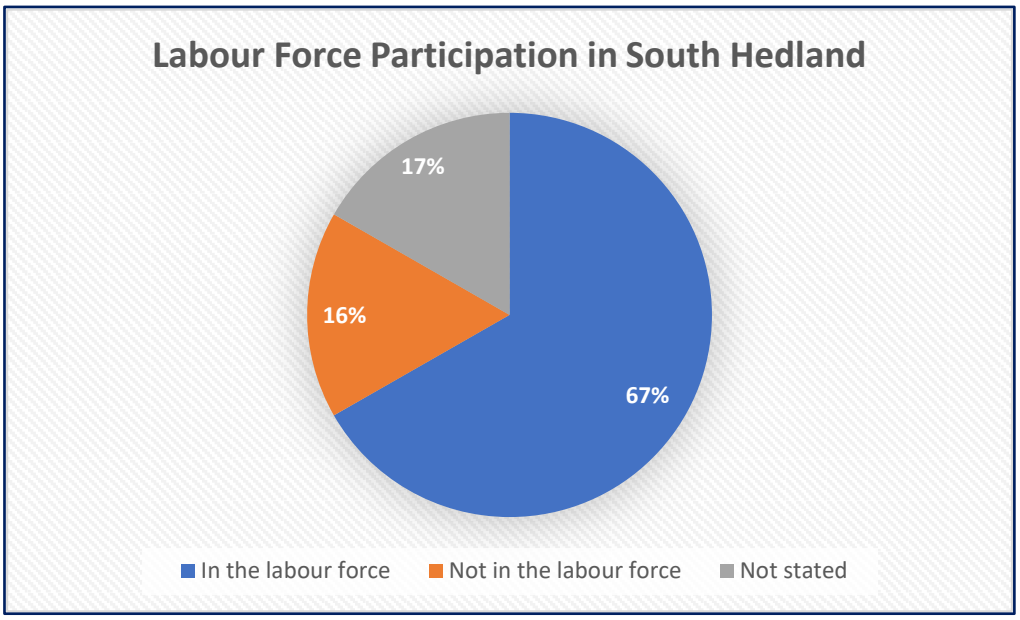

Figure 9-8: Labour Force Participation in South Hedland

Figure 9-9 below shows that of those in the workforce, nearly 70% are in full time roles, 27% in part time roles or away from work and 4.1% are unemployed (3.5% in the Port Hedland LGA).

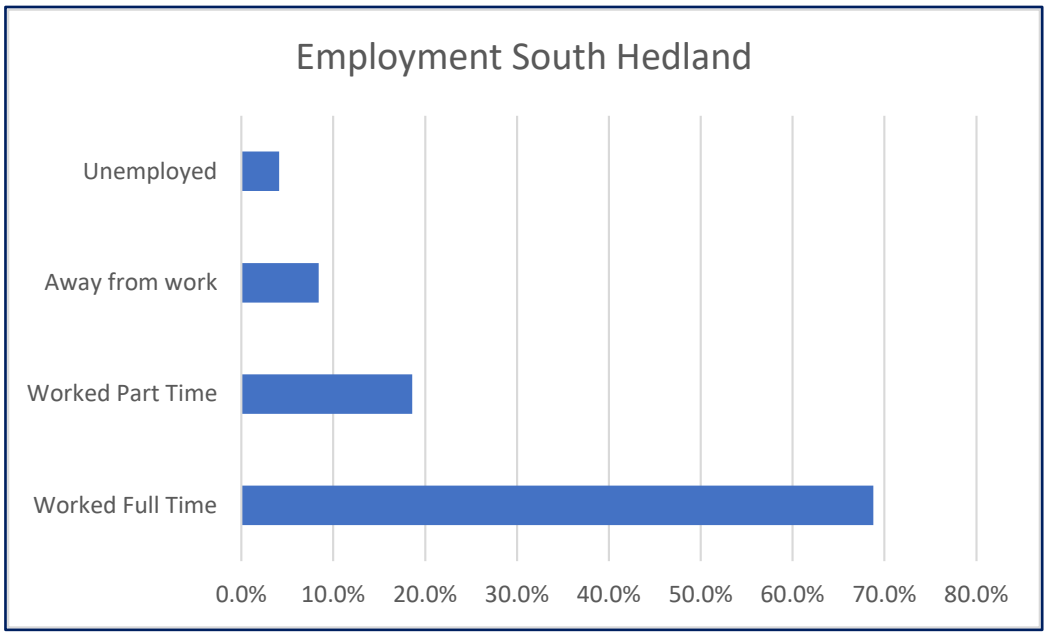

Figure 9-9: Employment in South Hedland

9.5. Aboriginal Employment and Labour Force Participation

In contrast to the data above, Figure 9-10 shows that within the ATSI population the Labour Force Participation rate is 55% with 45% either not in the labour force or not stated.

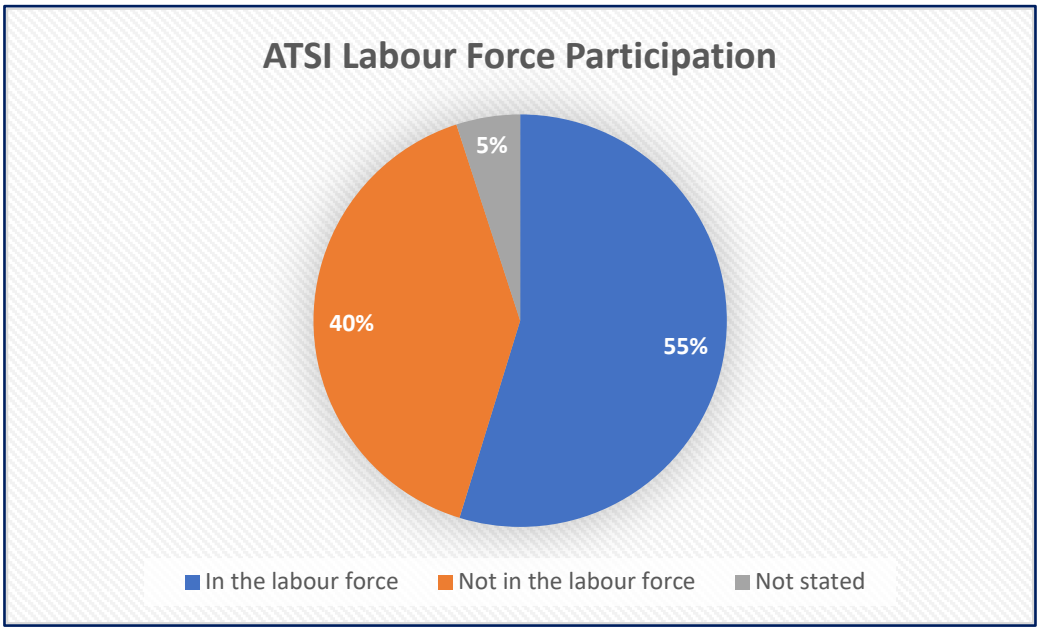

Figure 9-10: ATSI Labour Force Participation

Figure 9-11 below shows that of those in the workforce, about 55% are in full time jobs, 31% in part time jobs or away from work and 13% are unemployed[26].

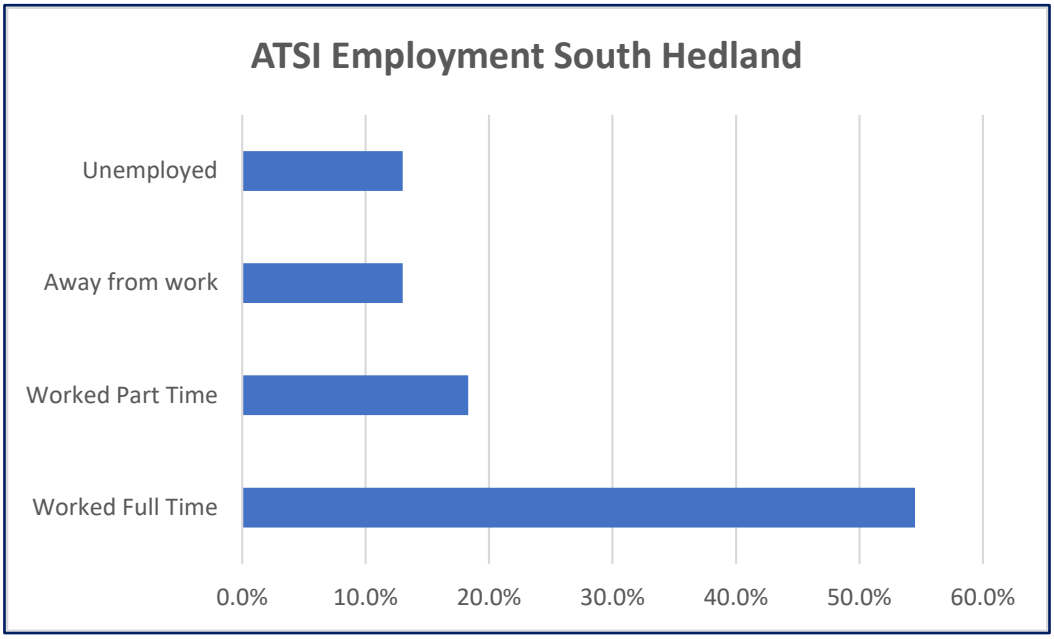

Figure 9-11: ATSI Employment in South Hedland

[26] It is important to note that ATSI unemployment figures are often masked by people's participation in the Community Development Program (CDP) and so the unemployment rate can often be much higher https://www.niaa.gov.au/our-work/employment-and-economic-development/community-development-program-cdp.

9.6. Occupation and Industry

Figure 9-12 below shows the occupational profile for South Hedland.

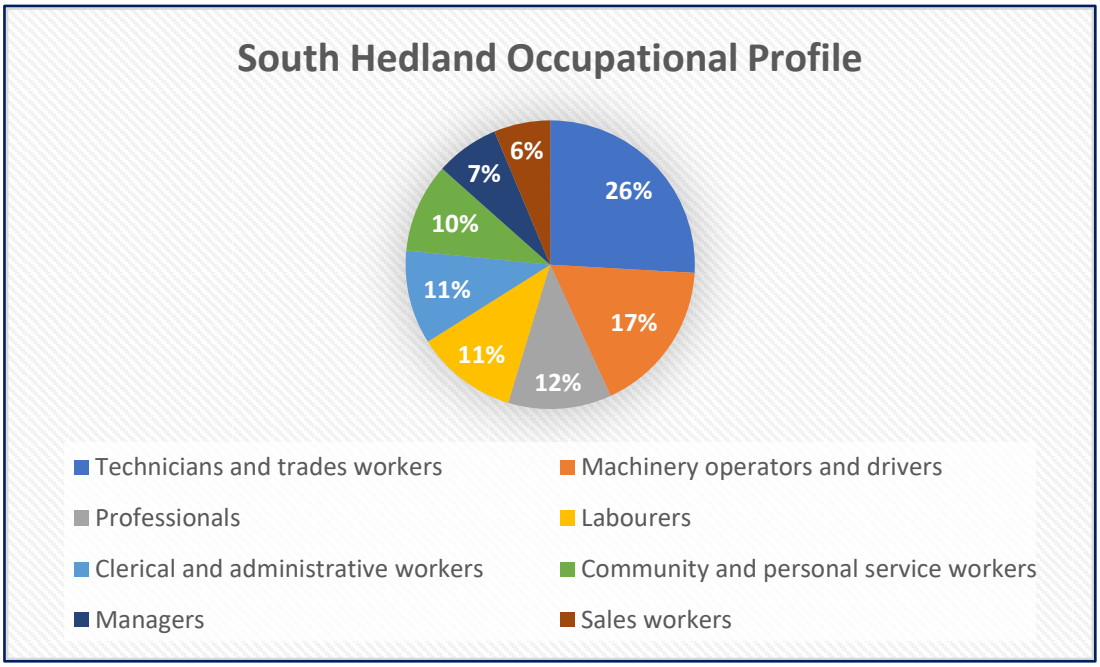

Figure 9-12: South Hedland Occupational Profile

Some 54% of the workforce are technicians or trade workers, machinery operators and drivers, or labourers. In addition, a further 21% work in clerical or administrative roles or in community and personal service worker roles. The data suggests a skilled and semi-skilled workforce that would be suitable for the SHRA construction and operations workforce.

Figure 9-13 below shows the top industry sectors in which people are employed.

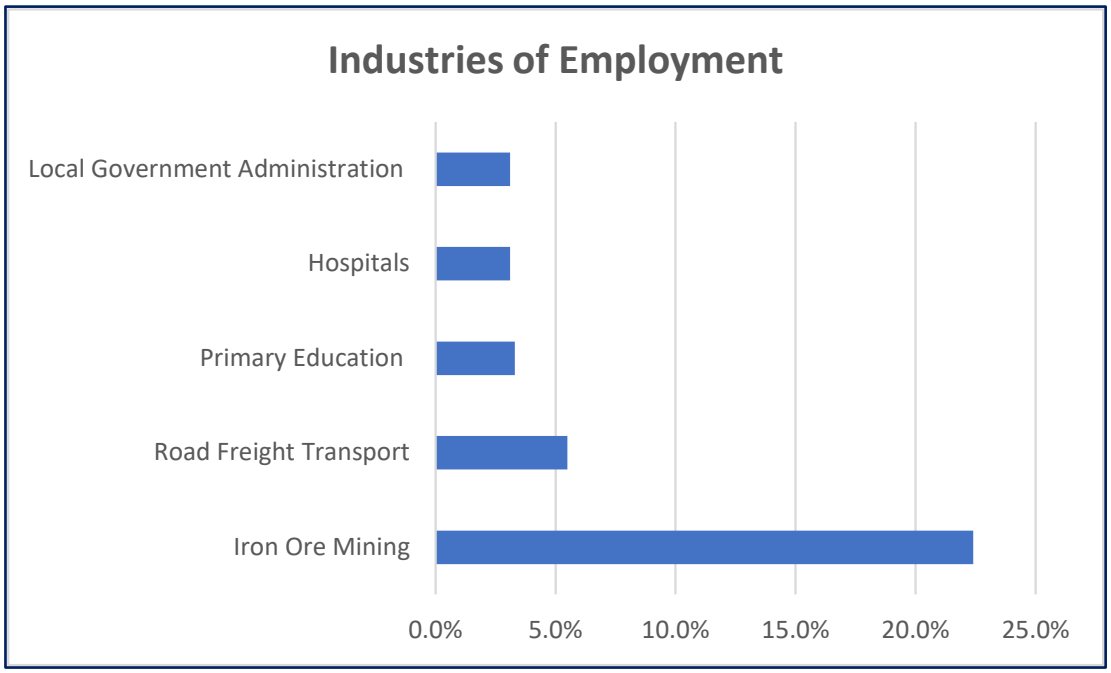

Figure 9-13: Industries of Employment

Unsurprisingly for South Hedland a large proportion of employment is within or associated with iron ore mining. The remaining industry sectors with significant numbers are in local government administration, primary education and the health sector.

9.7. Incomes

Figure 9-14 shows the median weekly incomes for individuals, families and households as $1415, $3024, and $2586 respectively. The median personal income for individuals is approximately double that of the State median and family income 1.5 times that of the State median.

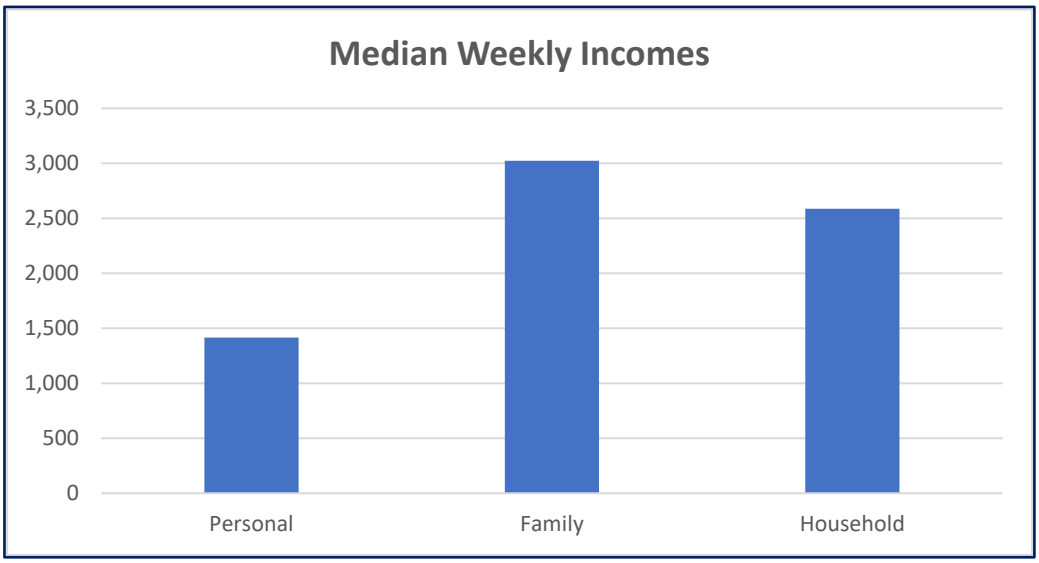

Figure 9-14: Median Weekly Incomes

In comparison, the median weekly incomes for ATSI individuals, families and households are $631, $2095, and $2021 respectively.

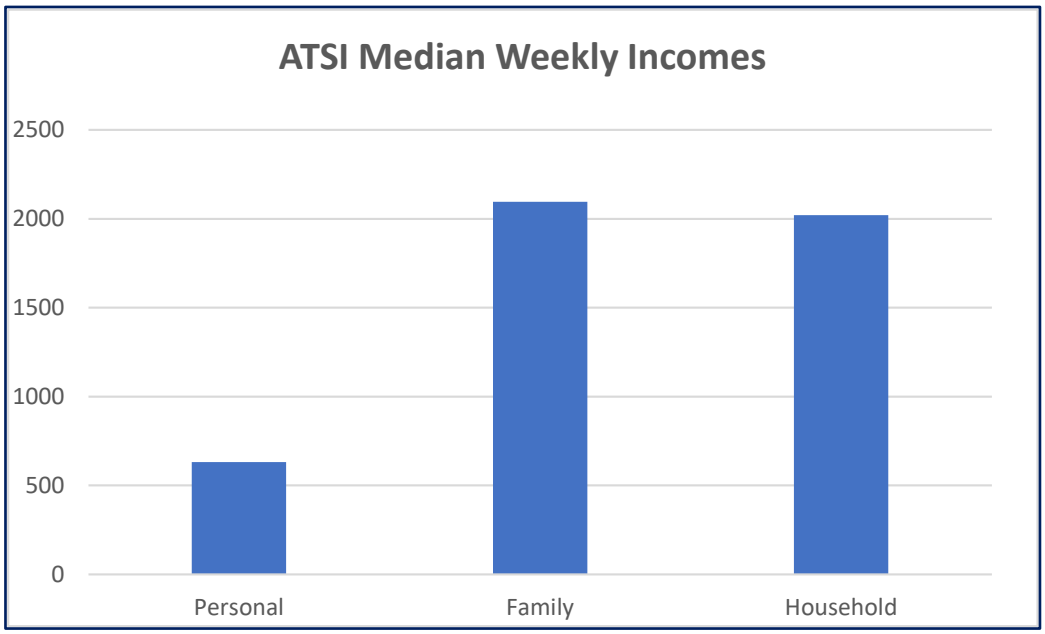

Figure 9-15: ATSI Median Weekly Incomes

The median personal income for ATSI people in South Hedland is 45% of the broader South Hedland population and 87% of the State median. ATSI families in South Hedland have a median income of

$2095, or roughly 2/3 of the broader population and slightly above that of the State median of $1910.

9.8. Housing and Accommodation

The dwelling profile in the Town of Port Hedland LGA by ownership and rental type is shown in Figure 9-16 below.

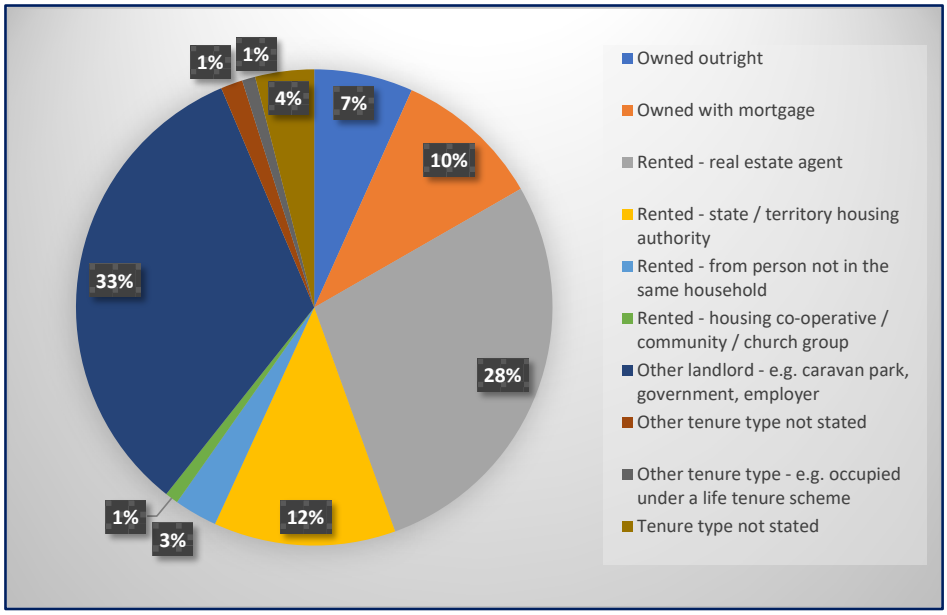

Figure 9-16: Dwelling profile in Port Hedland LGA

Of the total of all types, i.e., detached houses, semi-detached townhouses, flats, apartments and other dwellings, 61% are rented through a real estate agent or 'other landlord' type.

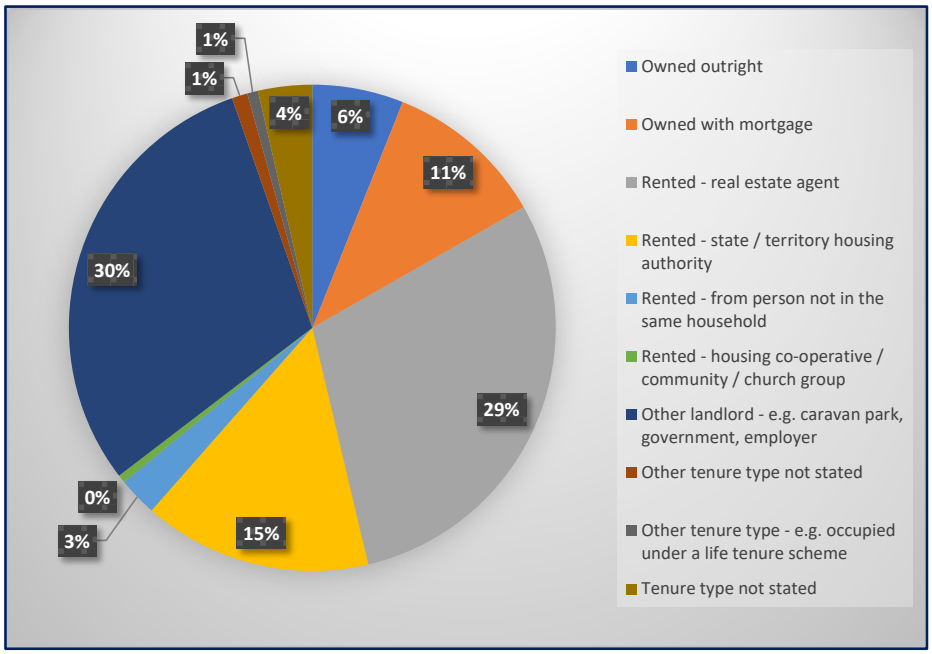

Figure 9-17: Dwelling profile in South Hedland

To summarise, the bulk of dwellings in Port Hedland and South Hedland are held by private companies/businesses/owners (30%), held by occupiers under a life tenure scheme underwritten by companies/businesses (29%) or held and rented by the state / territory housing authority (15%)

Other landlord types include 'residential parks (includes caravan parks and marinas)', or private employers, including government through the program for Government Regional Officers Housing (GROH). The proportion of properties owned outright or owned with mortgage is 17%, while public housing authority rentals is 12%. The South Hedland SA2 area has largely the same profile.

9.9. Housing Market

9.9.1. Properties for Rent

In the 2016 Census, it was found that of all private dwellings, 66.4% were occupied and 33.6% were unoccupied. In contrast, in the 2021 Census, it was found that of the 4,329 private dwellings identified, 78% were occupied and 22% (952) unoccupied. It is also understood that many of those unoccupied dwellings are owned by companies are unoccupied but not available for private rental.

In March 2025, an internet search[27] on www.realestate.com.au for rental properties in Port and South Hedland revealed 89 private properties for rent across all property types:

- Houses – 55
- Town houses, apartments, units and villas – 34

Weekly rental prices for houses ranged from $800 – $2100, and for town houses, apartments, units and villas from $500 – $950.

The search function on the Real Estate website allows for a search for Affordable properties – that are offered under rental affordability schemes returned no results.

9.9.2. Properties For Sale

An internet search in March 2025 found that there were 178 properties for sale in South Hedland[28] across all property types:

- Houses – 102
- Town houses, apartments, units and villas – 45
- Vacant land – 31

Houses for sale, across all types, ranged from $315,000 for a 3-bedroom, 2-bathroom home to $826,000 for a 4-bedroom, 2-bathroom home. Town houses, apartments, units and villas for sale ranged from $190,000 for a 3-bedroom, 1-bathroom to $665,000 for a 4-bedroom, 2-bathroom town house.

An assessment of a sample of 12 vacant residential lots, varying size from between 470m2 to 665m2 – an average lot size of 534m2 – revealed an average price per m2 of $277. So, in the present market a buyer can expect to pay $138,689 for a 500m house block. Assuming a build cost of $4000 – $5000 per m^2, and a standard 260m^2 house, a home builder could expect to pay between $1,178,689 and

[27] https://www.realestate.com.au/rent/in-south+hedland,+wa+6722/list-1?activeSort=relevance&source=refinement

[28] https://www.realestate.com.au/buy/in-south+hedland,+wa+6722/list-1?source=refinement

$1,438,689 for a cyclone rated build. On top of this are the costs of finance, insurance, stamp duty and so on, which would quite likely put building a home in South Hedland without the reach of many.

It is also likely that even if such a home were built, the resultant cost would far exceed the build value of the home and so would be unlikely to satisfy the requirements of any lender.

The Pilbara Residential Housing and Land Summaries[29] produced regularly by the Pilbara Development Commission (PDC) examines the following key metrics:

- Residential Properties Advertised for Rent
- Residential Properties Advertised for Sale
- Advertised Residential Land for Sale
- Vacant Residential Land Settlements
- Development Proposals

An examination of these over time provides a good and long-term picture of the residential housing market in South Hedland; however, a detailed analysis of this is beyond the scope of this SIA.

9.9.3. Housing Summary and Local Housing Strategy

In 2021 the Town facilitated a Housing Solutions Summit and from this was formed a Hedland Housing Steering Committee to seek to address the long-term growth of the Town.

The priorities that arose also included:

- Undertaking an audit of and to repurpose vacant and underutilised properties.
- Promote multi-party development to reduce risk to Government and developers.
- Explore models of affordable and sustainable housing that can be 'expedited'.
- Promote and support pathways to home ownership.

The Steering Committee comprised the following government and statutory authority parties:

- Department of Communities
- Department of Health
- Development WA
- Town of Port Hedland
- Pilbara Development Commission

A vacant housing audit was undertaken that identified that nearly 20% of the dwellings in Port Hedland were unoccupied (from 2021 Census data) and so the Town wrote to the twelve of the largest residential housing owners to identify if there were unused properties that could be reallocated for affordable housing. None of the largest residential housing owners indicated they had vacant properties that they were prepared to reallocate for affordable housing.

[29] https://www.pdc.wa.gov.au/publications/snapshots.aspx

In 2022, the Town undertook a Vacant Lot Analysis in Port and South Hedland to determine housing supply for residential development which identified a lack of available land parcels and so the need for subdivision areas to be made available in the short term.

Consequently, the Town continues to seek the release of more residential land from Development WA through:

- the Stables Structure Plan in Port Hedland, and
- the Western Edge Structure Plan in South Hedland.

Figure 9-18: South Hedland Western Edge Structure Plan

In addition, the Town has sought two amendments to the Town Planning Scheme within South Hedland to allow for greater housing development.

In 2023 the Town commenced the development of a Local Housing Strategy[30] in collaboration with the PDC. Then in May 2024, the Town provided an update to key stakeholders, the main points of which are as follows:

[30] Local Housing Strategy.

- The Town has committed $800 million to a capital works program over 15 years with major projects including:
    - Key Worker Housing
    - South Hedland Integrated Sports Hub (SHISH)
    - Performing Arts Centre
    - Civic and Community Precinct
    - JD Hardie Future Stages
- Port Hedland has 2,370 existing dwellings and South Hedland 5,240 – a total of approximately 7,610 existing dwellings.
- The Town's population of 17,250 persons (ERP 2023) is expected to grow by a minimum of 4,500 people by 2041.
- To meet this demand an additional 2,050 dwellings would be required.
- This expected growth of 265 person per year would require 120 dwellings to be constructed every year.

Despite this apparent demand for housing of the 244 building permits issued during 2023, only 13 (5.3%) were for residential building.

As of 2024, the key strategies of the Town are:

- To encouraging proponents of TWAs to include service worker housing and community rooms as part of their Social Impact Assessment and Management Plans.
- Undertake major capital works projects to increase liveability of Hedland.
- Working with Development WA to ensure adequate land supply through subdivision.

Additionally, the Town has engaged with Keystart and the Northwest Aboriginal Housing Fund to understand these initiatives further.

9.10. Transient Workforce and Short-Term Accommodation

In this section the landscape of TWA and STA is examined with the aim of siting the SHRA Development proposal within that context.

It is noted that the Town does not have a STA policy but instead has a "Lodging Houses and Public Accommodation[31]" policy which defines a lodging house as *"…any permanent or temporary building or structure that is provided for lodging or boarding more than 6 persons, including motels, hotels and mining accommodation camps.*" It is not clear whether this policy covers all STA such as those properties offered through online booking platforms such AirBNB, Boooking.com and others.

For the purposes of this SIA these are include in the definition of STA.

There are overlaps between TWA and STA between the resources sector and non-resources sector, and the tourism sector and which can all have an impact on the availability of housing[32]. There has

[31] Town Lodging House Policy.

[32] https://www.sydney.edu.au/news-opinion/news/2023/03/08/easing-the-housing-crisis.html

been much discussion about this across Australia and many local governments have developed and implemented local STA policies and bylaws. The WA Government has recently required all STA providers in the State to better understand and manage the sector[33].

For these reasons and given that Grounded's market intentions include both resource and non-resource sector offering, an attempt has been made to account for all known authorised TWA and STA beds in the Port Hedland LGA. These are shown in Table 8-1 below.

Table 9-1: Port Hedland LGA STA and TWA Beds[34]

Facility	No. of Operational Beds
South Hedland	
Blackrock Caravan Park	199
Club Hamilton (FMG)	1008
Gateway Development (Roy Hill)	1239
The Lodge Motel	250
Total	**2696**
Port Hedland	
Discovery Park	125
Cambells Transport (ex-Immigration Detention Centre)	100
Esplanade Hotel*	108
Hedland Hotel	65
Hospitality Inn	41
Mia Mia Executive Apartments	Unknown
Summer Port Lodge	180
Total	**619**
Airport Precinct	
ESS Waypoint**	255

[33] WA Short Term Rental Accommodation Policy.

[34] Source: Town of Port Hedland, PDC and others.

Facility	No. of Operational Beds
Landing Resort	600
MGM Lodge***	220
Port Haven (majority occupier BHP)	1200
Walkabout Hotel	94
Total	**2371**
Site Based or Out of Town	
Camp QUBE (Pippingarra)	104
FMG Rail Camp 145	103
Kangan Development (temp)	220
Mt Dove	200
Turner River Lodge	18
Wodgina	700
Total	**1345**
Grand Total	**7,301**

* The Esplanade Hotel in the centre of Port Hedland town has 108 rooms that are not in use and, it is understood, are not likely to be at any time soon.

** It is understood that ESS Waypoint Development plans an expansion of 300 rooms to cater for BHP's Port Debottlenecking Project.

*** MGM Lodge is presently under construction[35].

Of the total 7,301 beds in the Port Hedland LGA, 1,345 are not proximate to Port or South Hedland. Of the remaining 5,686, 2,371 are in the Port Hedland Airport Vicinity and are a mix of TWA and STA, the large majority of which are TWA beds taken up by resource sector workers, and during the dry season are subject to the demand of the annual tourist flow.

The bulk of these TWA and STA (89%) are in the airport vicinity (42%) or South Hedland (47%).

In Port Hedland there are some approximately 619 beds, and it is understood that while only approximately 100 of these are purely TWA, the remaining 519 are STA, but do regularly cater for

[35] https://www.mgmbulknewsletter.com.au/branchsummaries

FIFO and DIDO workers. Of the 2,696 in South Hedland, 2,247 are majority occupied by either FMG or Roy Hill. It is noted that BHP, FMG and Roy Hill do provide discounted or gratis room availability to the NFP sector from time to time.

Excluding site-based or out of town TWA and STA beds, Grounded's SHRA Development proposal for approximately 300 beds would represent an approximate 5.3% increase in the current Port Hedland, South Hedland and Airport Precinct based TWA and STA stock.

Of the overall total, the SHRA Development proposal would result in an increase of 4.1%.

9.10.1. Hotels, Motels and Caravan Parks

Some caravan parks cater for resource and non-resource / non-tourist accommodation provision.

At the time of writing the short stay accommodation availability in Hedland was reasonably constrained. A live web search test for February 2025 found several properties available for a six-night short stay accommodation rental. Most were in the vicinity of $400+ per night.

9.10.2. Major Shutdown Demand

Port Hedland is regularly subjected by the inundation of hundreds of transient workers contracted to undertake intensive shutdown works across the iron ore operations run by BHP, FMG and Roy Hill. During these multi month shutdown campaigns, there is an accommodation bust, and smaller companies and business not directly associated with the major miners lose their accommodation during this time, particularly service workers and non-resource sector visitors to the area.

9.10.3. New or Proposed TWA and STA Developments

The Azzura Square[36] development plans involve four luxury residential towers and A ground floor shopping centre for South Hedland. Development Approval was granted in 2023 by the Town and the JDAP but to date construction has not commenced.

In November 2024, the RDAP declined to approve a Pacific Partners led tourism and TWA development in South Hedland of some 1500 rooms. It is understood that this was referred to the State Administrative Tribunal (SAT) and the matter is to be heard in May 2025. Media coverage at the time provided a good snapshot of the problems that Port Hedland faces when it comes to striking the right balance between TWA / STA and permanent residential housing[37].

9.10.4. Essential Service Workers Dedicated Accommodation

In South Hedland the Osprey Village Service Worker Accommodation[38], operated by that is operated by Fleetwood Australia in a Public Private Partnership with the Department of Communities[39].

Osprey Village was developed to support greater affordable housing opportunities for workers in South Hedland and presently residents are charged the lower of market rent or 25% of gross household income. Market rent reviews are conducted on a yearly basis while the Department monitors the stability of market rents in the town.

[36] https://azzurasquare.com.au/

[37] Forever a FIFO town.

[38] https://www.ospreyDevelopment.com.au/

[39] https://www.wa.gov.au/organisation/department-of-communities/osprey-Development-service-workers-accommodation

Osprey Village is intended to ensure that the lowest income service worker households are given rental assistance. It is understood that there is more than a year's waiting list for a home in Osprey Village [40].

Also in South Hedland, the Town is seeking to develop an Essential Workers Development, comprising 32 grouped dwellings, 26 multiple dwellings, 18 serviced apartments and commercial tenancies[41]. This, in response to the shortage of affordable housing, particularly for the education, health, retail, hospitality, childcare and community safety sectors.

Figure 9-19: Town of Port Hedland proposed Essential Workers Development

Finally, in 2023 a Development Application for an Essential Workers Development was submitted by the Rowe Group and approved by the JDAP. This development involves 32 Grouped Dwellings, 26 Multiple Dwellings, 18 Serviced Apartments and 1 Commercial Tenancy (Office and Cafe/Restaurant). This was approved by JDAP on 26/3/2023 but construction has not yet commenced.

As noted above. the Town views that there is a current deficit of some 1,705 service workers and this is expected to increase to 2,931 by 2031.

9.11. Transport Infrastructure

Transregional WA[42] operates the public transport network in Port and South Hedland as shown in Figure 8-20 below, including the use of Parker Street as a suburban arterial road.

[40] Pers. Comm., several local NFPs and local agencies.

[41] https://www.porthedland.wa.gov.au/documents/4110/south-hedland-service-worker-housing-project

[42] https://www.transregional.wa.gov.au/Timetables/Port-Hedland

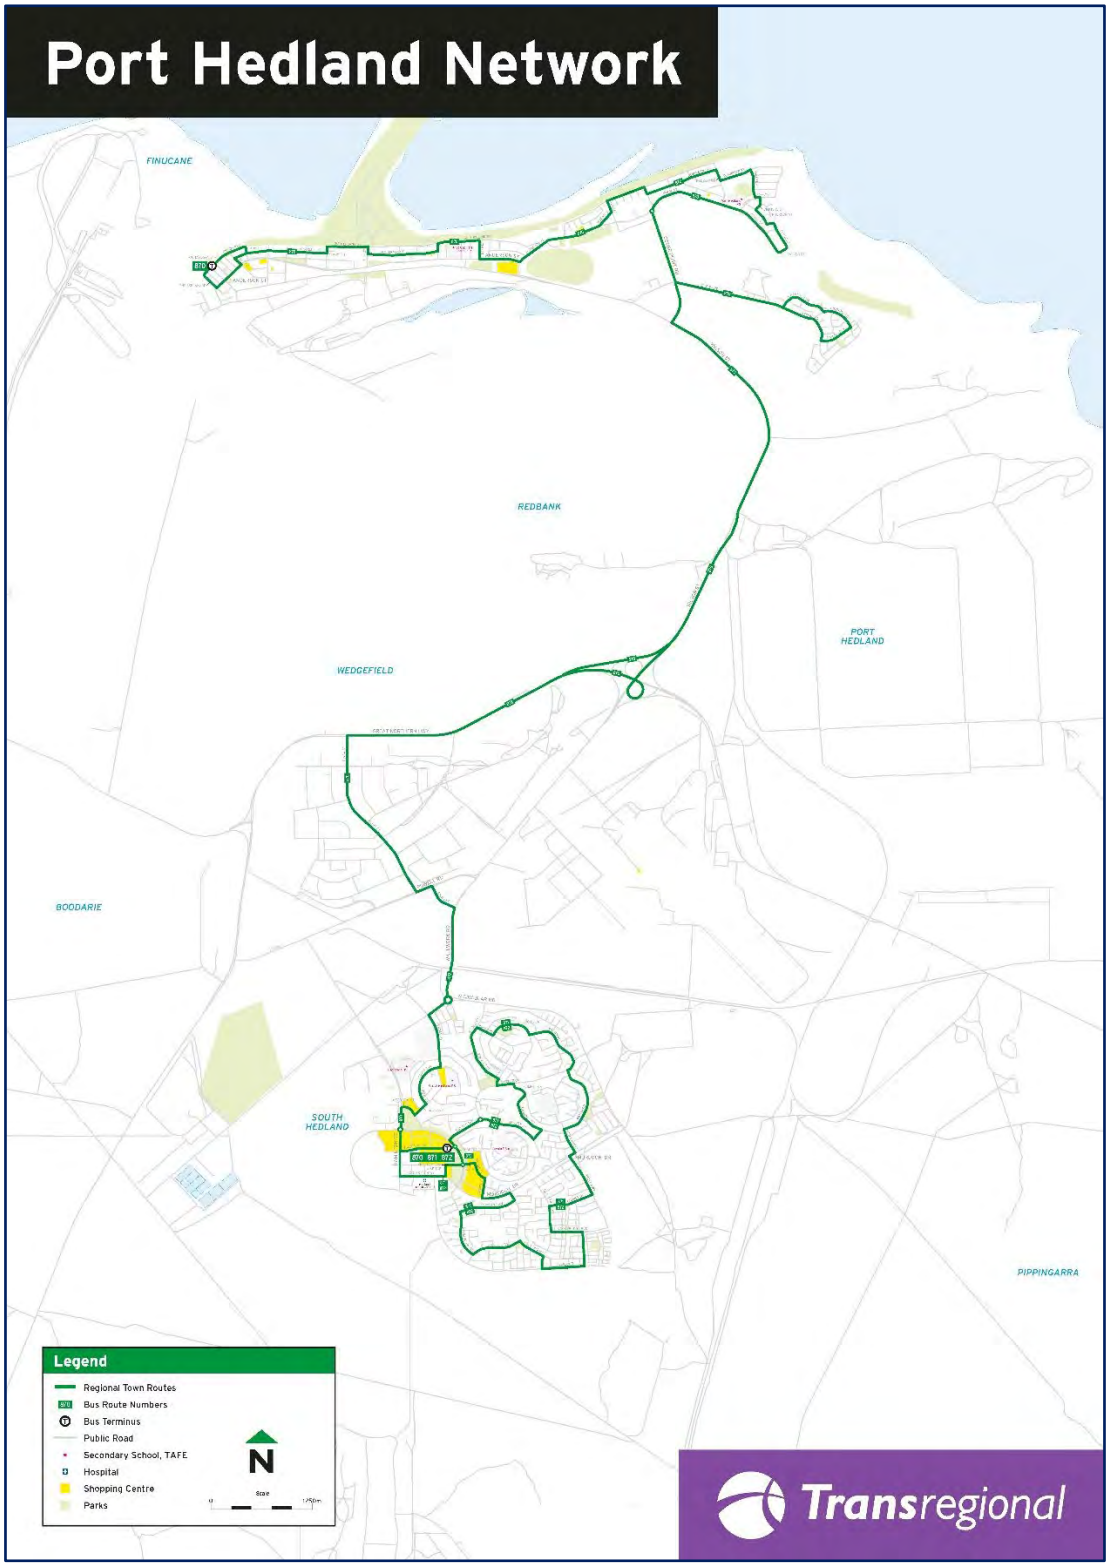

Figure 9-20: TransHedland Regional Bus Route

Figure 8-21 shows the school bus routes in South Hedland, including the use of Parker Street to access NR TAFE, the South Hedland Primary School and Hedland Senior High School and also part of Stanley Street.

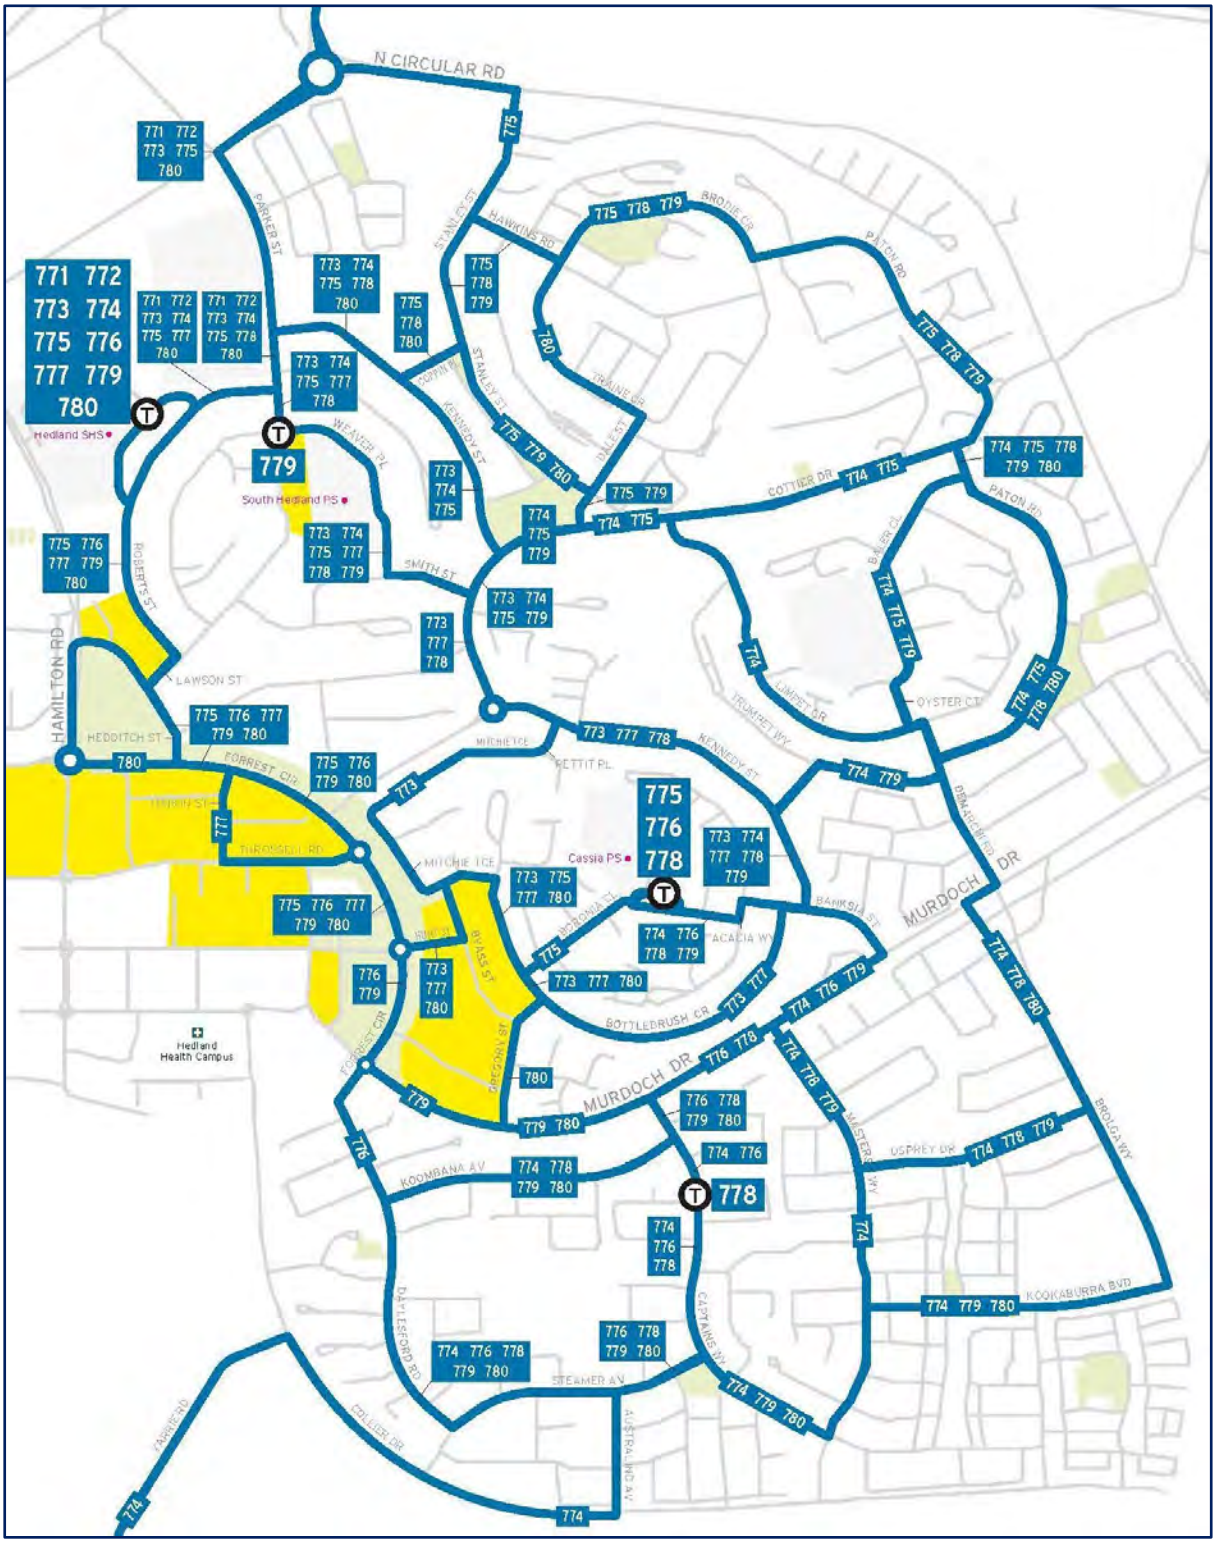

Figure 9-21: TransHedland South Hedland School Bus Routes

In all bus timetables for Monday to Friday that use Parker Street and the bus stop at NR TAFE, the first but departs the South Hedland Terminus at 8.43am and the last arrives at the Terminus at 4.33pm.

9.12. Health Infrastructure

The health services in Port and South Hedland comprise:

Hedland Health Campus

Operated by the WA Country Health Service (WACHS), the Hedland Health Campus[43] provides a 24/7 Emergency Department (ED), including a High Dependency Unit (HDU).

Hedland Health Campus also offers a wide variety of services including:

Table 9-2: Hedland Health Campus services

General Medical Services	

• Aged care services
• Allied health services
• Ambulatory care
• Mental health, drug and alcohol services
• Day surgery unit
• Inpatient unit
• Medical imaging
• Outpatient clinic including:
  o General medicine
  o General surgery
  o Gynaecology
	• Paediatrics Maternity and obstetric service
	• Paediatric unit
	• Pathology
	• Patient Assisted Travel Scheme (PATS)
	• Pharmacy
	• Population health services
	• Renal dialysis
	• Special care nursery
	• Telehealth

In addition, the Campus offers visiting specialist services in

Table 9-3: Visiting Specialist Medical Services

Visiting Specialist Medical Services	
• Adult cardiology • Ear, nose and throat • Dermatology • Ophthalmology • Orthopaedics • Paediatric cardiology	• Renal physician • Rheumatology • Vascular surgery • Neurology • Endocrinology • Urology

[43] Hedland Health Campus

Wirraka Maya

Wirraka Maya is an Aboriginal Community Controlled Health Service whose clientele are the Aboriginal people in the Port Hedland and South Hedland area and surrounding communities.

Marlu Health Services

Marlu Health Services[44] has a facility in South Hedland that provides full occupational health facilities including quality pre-employment medicals as well as health & wellness management and injury prevention programmes.

Port Hedland Medical Centre

The Port Hedland Medical Centre (PHMC)[45], based in Port Hedland, offers a Monday to Friday General Practitioners (GP) service including physiotherapists, nurses and technicians and provides medical services to individuals, families and local industry.

PHMC offers regular visiting specialists (including Occupational Physicians) and technicians from Perth to support the local community.

9.13. Sporting Groups and Community Service Organisations

There are some 31 different sports played in Port Hedland according to the Town's website[46], and that include Athletics, Basketball, Billiards and Snooker, BMX, Bowling, Combat Sports, Cricket, Dance, Darts, Diamond Sports, Equestrian, Fishing, Flying, Football (AFL), Golf, Gymnastics, Hockey, Little Athletics, Motor Sports, Netball, Roller Derby, Rugby, Shooting, Soccer, Swimming, Tennis, Touch, Tri Sports, Turf, Water Polo, and Yachting.

During the preparation of this SIA, it was found that not all are active.

In addition, there some 29 Community Service Organisations listed[47] including the following:

Table 9-4: Community Health Services

Community Service Organisations	
• Aboriginal Family Law Service • Aged Care Australia • Andrew McLaughlin Community Centre • Bloodwood Tree Association • Care for Hedland • Child Australia – West Pilbara Mobile Children Services • Empowering People in Communities • Entry Point Perth	• Ngala Parenting Support • Pilbara Community Legal Service • Pilbara Community Services • Pilbara Meta Maya Aboriginal Corporation • Port Hedland Library • Regional Development Australia • Relationships Australia • Rose Nowers Early Learning Centre • Saving Animals from Euthanasia

[44] https://marluhealth.com.au/

[45] https://www.porthedlandmedical.com.au/

[46] https://www.porthedland.wa.gov.au/our-community/sports-and-recreation/sporting-groups.aspx

[47] https://www.porthedland.wa.gov.au/listings/community/community-services

• Hedland Personnel • Hedland Snake Removal • Hedland Well Women's Centre • Hedland Women's Refuge • Helping Minds • IBN Corporation • Mission Australia	• South Hedland Child and Parent Centre • South Hedland Library • St Vincent de Paul • Wangka Maya Pilbara Aboriginal Language Centre • Wirraka Maya Health Service

Not all the above are relevant to the SHRA Development while some were identified as stakeholders for consultation in the preparation of this SIA Report.

9.14. Crime

Figures 9-22 and 9-23 overleaf show the Crime Statistics Report published by the WA Police Force (WAPOL) for Port Hedland and South Hedland relating to offences against the person and property offences on 30 December 2024.

It is evident that in over the past five years there has been a significant increase in offences against the person in South Hedland and very little change in Port Hedland. Property offences in both places have remained reasonably static.

The main property offences include burglary, motor vehicle theft, stealing, property damage and theft. The main offences against the person include recent sexual offences, assault (family domestic violence), assault (non-family), and associated threatening behaviour.

The difference between the two places in terms of the number of offences is stark.

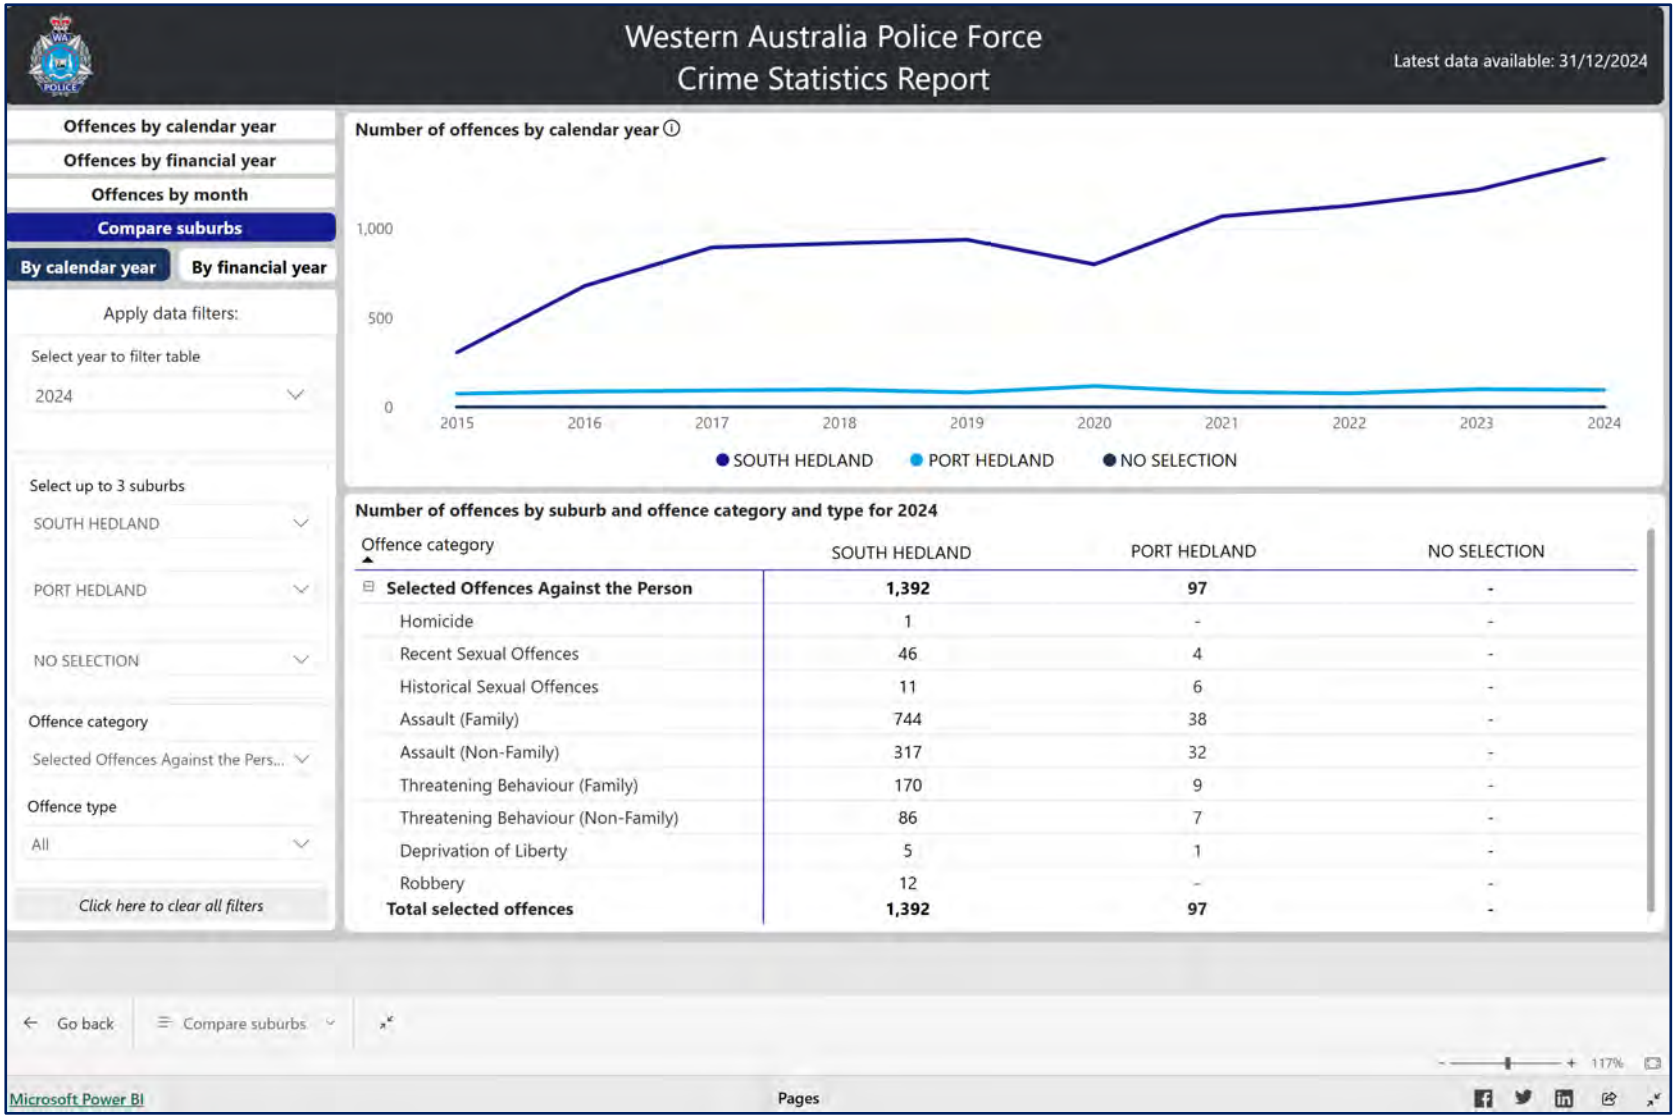

Figure 9-22: Port and South Hedland Crime Statistics - Offences Against the Person

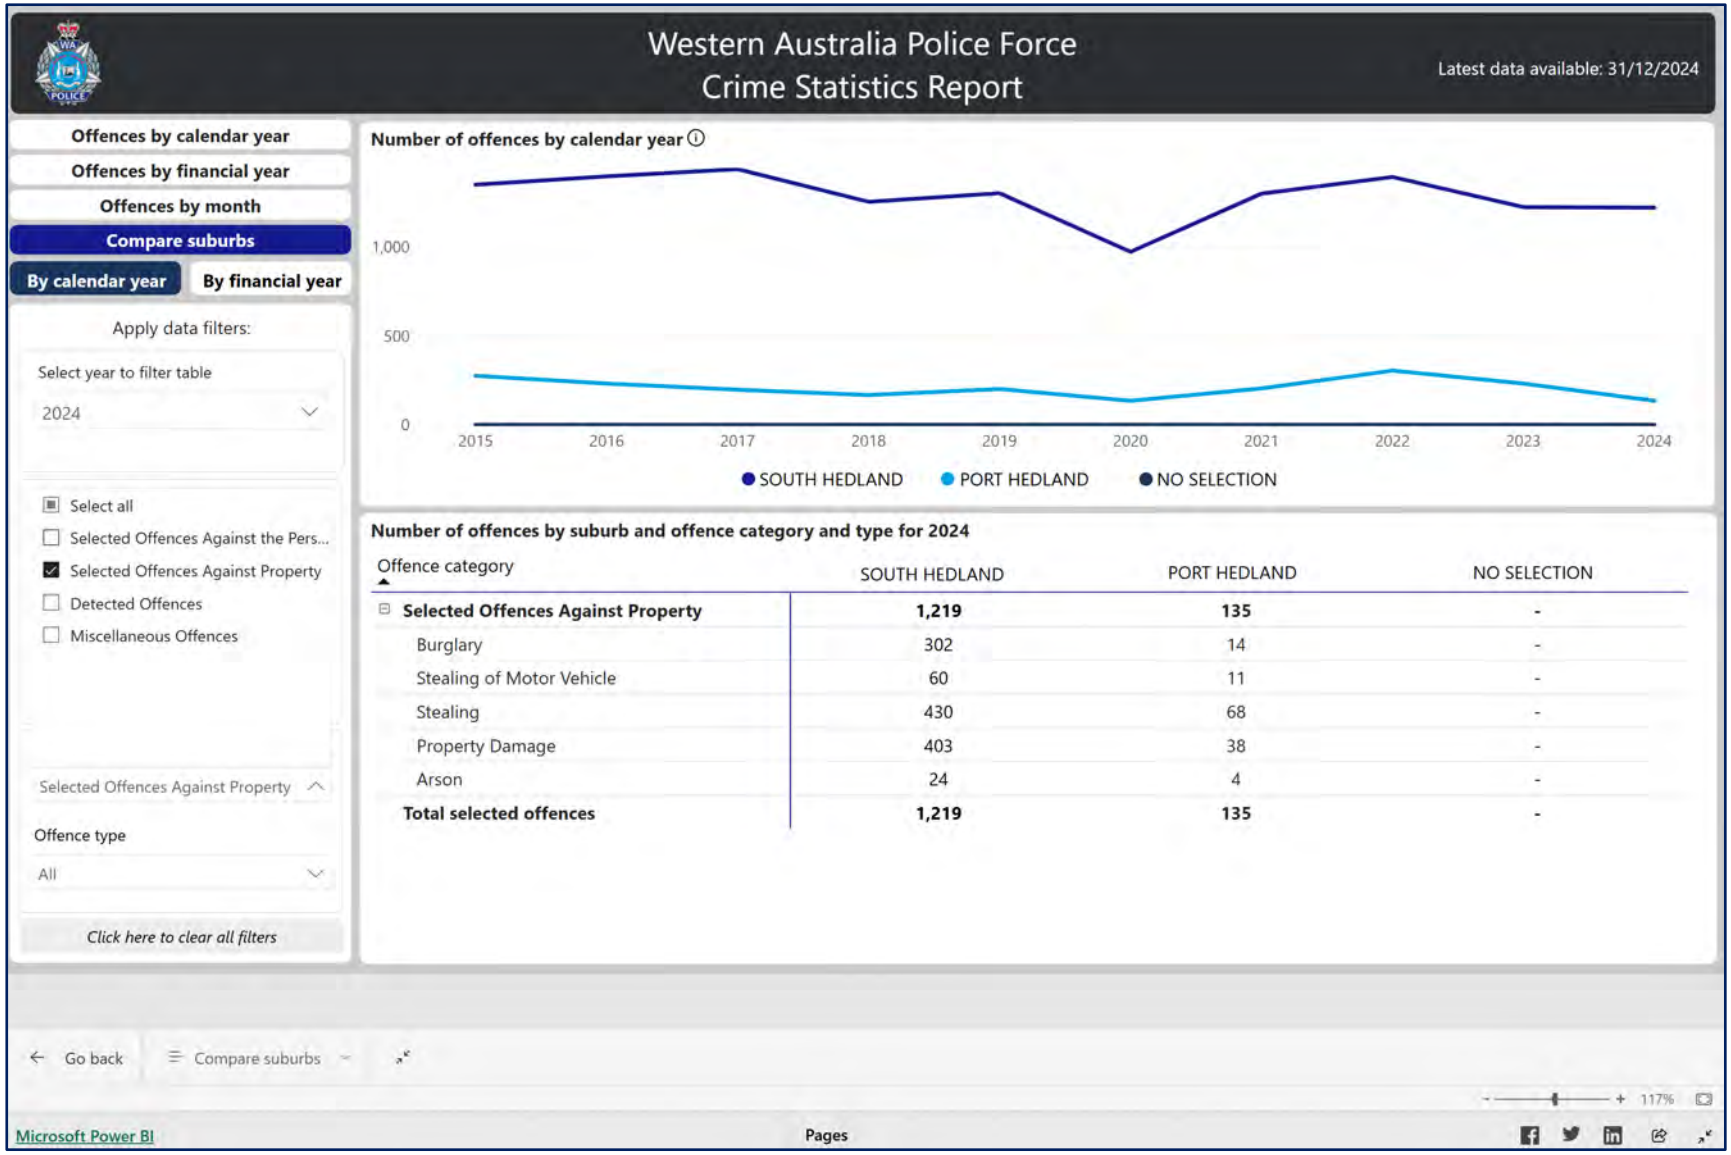

Figure 9-23: Crime Statistics – Property Offences

10. Impact Assessment

This section sets out the impacts (risks and opportunities) that were identified, how they were analysed and ranked both pre and post mitigation and enhancement, by project each phase:

1. Development and Approval
2. Construction
3. Operations

In general terms they can be summarised as follows.

- Community amenity – the impact of SHRA Development operations on community amenity through SHRA Development residents' use, or lack thereof, of local facilities and infrastructure (built and natural) and the use of community services.

- Community cohesion – the impact of SHRA Development operations on community cohesion because of negative or positive social interaction, or lack thereof, between the residents of the SHRA Development and the people that live in South Hedland.

- Community health: – the impact of SHRA Development:

    - construction activities on surrounding residents through noise, odours and dust during the construction period, noise during operations; and,

    - operations activities on individuals and families in the local community through uncontrolled interaction with SHRA Development residents.

- Economic Benefit – to the local community and economic from the use of local goods, services and labour during both construction and operations phases.

- Housing and Accommodation – the impact of the SHRA Development:

    - on the local residential housing market in terms of availability and affordability in the context of an abnormal accommodation market, particularly for Essential Service Workers; and,

    - on the availability and affordability of STA, particularly visiting professionals associated with the childcare, community safety and policing, education, health, and for the NFP sector community services sector.

- Kariyarra people – the recognition of Kariyarra people as the TOs and Common Law Native Title Holders of the land on which South Hedland is located and their socio-economic and cultural participation in the SHRA Development.

- Political participation – the extent to which stakeholders can participate in decisions that affect their lives, and the resources provided for this purpose, i.e., their actual ability to participate in the decision making about the SHRA Development as well as their perceptions of this.

- Security and safety – protection of the SHRA Development and residents from opportunistic crimes against property, and the avoidance of increased offending and so any consequential impacts on offenders and their families through interaction with the justice system.

- Social inclusion and integration – optimising social integration of the SHRA Development and its residents with the community of South Hedland.

- Social conditions – the contribution that the SHRA Development may have on the social conditions of the people of South Hedland.

- Traffic – the impact that increased construction and operations traffic may have in the local area, particularly in Parker and Kennedy Streets and during the peak usage times of 7.30am and 8.30am, and 2.30pm and 3.30pm.

10.1. Main Opportunities

The SHRA Development does provide an opportunity to make a significant contribution toward social and economic conditions in South Hedland and while there are some risks of detrimental impact, these are manageable, and can be outweighed by the positive opportunities, if Grounded, in collaboration with others, takes the appropriate steps to enhance these.

In summary the greatest beneficial impacts that the SHRA Development might make to the South Hedland community are:

1. The provision of affordable short- and long-term accommodation for Essential Service Workers and visitors, particularly for:
    a. short term accommodation for visiting professionals in the areas of childcare, community health, education and the community services sector; and,
    b. long term accommodation for Essential Service Workers.
2. Planned positive social interaction between the SHRA Development and the local community.
3. The training and employment of local people during construction and operations, including through contracting local and Aboriginal businesses.
4. Recognition and involvement of Kariyarra people.

The tables below set out the opportunities, pre and post enhancement for each project phase by Community Benefit Ranking.

Table 10-1: Development and Approvals and Construction Opportunity Summary

Pre Mitigation Community Benefit Ranking	No. Opportunities	Post Mitigation Community Benefit Ranking	No. Opportunities
Low	5	Low	2
Moderate	1	Moderate	3

Pre Mitigation Community Benefit Ranking	No. Opportunities	Post Mitigation Community Benefit Ranking	No. Opportunities
High	0	High	1
Transformational	0	Transformational	0
Total Opportunities	**6**	**Total Opportunities**	**6**

Table 10-2: Operations Opportunity Summary

Pre Mitigation Community Benefit Ranking	No. Opportunities	Post Mitigation Community Benefit Ranking	No. Opportunities
Low	2	Low	0
Moderate	3	Moderate	1
High	0	High	4
Transformational	0	Transformational	0
Total Opportunities	**5**	**Total Opportunities**	**5**

In total, for the SHRA Development there are 11 socioeconomic opportunities that can provide benefit (a positive social impact) to the South Hedland community.

10.2. Main Risks

In contrast to the above, the greatest detrimental impacts that the SHRA Development might have in the South Hedland community are:

1. That the SHRA Development becomes another sole resource industry TWA and does not contribute to the provision of affordable short- and long-term accommodation for Essential Service Workers.
2. That the SHRA Development operations do not contribute to social inclusion and the development of community in South Hedland and that this results in the perpetuation of poor perceptions of FIFO workers by townspeople and of townspeople by FIFO workers and consequent negative relations between the two.
3. That if the management of security and community interaction is not done appropriately and that this results in an increase in opportunistic property crime it will have consequent adverse and long-term impacts on the lives and prospects of offenders and their families, as well as perpetuating adverse views about Aboriginal people, including Kariyarra people, in the broader community.

4. That the construction and operations activities of the SHRA Development fail to realise the opportunities for the use of local goods services and labour, e.g., through training and employment and using local businesses.
5. That Kariyarra people's status as the Traditional Owners of the Hedland area and their culture are not recognised and given appropriate treatment in the design and management of the SHRA Development and this perpetuates negative perceptions of Kariyarra people and Aboriginal people more generally in society.

The tables below set out the risks, pre and post mitigation for each project phase by Community Detriment Ranking

Table 10-3: Development and Approvals Risk Summary

Pre Mitigation Community Detriment Ranking	No. Risks	Post Mitigation Community Detriment Ranking	No. Risks
Low	3	Low	6
Moderate	3	Moderate	0
High	0	High	0

Pre Mitigation Community Detriment Ranking	No. Risks	Post Mitigation Community Detriment Ranking	No. Risks
Low	2	Low	5
Moderate	3	Moderate	5
High	2	High	1
Extreme	4	Extreme	0
Total Risks	**11**	**Total Risks**	**11**

Table 10-5: Operations Phase Risk Summary

Pre Mitigation Community Detriment Ranking	No. Risks	Post Mitigation Community Detriment Ranking	No. Risks
Low	0	Low	7
Moderate	2	Moderate	9
High	10	High	1
Extreme	5	Extreme	0
Total Risks	**17**	**Total Risks**	**17**

In total for the SHRA Development there are 34 socioeconomic risks that need to be managed over the life of the project. Of these, 14 remain moderate after mitigation and two remain high. The remaining 18 can be considered low after appropriate mitigations are applied.

The analysis set out in the following sections discuss each risk and opportunity in detail.

Each risk and opportunity identified are discussed and analysed in the following sections:

- Section 11 discusses impacts on Community Health, Wellbeing and Amenity
- Section 12 discusses impacts on Culture and Society
- Section 13 discusses impacts on Local Economic Participation

Appendix A: Socioeconomic and Cultural Risk Register and **Appendix B: Socioeconomic and Cultural Opportunity Register** set out the technical assessments that underpin the SIMP.

11. Community Health, Wellbeing and Amenity

Community welfare and wellbeing refers to the wellbeing of individuals, families and the community. Often the terms welfare and wellbeing are often used interchangeably, with positive wellbeing associated with being comfortable, happy and healthy.

The OECD Better Life Index48 uses a multi-dimensional approach to measure community welfare and wellbeing, including for current wellbeing; income and wealth, jobs and earnings, housing, health, education, work-life balance, environment, social connections, civic engagement, safety and subjective wellbeing; and, for future wellbeing a four capitals approach: natural, human, economic and social capital.

Community amenity refers to the liveability of a town or community. Contributing factors include aspects of the built environment, e.g., housing, transport, air and water quality, access to the natural environment, parks and recreational facilities, heritage and social and aesthetic aspects of a community.

Amenity can also include the level of access to community services such as childcare, medical and dental care, emergency and public safety services, shops, employment, community health infrastructure, cultural, sporting and leisure services infrastructure and organisations49.

Most community health, wellbeing and amenity impacts can be managed if they are known, understood and actively managed throughout a project.

In this section the following is discussed.

The impact areas discussed here are:

- Planning and approval process: the ability of the local community and stakeholders to participate in the decision-making process that affects their lives through influencing the design of the development.
- Construction and Operations physical impacts:
    - Noise, dust and odours.
    - Traffic management.
- Crime – the attractiveness and ease of access for individuals wishing to engage in opportunistic property theft and damage.
- Community amenity:
    - Land use change.
    - Amenity restraints – transport.
    - Local social and sporting venues and facilities.
    - Local health services impacts.

[48] See https://www.oecdbetterlifeindex.org/ and https://www.aihw.gov.au/reports/australias-welfare/understanding-welfare-and-wellbeing

[49] For example, see: https://www.atap.gov.au/sites/default/files/o3-urban-amenity-liveability.pdf

- Sexual services and local relations.
- Psychosocial health and wellbeing.

- Housing and accommodation.

Risks associated with the above are described in tables below, given an initial Community Detriment Ranking, after which suggested mitigation measures and their likely effects are described, along with a post mitigation Community Detriment Ranking.

Where opportunities are evident, these are analysed and given an initial Community Benefit Ranking, after which suggested enhancement measures and their likely effects are described, along with a post enhancement Community Benefit Ranking.

11.1. Planning and Approval Process Impacts

The planning process set out in **2 Policy and Regulatory Context**, for the SHRA Development required Grounded to prepare and submit a Development Application (DA) that will be assessed and approved (or otherwise) by both the Town and the relevant Regional Development Panel (RDAP), the latter being the ultimate decision maker.

The Town also requires a SIA to be prepared in accordance with international standards and this requires rigorous and independent community engagement, and the SIA Report (this document) is generally made public through the public comment period of 21 days.

These are the formal processes that allow citizens to have a say in how a proposed development will occur.

While the Town is one of the very few Local Government Authorities in Western Australia[50] that requires a SIA for a development of this nature, there remain risks that can occur during the design of the development that if not mitigated, can result in detrimental impacts in a local community.

Table 11-1: Community and stakeholder participation risks

Project Phase: Development and Approvals	
Risk ID#	**Risk Cause and Description**
CHWA1	Community and stakeholders hear about the development proposal through rumour, do not understand the project and so rely on local gossip and second-hand information. Consequently, they become concerned and worried about what is proposed and are influenced by local rumours that results in misinformation and disinformation spreading, causing consequent social division about the project.
Pre Mitigation Community Detriment Ranking	**Likelihood** – Almost Certain **Consequence** – Minor

[50] See Shire of Waroona https://www.waroona.wa.gov.au/Profiles/waroona/Assets/ClientData/LPP_15_Social_Impact_Assessment.pdf.

Project Phase: Development and Approvals	
	Detriment – Moderate
Discussion and Suggested Mitigation and Effect	Grounded undertake a program of local community and stakeholder engagement ahead of the DA application and public comment period to explain the project and to obtain information about the local community's concerns and aspirations about the project. As a result, the local community understand what is going on and their fears and concerns are allayed. While it remains possible that some people are still concerned and rely on rumour and gossip, the consequence of this remain minor.
Post Mitigation Community Detriment Ranking	**Likelihood** – Possible **Consequence** – Minor **Detriment** – Low
Indicators, measures and metrics, sources of information	Risk mitigation can be measured through the number of community meetings held, the number of people who attended, the concerns and aspirations that they raised and the extent to which community input affected the design of the project.
Risk #	**Risk Cause and Description**
CHWA2	If the information provided during the public comment period for the Development Application is limited and the timing and duration of the public comment period is too short and coincides with major holiday periods, e.g., Christmas and New Year, then the extent to which people can participate in decisions that affect their lives, and the resources provided for this purpose is will be restricted.
Pre Mitigation Community Detriment Ranking	**Likelihood** – Almost Certain **Consequence** – Minor **Detriment** – Moderate
Discussion and Suggested Mitigation and Effect	That the information provided in the DA during the public comment period is sufficient for the community and stakeholders to develop informed views and to make submissions if they choose. That the timing and duration of the public comment period is long enough and does not coincide with major holiday periods then community and stakeholders' ability to participate in the decision-making process will not be restricted.

Project Phase: Development and Approvals	
Post Mitigation Community Detriment Ranking	**Likelihood** – Possible **Consequence** – Minor **Detriment** – Low
Indicators, measures and metrics, sources of information	Risk mitigation can be measured through the quality and quantity of the information provided in the DA and when and how long the DA is advertised for public comment. The number and nature of public submissions to the DA will also provide an indication of the community and stakeholders' ability to develop informed views. Sources of information include the Town website and links to the RDAP, as well as information publicised by Grounded on its own social media platforms.

It is noted that alongside the development of this SIA that Grounded conducted its own community and stakeholder engagement process as described in **5.1 Grounded SHRA Community and Stakeholder Engagement**.

11.2. Construction and Operations Environmental Impacts

This section discusses the main potential environmental impacts that might arising during the construction and operations of the SHRA Development.

Mitigation of these impacts should be included in Grounded's CMP and OMP for the SHRA Development.

11.2.1. Noise, Dust, Odours and Light

Table 11-2: Noise, dust, odours and light impacts

Project Phase: Construction and Operations	
Risk #1	**Risk Cause and Description**
CHWA3	During construction activities, particularly when initial land clearing is occurring, there is a risk that noise, odour and dust will be generated that causes temporary nuisance to residents in the vicinity of Wrasse Crescent, Trevally Road, Longtom Loop, Parker Street, Kennedy Street, Coppin Place and Stanley Street. The impact could take the form of noise and odours from earthmoving machinery creates disturbance to urban peace and tranquillity and that dust covers nearby residents' property: houses, gardens, vehicle and laundry causing upset and costs to residents for rectification.

Project Phase: Construction and Operations	
Pre Mitigation Community Detriment Ranking	**Likelihood** – Almost Certain **Consequence** – Minor **Detriment** – Moderate
Discussion and Suggested Mitigation and Effect	The risks and impacts are likely to be very similar to that which will occur during BHP's imminent construction of the 43 houses in the nearby housing estate, although the SHRA Development construction disturbance will occur over a lesser time frame. Appropriate and standard practice mitigation methods such as dust suppression, altered reversing alarms on machinery and vehicles, appropriate emission controls and the normal restricted daylight construction hours in urban areas, are likely to significantly lessen the impact. In addition, if Grounded were to liaise regularly with nearby residents through direct two-way communication and regular public notices through Grounded's website and social media, as a part of a Local Communications Plan, this would ensure that nearby residents are aware of the pace and progress of the development and are able to have direct contact with Grounded during construction. The communications plan should include the establishment of a SHRA Development webpage on Grounded's website and a 1800 number inquiry line and email inquiry form.
Post Mitigation Community Detriment Ranking	**Likelihood** – Possible **Consequence** – Minor **Detriment** – Low
Indicators, measures and metrics, sources of information	The impact could be measured through the establishment of a SHRA Village webpage on Grounded's website and other local social media sites as appropriate. Metrics could include the number of calls to the 1800 line and email inquiry lodging complaints about noise, odour and dust. Sources of information could be from webpage analytics, the 1800 number and email inquiry records and stakeholder meeting records.
Risk #	**Risk Cause and Description**
CHWA10	During operations of the SHRA Development there is a risk that noise and excessive light from the normal facility operations affects neighbouring residents. This includes noise and light from early morning operations

Project Phase: Construction and Operations	
	traffic, e.g., workers buses and vehicles departing between the hours of 5.00am and 6.00am.
Pre Mitigation Community Detriment Ranking	**Likelihood** – Likely **Consequence** – Moderate **Detriment** – High
Discussion and Suggested Mitigation and Effect	It is understood that the SHRA Development design is such that there will be buffer zones, i.e., carparks, running track and vegetation / landscaping barriers, to reduce normal operational noise and light from the facility. However, Grounded should give consideration as to how early morning noise and light can be mitigated for residents immediately opposite the SHRA Development on Kennedy Street, e.g., reversing alarms, bus engines, flashing vehicle hazard lights etc, as the bulk of resource sector workers are expected to depart the area between 5.00am and 6.00am. Controls might include mechanical and procedural light and noise restrictions on speed and engine use and reversing alarms. If managed well the early morning noise and light from operational traffic is minimised to As Low As Reasonably Practicable (ALARP).
Post Mitigation Community Detriment Ranking	**Likelihood** – Possible **Consequence** – Minor **Detriment** – Moderate
Indicators, measures and metrics, sources of information	The impact could be measured through the establishment of a SHRA Village webpage on Grounded's website and other local social media sites as appropriate. Metrics could include the number of calls to the 1800 line and email inquiry lodging complaints about noise and light. Sources of information could be from webpage analytics, the 1800 number and email inquiry records and stakeholder meeting records.

11.3. Traffic

Increases in traffic arising from construction and operations bring risks that may cause detrimental community impacts through increased incidence of traffic crashes that result in injuries and fatalities, i.e., people killed or seriously injured (KSI).

The TIS will inform the Traffic Management Plan (TMP) for construction in Grounded's CMP and for operations in the OMP.

Table 11-3: Traffic impacts

Project Phase: Construction and Operations	
Risk #	**Risk Cause and Description**
CHWA4 and CHWA11	That construction activities increases traffic on local suburban roads, e.g. Parker Street, Kennedy Street, Coppin Way and Stanley Street and so increases the risk of traffic crashes, injuries and fatalities, i.e., people killed or seriously injured (KSI). In this instance the risk is most likely to arise during in the local area, particularly in Parker and Kennedy Streets and during the peak school road usage times of 7.30am and 8.30am, and 2.30pm and 3.30pm. See also **11.5.2 Restricted Amenity – Transport**. Grounded have completed a Traffic Impact Statement (TIS) for the SHRA Development[51] in accordance with the *WA Planning Commission's (WAPC) Transport Impact Assessment Guidelines – Volume 4 Individual Developments* (2016) and the Town of Port Hedland *Traffic Statements and Assessments Information Sheets 6*[52]. According to the Transport Assessment Guidelines a development that is expected to generate between 10-100 vehicle trips in a development peak hour is considered to have only a moderate impact on the transport network and a Transport Impact Statement (TIS) is required to support a Development Application. The main results from the TIS are that during operations, the SHRA Development generate a maximum of 78 vehicle trips during the peak hours of 5.00am – 6.00am in the morning and 6.00pm and 7.00pm in the evening. Overall traffic hours, including peak are expected to be from 5.00am to 8.00am and 4.00pm to 7.00pm. The number of vehicle and machinery movements during construction is expected to be at the lower end of the above and so while the likelihood of a traffic crash in which someone is killed or seriously injured can be assessed as possible, the consequences for them and their families could be major.
Pre Mitigation Community Detriment Ranking	**Likelihood** – Possible **Consequence** – Major **Detriment** – High

[51] South Hedland Regional Accommodation Development (Lot 51 Kennedy Street, Port Hedland) Transport Impact Statement, Flyt (March 2025).

[52] https://www.wa.gov.au/government/publications/planning-guidelines-transport-impact-assessment

Project Phase: Construction and Operations	
Discussion and Suggested Mitigation and Effect	There is a minor overlap between the local traffic peak times and the SHRA Development between 7.30am and 8.00am in the morning that will require the attention and priority of construction and operational management in the organisation within day-to-day operations and standard practices. The main mitigation should be that Grounded implement a Traffic Management Plan (TMP) based on their Traffic Impact Statement (TIS) for both construction and operations that avoids busy times on Parker Street and Kennedy Streets during the hours of 7.30am and 8.30am, and 2.30pm and 3.30pm and minimises any construction or operations traffic risk from Coppin Place and Stanley Street. It is likely that construction traffic could avoid these times completely and that operations traffic risk could be lowered to ALARP. In any event where someone is killed or seriously injured can be assessed as possible, the consequences for them and their families could be major and so requires the attention and priority of senior executive and operational management levels in the organisation.
Post Mitigation Community Detriment Ranking (Construction)	**Likelihood** – Unlikely **Consequence** – Major **Detriment** – High
Post Mitigation Community Detriment Ranking (Operations)	**Likelihood** – Possible **Consequence** – Major **Detriment** – High
Indicators, measures and metrics, sources of information	The key establishment indicator is that a TMP is put in place for both construction and operations within the SHRA Development CMP and OMP that avoids peak traffic times on surrounding roads in accordance. The primary metric is the number of traffic crashes involving SHRA Development construction and operations vehicles and the consequences of these in terms of KSI. Information sources will include local print and social media mentions, police traffic crash reports, Hedland Health Campus ED presentations and Grounded's IMS.

11.4. Crime

All stakeholders consulted without exception sighted the almost certain likelihood that without appropriate security measures in place, during both construction and operations, the SHRA

Development will become an attractive target for local youth and others intent on engaging in opportunistic crimes against property.

Table 11-4: Crime risk in construction and operations

Project Phase: Construction and Operations	
Risk #	**Risk Cause and Description**
CHWA5, CHWA12, CS5 and CS6	Inevitably, opportunistic crime will arise from offenders targeting unlocked (or poorly secured) vehicles, machinery, guest rooms, buildings and sheds to steal valuables and / or damage property. Stolen vehicles are then often used to commit other offences and / or are driven elsewhere, often dangerously and under the influence of Alcohol and Other Drugs (AOD) and this can put people, emergency services personnel, the offenders themselves, other community members and the public at great risk. This risk will be heightened during construction if vehicles, machinery and other movable assets cannot be removed or secured during the construction period. During construction the risk of theft and vandalism will also be very high, e.g., smashing windows, stealing materials and tools, spraying graffiti and the like. The consequences of such opportunistic crime can be manifold and vary in their ultimate severity ranking: • That offenders when apprehended will go through the relevant justice system procedures, the consequences of which can be **High** and possibly **Extreme** for them and their families. • Detrimental impacts on others such as emergency services personnel or the public can also be **High** to **Extreme**. • If apprehended offenders are local Aboriginal people, then this would create and add to already negative perceptions and stereotyping of and about Aboriginal people and South Hedland generally, among SHRA Development, staff and guests, who are likely to come from far and wide. Without specific mitigation, the severity of this risk is considered **High**. On balance without mitigation a collective assessment is below.
Pre Mitigation Community Detriment Ranking	**Likelihood** – Almost Certain **Consequence** – Major **Detriment** – Extreme
Discussion and Suggested	Most TWAs defend against this security risk with high fenced and gated facilities and other security measures such as CCTV, and 24-hour manned

Project Phase: Construction and Operations	
Mitigation and Effect	security, and having all these measures in place, while not ridding of the risk totally, will most often result in a low residual detriment ranking. However, Grounded and the Town share aspirations for social integration and participation of the SHRA Development and a high security facility is unlikely to achieve this aim. Such facilities are not well thought of by locals and provide little indications to the community that they are welcome. This approach would also result in a low level of beneficial impact for the community. In this sense, it is understood that Grounded do not intend to construct and operate the SHRA Development as a high fenced and gated facility and intend to rely on passive and active security measures such as staff and guest vigilance, CCTV and 24-hour mobile manned security. Other initiatives that would likely enhance this approach would be: • to seek to have Aboriginal culture, and Kariyarra culture specifically, overt in the design and aesthetic of the SHRA Development, and • to have an Aboriginal presence, ideally with overt Kariyarra branding, in the proposed 24-hour mobile security team – either through direct employment or contracting of an existing Aboriginal owned security service. Employing these tactics would significantly reduce the opportunity for theft and the involvement Kariyarra culture and people in security will lessen the attractiveness of the SHRA Development as a target. In construction the risk likelihood could be reduced to unlikely and in operations to possible. In both cases, if the worst-case scenario occurred then the consequences would be major, so the residual severity ranking remains high. This means that so the risk requires the attention and priority of senior executive and operational management levels in the organisation, at least until the SHRA Development is in steady state operations and security strategies and experience is tested.
Post Mitigation Community Detriment Ranking (Construction)	**Likelihood** – Unlikely **Consequence** – Major **Detriment** – High
Post Mitigation Community Detriment Ranking (Operations)	**Likelihood** – Possible **Consequence** – Major **Detriment** – High

Project Phase: Construction and Operations	
Indicators, measures and metrics, sources of information	The key establishment indicator is that a security strategy is put in place in the CMP and OMP and the primary metrics will be the number of theft and property and person damage events. Information sources will include local print and social media mentions, police traffic crash reports, Hedland Health Campus ED presentations and Grounded's IMS. Formal source organisations include WACHS, WAPOL.

11.5. Community Amenity

Community amenity refers to the liveability of a town or community. It includes the built environment, e.g., housing, transport, air and water quality, access to the natural environment, parks and recreational facilities, heritage and social and aesthetic aspects of a community.

Amenity can also include the level of access to community services such as childcare, medical and dental care, emergency and public safety services, shops, employment, community health infrastructure, cultural, sporting and leisure services infrastructure and organisations.

In the context of the SHRA Development, impacts on community amenity may include:

- the change in land use of the site to the SHRA Development and its impacts on adjoining land users and surrounding neighbours' ability to preserve and maintain reasonable amenity to their properties and the surrounding area,
- impacts on existing residents' ability to access and use local community services and social infrastructure such as health services, local social and sporting venues and facilities, and local transport,
- impacts on existing residents' ability to access and use local health services,
- impacts on community health arising from increases in sexual services and relations with the local population, and,
- psychosocial health and wellbeing.

These are discussed below in terms of both risk and opportunity, and associated mitigation and enhancement strategies and plans.

11.5.1. SHRA Development Land Use Change

As shown in **1.4 Land Use History** the previous land use of the site was a TWA for the BHP Iron Ore workforce. As this was never properly rehabilitated, the present land parcel is disused and neglected and there are prior use remains in the form of concrete footpaths, buried electrical cable, derelict and vandalised buildings, and the site is inundated with weeds.

A site visit found that it is not evident that the area is regularly used for anti-social behaviour; however, it is trespassed on and is known as being used by people conducting criminal activity in the surrounding streets to avoid apprehension (see also **11.4 Crime)**.

On three sides, the site is adjacent to residential housing and on one, the Pundulmurra campus of the North Regional TAFE.

The proposed development is not inconsistent with the prior land use as it was previously a TWA; however, the proposed development is more in the nature of STA, given the target market and the initiatives Grounded are considering making regarding permanent residential accommodation and affordable STA accommodation.

Sensitive development of the site with appropriate security measures will add to, not detract from amenity in the surrounding community so land use change is therefore not considered a risk, except to the extent that any anti-social behaviour that occurs on the site will be displaced elsewhere.

11.5.2. Restricted Amenity – Transport

In terms of restricting the amenity of adjoining land users and neighbours, e.g., access to local transport infrastructure, impacts from the SHRA Development is unlikely. Ingress and egress to the SHRA Development during operations will be from the existing entry used throughout the Pundulmurra Village operations period which has an existing slip lane to the entry.

Parker Road is a suburban arterial road that is used commonly for ingress and egress from the surrounding streets, residences and workplaces in South Hedland. These include North Regional TAFE, South Hedland Primary School, Hedland Senior High School, Mirnutharntu Maya and others. Parker Street is part of the TransHedland's public bus route as shown in **Figure 9-20: TransHedland Regional Bus Route** and **Figure 9-21: TransHedland South Hedland School Bus Routes**. Less relevant, is that Stanley Street is also used for bus services.

The activities of the SHRA Development will use the existing roads and residents will not likely use the bus services to any great degree as resource sector guests will typically work 10–12-hour shifts and so most will have left the facility prior to the first bus arriving on Parker Street at 0843hrs and will return after the last bus at 1633hrs[53]. Essential Service Worker guests are most likely to have their own transport.

The risk here though is that increased traffic on local roads might cause greater incidence of traffic crashes, as discussed previously in **11.3 Traffic**.

11.5.3. Local Sporting Venues and Facilities

There is often the possibility that developments such as the SHRA Development have the potential to place greater stress on local social and sporting venues and facilities, depending on the use of these by guests and staff.

Conversely, SHRA Development guests may be able to participate in and contribute to the breadth and depth of local sporting and cultural activities and their organisations, e.g., through participating in local sporting events and using local facilities.

Offsetting the above somewhat is that Grounded intend to provide some sporting and recreational facilities at the SHRA Development. These include:

- a recreation building providing indoor activities,
- an indoor and outdoor gymnasium,
- a swimming pool, and
- a multi sports court and running track.

[53] https://www.transregional.wa.gov.au/timetablepdfs/regional/active/Port%20Hedland%20Timetable%201.pdf

In community engagement the only concerns raised regarding additional pressures on local social and sporting venues and facilities were that Grounded's provision of the above would lessen people's use of these facilities and so work against social interaction and inclusion, i.e., *"… be like any other TWA and do nothing for South Hedland[54]"*.

Equally, if the SHRA Development sporting facilities were open to the public then it was viewed that there would be detrimental competition with Town (and taxpayer / ratepayer) funded facilities, especially if the result were to be that nearby residents were to gravitate away from Town facilities to SHRA Development sporting facilities.

From a sporting perspective, there is a list of some 31 types of sporting groups representing different sporting codes, all with varying numbers and teams listed on the Town's website[55]. To undertake consultation with them all was not considered commensurate with the scale and nature of the SHRA Development and so this SIA.

It is understood that local stakeholders lament the introduction of FIFO / DIDO workers as having a negative impact on the social fabric of regional mining towns. It is also understood that resource sector FIFO / DIDO employees typically work 10 – 12 hours shifts each day while on roster, and depending on the length of the roster, may only have one free day off every three weeks on, as two weeks on and one week off rosters are most common. The likelihood of them participating in local sporting activities is low.

Contact should be made with the Town's officer responsible for sports and recreation to obtain their perspectives on FIFO / DIDO workers' participation in local sports and recreation.

11.5.4. SHRA Development Social Facilities

It is common practice among the other TWAs in South Hedland and elsewhere to offer free use of meeting rooms and facilities to local community groups and NFPs when these are available. These offerings are well thought of and were seen as something that Grounded should consider.

The opportunity for use of facilities that could hold larger gathering for social and cultural events were also considered attractive.

Some discussion was had regarding public access to the proposed dining hall and tavern at the SHRA Development and there were varying views. Some thought that South Hedland did not need another licensed venue while others welcomed the opportunity for diversity in hospitality offerings.

These matters are discussed further in **15.1 Striking the Right Balance.**

11.5.5. Sexual Services and Local Relations / Alcohol and Other Drugs

Historically, in regional and remote areas of Australia where there is the development of workers' camps, particularly for larger resource projects and where residents are largely young, single males, several risks and detrimental impacts can arise.

Historically, where no controls on Alcohol and Other Drugs (AOD) have been put in place for TWAs, there has been seen significant increases in the use of AOD, legal and illegal. Increased and

[54] Pers. Comm. Individual stakeholder.

[55] https://www.porthedland.wa.gov.au/our-community/sports-and-recreation/sporting-groups.aspx

unrestricted usage of AOD contributes significantly to the risk and detrimental impacts associated with sexual services and local sexual relations.

These matters are assessed in the table below.

Table 11-5: Sexual services and local relations / AOD risk

Project Phase: Construction and Operations	
Risk #	**Risk Cause and Description**
CHWA6, 6, 7, 8, 13, 14, 15	The risks that can arise if there are no controls over the construction workforce or the operations staff and guests can include: • an increase in the presence of sexual services operators in the community responding to the need to satisfy an increased demand, with potential attendant instances of modern slavery[56], • advent of casual sexual relations between workers and residents, and consequent increases in domestic violence arising from relationship jealousies, and • increases in the incidence of Sexually Transmitted Infections (STIs) and Blood Borne Viruses (BBVs) in the community. The construction labour force for the SHRA Development is expected to be on average about 30 workers, peaking at 50. The operations labour force for the SHRA Development is expected to be on average about 10 workers, peaking at 20. The number of workers and guests expected at the SHRA Development during operations if the facility is full, would be in the vicinity of 300, including staff. Unmitigated, these risks are almost certain to occur and can have a major impact in the community, so the risk severity ranking must reflect this.
Pre Mitigation Community Detriment Ranking (Construction and Operations)	**Likelihood** – Almost Certain **Consequence** – Major **Detriment** – Extreme
Discussion and Suggested Mitigation and Effect	It is understood that the construction workforce for the SHRA Development will be accommodated in existing TWA facilities and will be subject to the controls in place in those facilities. It is also understood that Grounded's construction team are highly experienced in working in regional and remote areas.

[56] It is understood that there are venues in the LGA that offer such services.

Project Phase: Construction and Operations	
	Today, in most TWAs controls are put in place for residents that limit the amount of alcohol they can consume each day / evening and most often this is restricted to four mid strength beers - equivalent to four standard drinks and is controlled by a card system or similar. Local public access to licensed venues is also prohibited. Most resource companies also implement drug testing for their workers. With these controls during construction the mitigated risk of detrimental impact is considered unlikely to occur and the consequences in numerical terms likely moderate, so this is reflected in a Moderate risk severity. With the greater numbers involved during operations of the SHRA Development additional measures should be considered such as: • A SHRA Development Code of Conduct for Staff and Guests. • Education on sexual health and wellbeing available to staff and guests.
Post Mitigation Community Detriment Ranking (Construction)	**Likelihood** – Unlikely **Consequence** – Moderate **Detriment** – Moderate
Post Mitigation Community Detriment Ranking (Operations)	**Likelihood** – Possible **Consequence** – Major **Detriment** – High
Indicators, measures and metrics, sources of information	The key establishment indicator will be the arrangements that Grounded have in place for the control of their construction workforce. Primary metrics will include directly attributable incidents involving SHRA Development construction and operations workers, and / or SHRA Development guests associated with: • AOD driven violence and offences against the person, and • medical treatments required because of STIs and BBVs, Evidence of newly established sexual service outlets in South Hedland will also be an indicator. Information sources will include, police incident reports, Hedland Health Campus ED presentations and Grounded's IMS. Formal source organisations include the Town, WACHS, WAPOL.

While the AOD controls referred to above are likely to reduce the risks referred to, hard restrictions on alcohol and prohibitions on public access are unlikely to achieve shared aspirations for social inclusion and participation that are desired, given the target market that Grounded is aiming for, i.e., a mix of TWA and STA.

These matters are discussed further in **15.1 Striking the Right Balance.**

11.5.6. Local Health Services Impacts

Commonly, SIA assessed whether there is likely to be any impact on local health services caused by the construction and operations workforces and guests, i.e., displacement of services that restrict local community access.

This risk in the context of the SHRA Development is assessed in the table below.

Table 11-6: Health services impacts

Project Phase: Construction and Operations	
Risk #	**Risk Cause and Description**
CHWA6, 9 and 16	Impact on local health services caused by the construction and operations workforces and guests. The construction labour force for the SHRA Development is expected to be on average about 30 workers, peaking at 50. The operations labour force for the SHRA Development is expected to be on average about 10 workers, peaking at 20. The number of workers and guests expected at the SHRA Development during operations if the facility is full, would be in the vicinity of 300, including staff. Outside of the Hedland Health Campus ED facility there is no GP Clinic in South Hedland or Port Hedland that operates after hours or on weekends and public holidays. Consequently, there may be some increased pressure on the Hedland Health Campus ED for general medical services. While this is possible the consequence in terms of service displacement is likely to be low.
Pre Mitigation Community Detriment Ranking (Construction and Operations)	**Likelihood** – Possible **Consequence** – Minor **Detriment** – Low
Discussion and Suggested Mitigation and Effect	At the 2021 Census, there were 11,046 people normally resident in South Hedland, a 14% increase since 2011 and 15% since 2011. While the SHRA Development contribution equates numerically to 2.7% of the 2021 population, it should be considered not as an increase in resident

Project Phase: Construction and Operations	
	population, but rather a partial increase in the daily non-resident population as many are already regular commuters to and from Hedland. In addition, the demographic nature of the expected guests at the SHRA Development will be largely young, fit and healthy people and so general impact on health services can be expected to be low. The numbers of people involved during construction is nominal in comparative terms and will be serviced by Grounded's onsite First Aid facilities and after hours the medical facilities in the TWA where they are accommodated. It is understood that Grounded will have a first aid room during SHRA Development operations to be staffed by qualified personnel to be employed by the SHRA Development Operator. An additional initiative to reduce the likelihood of unnecessary presentation to ED would be to have a telehealth arrangement in place with a Perth based medical services provider. In the context of the envisaged resource sector demand and permanent population increases predicted by the Town in coming years, the impact of the SHRA Development on local health services can be expected to be minimal.
Post Mitigation Community Detriment Ranking (Construction and Operations)	**Likelihood** – Unlikely **Consequence** – Minor **Detriment** – Low
Indicators, measures and metrics, sources of information	The key indicator will be presentations at Hedland Health Campus ED attributable to SHRA Development staff and guests. Periodic liaison with WACHS to understand how to best monitor increased presentations at the Hedland Health Campus from SHRA Development workers and guests can best be measured and mitigated.

11.5.7. Psychosocial Health and Wellbeing

In 2014 – 2015, the WA State Government's Education and Health Standing Committee embarked on the "*Inquiry into mental health impacts of FIFO work arrangements*"[57].

A key understanding from the Inquiry was that typical FIFO works come from the highest risk demographic for mental illness and suicide – men between the ages of 18 and 44.

[57] Inquiry into FIFO

The Inquiry noted that:

> *"FIFO takes such an individual regularly away from home, puts him in isolation from his family and other social supports, subjects him to fatigue and then controls his life within the camp environment. Understandably, this can have a significant impact on his emotional health and wellbeing."*

The Inquiry Report also noted that:

> *"The Committee was disappointed to find that recognition of the importance of connection to family and community to workers' mental health is not widespread. The industry does not appear to be sufficiently devoted to establishing residential and FIFO camps close to communities.*
>
> *Closer interaction between accommodation camps and communities is thought to be good for both."*

The Committee recommended the development of a Code of Practice to address FIFO work arrangements and their impact on workers' mental health that should provide guidance of best practice to promote improved mental and emotional health and wellbeing amongst a workforce.

Most recently, the WA Government Implemented a Code of Practice relating to the management of psychosocial hazards in the workplace.[58]

The Inquiry also recommended that public community impact assessments be done and that decision-making processes demonstrate how community concerns have been considered. Where decisions that go against community preference are made, the reasons for these should be made clear.

Grounded has made public its commitments regarding psychosocial hazards in its Vision for the SHRA Development (see **Box 1-1: Grounded's SHRA Vision**) and the proposed location of the SHRA Development within the urban area of South Hedland provides the opportunity to create such a desired facility that could make a significant contribution to the aims of the State Government and the Town in this regard.

Indeed, the SHRA Development could make a positive contribution to culture and society in South Hedland and beyond.

See also **12.3 Workforce Diversity and Inclusion, Sexual Harassment, Discrimination**.

11.6. Housing and Accommodation

By far the biggest issue raised by consultation participants was the perception that the SHRA Development would reduce the availability of residential land on the market for a period of 10 – 15 years and so exacerbate the current and real problem of affordable housing for the townspeople of South Hedland.

Consequently, significant attention has been paid to this discussion notwithstanding the limitations to the SIA scope.

[58] https://www.worksafe.wa.gov.au/sites/default/files/atoms/files/221154_cp_psychosocialhazards.pdf

Project Phase: Operations	
Risk ID#	**Risk Cause and Description**
CHWA17	The risk that the use of the land for the SHRA Development causes a reduction in the availability of land for residential and affordable housing, sufficient to increase pressure on the local housing market. As this has been shown in **9.8 Housing and Accommodation**, the issue of housing and accommodation in South Hedland is multi-faceted and is a far broader issue than the subject of this SIA, which seeks to address only the impacts of the SHRA Development. It is also a cross-cutting issue in that it has community health, safety and wellbeing aspects, as well as economic, societal and cultural aspects. Over the past 30 years, effectively since the widespread adoption of FIFO, neither the State, the Town nor the major owners of housing or operators / sponsors of existing TWA facilities have been able to resolve this problem. Clearly, there has been market failure in the housing market in Port Hedland caused by the impacts of FIFO. In the current housing market in South Hedland, the land proposed for the SHRA Development is not likely to be developed for private residential housing in the short term. If it were, and based on the estimates set out previously. Even if it were, and assuming a building permit issue rate of 10 – 15 per year, it would similarly take 10 – 15 years or more, to develop the area fully, and it is also noted that there has been no housing proposal for this area since the Pundulmurra Camp was decommissioned in 2015, so clearly the prospects of open housing market development in the short to medium term, and possibly the longer term is very low. Considering all the above, and the low level of residential building permits being issued in South Hedland, it is unlikely that the land proposed for the SHRA Development will have any significant detrimental impact on land availability for housing in South Hedland. This is despite the huge, expected demand for both TWA / STA to meet expected developments in the resources and industrial sector, and the residential housing demand predicted by the Town in the coming years for Essential Service Workers, and noting the other TWA / STA and Essential Service Worker accommodation proposals under consideration. The scale of the Grounded SHRA Development proposal represents an increase of TWA / STA beds of between 4.3% and 5.2% of the current Port Hedland, South Hedland and Airport Precinct available beds – including its proposal to immediately construct 15 townhouses. The consequence of the land use proposal would be moderate at worst as any impact on the local housing market would be moderate and medium

Project Phase: Operations	
	term. So, so the detriment ranking for the use of the land for the SHRA Development must be considered as moderate in the circumstances.
Pre Mitigation Community Detriment Ranking	**Likelihood** – Unlikely **Consequence** – Moderate **Detriment** – Moderate
Discussion and Suggested Mitigation and Effect	Grounded are considering allocating a proportion of the site to new, permanent residential housing in the form of 15 three-bedroom, three-bathroom townhouses and possibly offering a proportion of these for long term leases to Essential Service Workers. Additionally, Grounded are considering offering a proportion of the STA beds at subsidised rates for Essential Service Workers and are contemplating transitioning the whole site to permanent residential accommodation when and if this becomes commercially feasible. If this occurs, it may represent significant transitional opportunity in the market more broadly and offer a potential long-term solution to the housing problem in South Hedland. This is discussed further below as an opportunity for beneficial community impact.
Post Mitigation Community Detriment Ranking	**Likelihood** – Unlikely **Consequence** – Insignificant **Detriment** – Low
Indicators, measures and metrics, sources of information	The key establishment indicators will be the construction of the 15 permanent townhouses and the allocation of a proportion of these for long term lease to Essential Service Workers. Similarly, the construction of the STA and the proportion offered at subsidised rates to Essential Service Workers. Metrics can include the proportion of the townhouses and STA beds allocated and the take up of this offering calculated on an annual basis. The total annual sum of any subsidy can be considered as a contribution to community service delivery and the Social Return on Investment (SROI) of this sum calculated. Sources of data and information can include the JDAP and Town approval conditions, long term leases advertised to the local market, arrangements with public and NFP organisations for Essential Service Worker accommodation.
Risk #	**Risk Cause and Description**

Project Phase: Operations	
CHWA18	The real risk associated with the SHRA Development is that given the expected developments and demand from the resources and industrial sectors, is that the SHRA Development ends up as a typical TWA, whose residents are dominated by FIFO and DIDO workers, as it is overwhelmed by demand and the incentive for long term profit opportunity for the SHRA Development Operator. Unmitigated and considering the broader context, the detriment ranking should be considered high as there would then be some 5.1 ha (less area for the proposed townhouses) of potential residential land that would become quarantined from residential housing development for the long term, little or no opportunity provided to Essential Service Workers and so little or no benefit to South Hedland.
Pre Mitigation Community Detriment Ranking	**Likelihood** – Possible **Consequence** – Major **Detriment** – High
Discussion and Suggested Mitigation and Effect	Refer to the mitigation discussion above and the opportunity assessment below.
Post Mitigation Community Detriment Ranking	**Likelihood** – Unlikely **Consequence** – Insignificant **Detriment** – Low
Indicators, measures and metrics, sources of information	Refer to the mitigation discussion above and the opportunity assessment below.

While the distorted market deserves a broader and independent study as previously suggested, does a partial answer to the issue of affordable housing in Port and South Hedland lie in the nature of the development being proposed by Grounded? Should the Grounded model be considered for all existing and future TWAs?

In other words, does the answer, or the responsibility to address the housing problem, lie not just in the development of dedicated subsidised housing estates for Essential Service Workers and Public Private Partnerships (PPPs) between the State and the urban development industry, but rather require a more nuanced and hybrid approach to address the market failure.

The reason that the Town exists is largely because of the resources sector. Absent the inland resources which are mined, then transported and exported through Port Hedland, the place would

exist only to serve the pastoral sector and the original inhabitants of the country, the Kariyarra people and their neighbours, the Nyamal, Ngarla and Palyku, and those whose country is further afield.

In this regard, the Hedland Housing Steering Committee, which is comprised only of State and Local Government agencies may well benefit from being broadened to include the private sector responsible for the TWAs and the bulk of the demand for housing.

As noted above, Grounded have indicated their intention to consider three things:

1. Allocate a proportion of the site to new, permanent residential housing in the form of 15 three-bedroom, three-bathroom townhouses for long term rental to Essential Service Workers
2. Contemplate offering a proportion of the STA beds at subsidised rates for Essential Service Workers.
3. Transition the whole site to permanent residential accommodation over time when it is commercially feasible to do so.

Figure 11-1 below shows how Grounded envisage how the land may be developed in the future for permanent residential housing.

Figure 11-1: Grounded's future vision for SHRA Development

Grounded also suggest that their target market for the initial SHRA Development includes professionals visiting South Hedland to provide a range of services to the private sector, the public sector (government agencies) and the community and NFP sectors.

So, in terms of the potential opportunity that the SHRA Development offers, the following can be considered.

Table 11-7: SHRA Development housing and accommodation opportunity

Project Phase: Operations	
Opp ID#	**Opportunity Cause and Description**
OPP#7	The development of the townhouses to meet the current market demand will immediately increase the long-term rental stock in South Hedland by providing accommodation for between 45 and 90 persons, or 15 x 3-bedroom residences. It is likely that these opportunities will be taken up by the existing market and so on its own, this will result, conservatively, in a moderately beneficial impact in the local community and economy.
Pre Enhancement Community Benefit Ranking	**Likelihood** – Likely **Consequence** – Moderate **Benefit** – Moderate
Discussion and Suggested Enhancement and Effect	Should Grounded subsidise any of the townhouses for Essential Service Workers then the opportunity for increased provision of community services will be significantly enhanced and could be considered as having a highly beneficial impact in the local community and economy. While the quantum of accommodation available would not change, the difference between the market rate for the rental received and the rental charged would allow for this saved cost to be expended directly in community service delivery. The beneficial impact of this could be quite significant if the Social Return on Investment (SROI) [59] was calculated.
Post Mitigation Community Benefit Ranking	**Likelihood** – Almost Certain **Consequence** – Moderate **Benefit** – High
Indicators, measures and metrics, sources of information	Indicators and measures are the same as that associated with the risk of not enhancing this opportunity. The key establishment indicators will be the construction of the 15 permanent townhouses and the allocation of a proportion of these for long term lease to Essential Service Workers. Similarly, the construction of the STA and the proportion offered at subsidised rates to Essential Service Workers.

[59] https://www.betterevaluation.org/methods-approaches/approaches/social-return-investment

Project Phase: Operations	
	Metrics can include the proportion of the townhouses and STA beds allocated and the take up of this offering calculated on an annual basis. The total annual sum of any subsidy can be considered as a contribution to community service delivery and the Social Return on Investment (SROI) of this sum calculated. Sources of data and information can include the JDAP and Town approval conditions, long term leases advertised to the local market, arrangements with public and NFP organisations for Essential Service Worker accommodation.
Opp ID#	**Opportunity Cause and Description**
OPP#8	The addition of an additional ~250 TWA / STA beds to meet the expected market demand will bring greater competition to the local market and free up other STA beds. It will certainly also provide a high quality and attractive offering in South Hedland, which presently does not exist. It is possible that the community, e.g., Essential Service Worker organisations, will be able to take up the opportunity but the contribution to the local economy from this can be expected to be minor, so overall, a moderate benefit at best, to the local community.
Pre Enhancement Community Benefit Ranking	**Likelihood** – Possible **Consequence** – Minor **Benefit** – Moderate
Discussion and Suggested Enhancement and Effect	Should Grounded subsidise any of the STA beds for Essential Service Workers then the opportunity for increased provision of community services will be significantly enhanced and could be considered as having a highly beneficial impact in the local community and economy. While the quantum of accommodation available would not change, the difference between the market rate for the rental received and the rental charged would allow for this saved cost to be expended directly in community service delivery. The beneficial impact of this could be quite significant if the Social Return on Investment (SROI) was calculated.
Post Mitigation Community Benefit Ranking	**Likelihood** – Almost Certain **Consequence** – Moderate **Benefit** – High
Indicators, measures and	Indicators and measures are the same as that above.

Project Phase: Operations	
metrics, sources of information	

Any subsidy that Grounded provides to Essential Service Worker accommodation should be recognised as a part of Grounded's social investment in the community.

Thus, it is possible that the greatest opportunity and resultant community benefit that the SHRA Development might provide to the South Hedland community would be the provision of affordable short- and long-term accommodation for Essential Service Workers over the medium to long-term using a hybrid TWA / STA / Permanent Housing development model.

It is for Grounded to determine the scale and timing of any allocation and subsidy but nonetheless, it will be important for the parties involved to agree on how to measure the impact of this opportunity.

It is not certain that locking in a transition to permanent housing for the whole site would necessarily be of benefit to the community, given the time frames and the need for commercial feasibility to meet market demand.

The Local Housing Strategy being developed and implemented by the Town calls for proponents of workforce accommodation camps to include service worker housing and community rooms as part of their social impact assessment and management plan.

This is exactly what Grounded are proposing for the SHRA Development but in an enhanced form.

12. Culture and Society

The impact theme of culture and society refers to the impacts that can occur in local communities arising from a development that might affect local harmony, social cohesion and identity, and so erode or positively contribute to the culture of a community.

In addition, discussion in this theme also looks at the detrimental or beneficial impacts on local Australian and Indigenous Australian culture and heritage, this as precursor to the section on Kariyarra socioeconomic and cultural participation in **14 Kariyarra Community Involvement**.

The impact areas discussed here are:

- Planning and approval process:
    - Engagement with Kariyarra people in the development.
    - Impacts on native title rights and interests and Aboriginal cultural heritage and the extent to which Kariyarra people use these processes to have a say on the SHRA Development.
- Social cohesion, integration and identity:
    - Perceptions of FIFO and DIDO Workers in the community.
    - Perceptions of Aboriginal people.
    - Workforce diversity and inclusion, sexual harassment and discrimination.

Risks associated with the above are described in tables below, given an initial Community Detriment Ranking, after which suggested mitigation measures and their likely effects are described, along with a post mitigation Community Detriment Ranking.

Where opportunities are evident, these are analysed and given an initial Community Benefit Ranking, after which suggested enhancement measures and their likely effects are described, along with a post enhancement Community Benefit Ranking.

12.1. Kariyarra, Native Title and Aboriginal Cultural Heritage

In Australia, the *Native Title Act 1993 (Cth)* allows for the recognition and protection of native title and establishes processes for the grants of land that may affect native title, expect where it has been validly extinguished by a past act of granting land.

When Aboriginal groups such as the Kariyarra people are successful in having their native title to their traditional lands recognised through a Native Title Determination in the Federal Court they obtain confirmed status as the Traditional Owners (TOs) of the land involved.

Despite this, often TOs are not recognised as the common law native title holders of the land on which a project is being developed and are upset that recognition is not appropriately made.

Similarly, Aboriginal Cultural Heritage (ACH) in WA is protected under the *Aboriginal Cultural Heritage Act 1972 (WA)* (AH Act), which also allows for land use proponents to seek approval for disturbance to ACH. The AH Act provides procedural rights for the TOs and knowledge holders of the land in question.

These matters are assessed in the table below.

Table 12-1: Kariyarra recognition, native title and cultural heritage impacts

Project Phase: Development and Approvals	
Risk ID#	**Risk Cause and Description**
CS 1	That the Kariyarra people are not recognised as the TOs of the land on which the SHRA Development is proposed, and that recognition is not appropriately made.
Pre Mitigation Community Detriment Ranking	**Likelihood** – Likely **Consequence** – Minor **Detriment** – Moderate
Discussion and Suggested Mitigation and Effect	That Grounded undertake early engagement with the Kariyarra Aboriginal Corporation RNTBC (KAC) by senior level Grounded representatives to establish an appropriate relationship with the Kariyarra people contained in an appropriately agreed form. It is noted that Grounded have engaged with the Kariyarra people appropriately and that these discussions are ongoing.
Post Mitigation Community Detriment Ranking	**Likelihood** – Unlikely **Consequence** – Insignificant **Detriment** – Low
Indicators, measures and metrics, sources of information	The key establishment indicators are that initial engagement with KAC Kariyarra CEO and Board occurs, that mutual agreement is reached about the nature of the relationship and on the way forward for relationship establishment. The qualitative and quantitative metrics will be seen in the participation of Kariyarra in the development as informed by Grounded and KAC.
Risk #	**Risk Cause and Description**
CS2	The risk that Kariyarra people are not able to avail themselves of any procedural rights under the NT Act. In accordance with the NT Act, freehold land title is an example of a past act that extinguishes native title and in the case of Lot 51, Kennedy Street, as this is a freehold title, native title will be held to have been extinguished. Notwithstanding this, as the native title holders for the Hedland area, the Kariyarra people, will have the right for compensation for the loss of their native title over the land and are able to pursue a compensation claim for validated past acts with the State of Western Australia.

Project Phase: Development and Approvals	
	Consequently, Kariyarra people have no procedural rights to influence the SHRA Development but will have a right to compensation from the State. In the context of the impacts that Kariyarra people have had on their overall traditional land estate, while it is certain that NT Act future act processes do not apply, the impact of this development is minor and will have an insignificant impact in the broader community.
Pre Mitigation Community Detriment Ranking	**Likelihood** – Certain **Consequence** – Minor **Detriment** – Insignificant
Discussion and Suggested Mitigation and Effect	While this is the case it is notable that Grounded have commenced early engagement with the Kariyarra Aboriginal Corporation RNTBC (KAC) at a senior level to establish an appropriate relationship. Given the context it is not something that can be mitigated, except through the development of good relations, about which discussions have commenced.
Post Mitigation Community Detriment Ranking	**Likelihood** – Certain **Consequence** – Minor **Detriment** – Insignificant
Indicators, measures and metrics, sources of information	The key establishment indicators are that initial engagement with KAC Kariyarra CEO and Board occurs, that mutual agreement is reached about the nature of the relationship and on the way forward for relationship establishment. The qualitative and quantitative metrics will be seen in the participation of Kariyarra in the development as informed by Grounded and KAC.
Risk ID#	**Risk Cause and Description**
CS3 and CS4	The risk that Kariyarra people will not be able to protect their cultural heritage in accordance with the provisions of the AH Act. As can be seen in **1.4 Land Use History**, the site for the SHRA Development has been subject to significant ground disturbance through the original development of the BHP Pundulmurra Development and so it is likely that any ACH (cultural heritage sites and objects) would have been destroyed. This SIA assumes that BHP would have sought the relevant AH Act approvals when the land was first used. Notwithstanding this, as the native title holders for the Hedland area, the Kariyarra people, will have the right for compensation for the loss of their native

Project Phase: Development and Approvals	
	title over the land and are able to pursue a compensation claim for validated past acts with the State of Western Australia. Consequently, Kariyarra people have no procedural rights to influence the SHRA Development but will have a right to compensation from the State. It is assumed that such a compensation claim will include impacts to Kariyarra's cultural heritage. In the context of the impacts that have occurred on Kariyarra people's cultural heritage due to the past land use, the impact of this development is minor and will have an insignificant impact in the broader community.
Pre Mitigation Community Detriment Ranking	**Likelihood** – Certain **Consequence** – Minor **Detriment** – Insignificant
Discussion and Suggested Mitigation and Effect	It is noted that Grounded have engaged with the Kariyarra people appropriately and that these discussions are ongoing including about prior impacts on their cultural heritage.
Post Mitigation Community Detriment Ranking	**Likelihood** – Unlikely **Consequence** – Insignificant **Detriment** – Low
Indicators, measures and metrics, sources of information	The key establishment indicators are that initial engagement with KAC Kariyarra CEO and Board occurs, that mutual agreement is reached about the nature of the relationship and on the way forward for relationship establishment. The qualitative and quantitative metrics will be seen in the participation of Kariyarra in the development as informed by Grounded and KAC.

This above assessment needs to be considered with an important caveat. That is, the Kariyarra people may, quite rightly, not agree with this assessment of Community Detriment, as they are the people who have been affected.

12.2. Social cohesion, integration and identity

The level and nature of interaction and integration between SHRA and the South Hedland community will depend upon the management approach taken by Grounded and its contracted operator of the SHRA Development.

In the context of social cohesion, integration and identity, this section discusses:

- Perceptions of FIFO and DIDO Workers in the community.
- Perceptions of Aboriginal people.
- Workforce diversity and inclusion, sexual harassment and discrimination.

To a great degree, positively influencing perceptions of FIFO and DIDO workers and Aboriginal people in the South Hedland community is without Grounded's capacity and the scale and nature of the SHRA Development. Notwithstanding, the approach taken to the management of the SHRA Development can doubtless make a positive contribution to local relations.

12.2.1. Perceptions of FIFO and DIDO Workers in the Community

There are strong perceptions in the community that the SHRA Development will end up as a typical TWA camp and not provide any benefits to the South Hedland community.

The table below assesses this risk.

Table 12-2: SHRA Development and typical TWA social risk

Project Phase: Operations	
Risk ID#	**Risk Cause and Description**
CS7	The risk of the SHRA Development will end up as a typical TWA camp and not provide any benefits to the South Hedland community. If the SHRA were to revert to a fully gated community, dominated by FIFO workers, guest facilities fully provided for, high levels of physical security and with no public access, the likelihood that SHRA guests would socially integrate with the community and there would be little or no contribution to local social and economic conditions. If this were to occur, the risk that the social integration desired by both the Town and Grounded and foreshadowed by the FIFO Inquiry, would not be realised, would likely occur and the consequences of this could be major for both SHRA Development staff and guests, as well as the surrounding community. Without leadership from Grounded it is possible that this could occur and while the consequences to the community could be considered moderate, the overall detriment to the community could be considered high.
Pre Mitigation Community Detriment Ranking	**Likelihood** – Likely **Consequence** – Moderate **Detriment** – High
Discussion and Suggested	Grounded have indicated that their target market will include both resource sector contractors and subcontractors and professionals visiting South Hedland

Project Phase: Operations	
Mitigation and Effect	to provide a range of services to the private sector, the public sector (government agencies) and the community and NFP sector. If such diversity in clientele is maintained it will contribute to both the resources sector and the local economy and community in an optimal way and enhance the likelihood of the desired social integration occurring.
Post Mitigation Community Detriment Ranking	**Likelihood** – Unlikely **Consequence** – Minor **Severity** – Low
Indicators, measures and metrics, sources of information	The primary indicator here will be the proportion of non-resource sector guests over a given period and the source of such data would necessarily come from SHRA Development operational occupancy records.
Risk ID#	**Risk Cause and Description**
CS8	The risk that the end up as a typical TWA camp and closed to the South Hedland community and so not contribute to the desired social integration. If this occurred, it is likely that there and there would be little or no contribution to local social and economic conditions. Without mitigation of some form by Grounded it is likely to occur and while the consequences to the community could be considered moderate, the overall detriment to the community could be considered high.
Pre Mitigation Community Detriment Ranking	**Likelihood** – Likely **Consequence** – Moderate **Detriment** – High
Discussion and Suggested Mitigation and Effect	Discussion with stakeholders and Grounded indicated the possibility of the development of a community engagement approach that allows for controlled community access to the dining hall and landscaped areas, the proposed convenience store and other spaces as agreed from time to time. The approach should also integrate with and contribute to local community events through the consideration of an annual social investment component, at Grounded's discretion, that focusses on the social footprint of the development and the effective implementation of the SIMP. An obvious balance must be struck here so that the level of interaction and integration is optimised and on balance, be more beneficial than detrimental. It is the difference between benefit and detriment, as perceived by the local

Project Phase: Operations	
	community, that can be considered a measure of Grounded's social licence to operate. This difference is seen also as the "give back", or what is it that Grounded are giving back to the community in exchange for its social licence. If there was full and unfettered public access to the SHRA Development and uncontrolled interaction with the community, the local engagement and spend might be maximised but the likelihood of some of the risks to community health and wellbeing discussed earlier being realised would be much higher. If the appropriate balance were struck between allowing controlled community access to certain facilities and full and unfettered access, then the social integration and contribution to local social and economic conditions would be optimised. These matters are discussed further in **15.1 Striking the Right Balance** and recommendations are provided for the mitigation of this risk which ensure that this risk is unlikely to occur and so arrive at a low detriment ranking.
Post Mitigation Community Detriment Ranking	**Likelihood** – Unlikely **Consequence** – Minor **Severity** – Low
Indicators, measures and metrics, sources of information	The primary indicators here are the facilities that the public are allowed to access and the conditions upon which they are allowed to access them. Data and information about such access should be available from SHRA Development operational records.

12.2.2. Social cohesion

Social cohesion in Australia, according to the Scanlon Monash Index (SMI) of Social Cohesion is measured through the assessment of people's perceptions in five domains: Sense of Belonging, Sense of Worth, Social justice and equity, Participation (political), and Acceptance (and rejection).

The Scanlon Institute[60] adopts a definition of Social Cohesion as: "*the willingness of members of society to cooperate with each other in order to survive and prosper*".

While this SIA did not (and should not) undertake an assessment of social cohesion in South Hedland it is important to reflect on the following.

There is a clear perception in the Port and South Hedland communities that FIFO and DIDO workers do not care about the town and the community.

Some statements from the consultations are:

[60] See also: https://scanloninstitute.org.au/what-social-cohesion

"They fly in, earn the big bucks, and give nothing back."

"They are arrogant, and they think that people who live in South Hedland are lesser people."

"They don't spend any money."

While these views are not in the majority, they are common enough across the board to reflect a division between those who live in South Hedland and those who don't, as perceived by locals.

There is also, as shown throughout **9 Social Baseline**, and reported by participants in the consultation, significant difference in incomes between those who work in the resources sector and those who don't, among those that live in South Hedland and this, and FIFO / DIDO, is perceived to put pressure on the cost of living, through house rent prices, for those who don't work in the resources sector.

Again, while these are broader societal issues which are largely without the influence of Grounded, the way that the SHRA Development is managed will have an influence on the extent that such views are perpetuated in the community. Once again, if the SHRA Development were managed as a fully gated community, facilities fully provided for, high levels of physical security and with no public access, the likelihood that SHRA guests would socially integrate with the community and contribute to social cohesion would be very low.

The mitigation in relation is to this risk, as set out in Table 12-2 above, is to strike the appropriate balance between allowing controlled community access to certain facilities and full and unfettered access. If this were achieved, the SHRA Development might contribute in a modest way to social cohesion in South Hedland.

A short review of the community social media sites in Port Hedland, does reveal a highly connected but highly opinionated, community among those who live there[61]; however, when it comes to Aboriginal people, the community is very divided.

12.2.3. Perceptions of Aboriginal people.

In South Hedland, perceptions of and attitudes toward Aboriginal people do vary but there is very evident racism in the community. At the same time, there are many non-Aboriginal people, from a variety of ethnic backgrounds who work across all sectors and who understand the socioeconomic conditions that face Aboriginal people because of past dispossession and impacts to culture and country.

Kariyarra people, the Traditional Owners of Port Hedland, have been significantly impacted at least as much and perhaps more so, than their hinterland and coastal neighbours.

While the ATSI statistics shown throughout **9 Social Baseline** paint the disparity picture briefly but adequately for the purposes of this SIA, there are important statistics contained the latest Closing

[61] See Everything Hedland Face Book pages.

the Gap Report[62], that are also important to consider, not the least of which is that ATSI people are over-represented in the justice system. They make up 36% of Australia's prison population, despite comprising less than 4% of the total population.

Disaffected youth, including Aboriginal youth, that is those from lower socioeconomic backgrounds, are more likely to engage in opportunistic property crime than those that are not. The risks referred to in **11.4 Crime,** if not managed well will almost certainly ensure that negative attitudes and stereotyping of Aboriginal people in South Hedland will be perpetuated.

The risks associated with the continuing stereotyping of Aboriginal people, including Kariyarra people have been adequately covered in the mitigation responses referred to in CS1, 2, 3, 4, 5 and 6, and CHWA5 and 12.

Additionally, Grounded's Indigenous Engagement Strategy and its approaches aim to help close the gap between Indigenous and non-Indigenous Australians and are further discussed in **14 Kariyarra Community Involvement.**

12.3. Workforce Diversity and Inclusion, Sexual Harassment, Discrimination

The risk that the SHRA Village operations environment does not contribute to a betterment of workforce diversity and inclusion and will perpetuate incidence of sexual harassment and discrimination against women and other vulnerable groupings and poor mental and emotional health and wellbeing amongst the FIFO population.

The table below assess this risk.

Table 12-3: Workforce diversity, inclusion, sexual harassment and discrimination risk.

Project Phase: Operations	
Risk ID#	**Risk Cause and Description**
CS9	The risk that the SHRA Village operations environment does not contribute to a betterment of workforce diversity and inclusion and will perpetuate incidence of sexual harassment and discrimination against women and other vulnerable groupings. Similarly, that the operations of the facility do not contribute to improved mental and emotional health and wellbeing amongst the workforce, or the staff and guest population at the SHRA Development. Without the mitigations referred to previously in this SIA, particularly in relation to achieving an appropriate diversity in guest population and a balanced interaction with the community, it is likely that this risk will occur and at a minimum would have a major impact in social conditions in the facility, that could spill into the community more broadly.

[62] https://www.niaa.gov.au/sites/default/files/documents/2025-02/NIAA%20CTG%20Combined%20Report.pdf

Project Phase: Operations	
Pre Mitigation Community Detriment Ranking	**Likelihood** – Likely **Consequence** – Major **Detriment** – Extreme
Discussion and Suggested Mitigation and Effect	TWAs have historically been (white) male dominated spaces given the typical nature of the resource sector workforces and as noted above, predominantly men between the ages of 18 and 44. However, this has changed over recent decades with a significant number of women and people from diverse cultural and religious backgrounds, including Aboriginal people, working in the sector. In addition to this, it is understood that the SHRA Development will be offering accommodation to a variety of clients, not just resource sector workers, so the gender and cultural diversity of the SHRA Development is likely to be broader. In relation to sexual harassment, the 2020 Australian Human Rights Commission Report "*Respect@Work: National Inquiry into Sexual Harassment in Australian Workplaces*[63]", and in the 2022 WA Government report of the Inquiry into Sexual harassment against women in the FIFO mining industry[64], provide ample evidence of this risk and the need for considered response. It is the author's experience that the broader and more diverse the population in a community of people is, particularly in gender balance, then there will be a greater likelihood of a harmonious and respectful social environment. Consequently, it will be important for Grounded to contemplate how the development of an environment at SHRA Development that is welcoming for women and people from diverse backgrounds can be created. Grounded has made public its commitments regarding psychosocial hazards in its Vision for the SHRA Development (see Box 1-1: Grounded's SHRA Vision) and the proposed location of the SHRA Development within the urban area of South Hedland provides the opportunity to create such a desired facility that could make a significant contribution to the aims of the State Government and the Town in this regard. Mitigation responses can include design solutions such as well-lit landscaping, CCTV, access card entry to rooms and policy solutions in the SHRA Development OMP. It is important that zero tolerance policies are communicated to and acknowledged by all SHRA Development staff and guests regarding sexual harassment, gender and racial discrimination.

[63] https://humanrights.gov.au/our-work/sex-discrimination/publications/respectwork-sexual-harassment-national-inquiry-report-2020 .

[64] https://www.parliament.wa.gov.au/Parliament/commit.nsf/(EvidenceOnly)/E5F7ABD1C551FEEC4825870A0027A60E

Project Phase: Operations	
	With such mitigations, i.e. the creation of a diverse social environment that is conducive to diversity and inclusion and does not tolerate sexual harassment and discrimination, the risk might be reduced to ALARP, but it is still quite possible that this will occur; however, if managed well, the residual detriment ranking could be reduced to moderate.
Post Mitigation Community Detriment Ranking	**Likelihood** – Possible **Consequence** – Insignificant **Detriment** – Low
Indicators, measures and metrics, sources of information	Key establishment indicators would include the physical design solutions and policy solutions in the SHRA Development OMP. Metrics would include the incidence of sexual harassment and discrimination. Key sources of data and information would be Grounded's IMS, the SHRA Village Operator's records and any incidences resulting in WAPOL involvement.

13. Local Economic Participation

The estimated capital and operating expenditure indicated in **1.2 Estimated Development Costs and Economic Impact** is repeated here for convenience.

Of the total expected capital expenditure of $60 million, the direct, construction local spend for SHRA is estimated to be 15 – 20%, i.e., ~$9 – 12 million over a 12-to-18-month period. Grounded also estimate that the annual local spend during operation of SHRA Development will be $2M – $3 million per annum equating to $20M -$30M over a 10-year period.

These direct spending figures do not consider any economic multiplier effect; however, according to a recent report commissioned by the Port Hedland Industries Council (PHIC), every dollar of expenditure made in the area generated flow on expenditure of $1.97[65].

Actual economic impact therefore would be in the vicinity of $27 – $36 million for direct and indirect local construction spend and $40 –$60 million direct and indirect local spend during the anticipated 10-year operation of SHRA Development.

The achievement of beneficial economic impact arising from a development project in a community is dependent on several factors:

- the nature and scale of the project and the type and quantum of opportunities arising,
- the capacity[66] of local suppliers to provide goods and services to the project,
- the measures which the developer puts in place to ensure local economic opportunity, and
- the capacity and willingness of the local market to respond to approaches for goods, services and labour.

Economic risk to local economies includes missing out on the opportunities available, either through lack of knowledge about the opportunities and / or lack of capacity to take them up. This is most often the case in developing communities and economies and where Indigenous people are marginalised in society.

The local employment and services opportunities for SHRA Development are clear as are the time frames for construction and operations. The scale and quantum of opportunities are small in the scale of resource projects in the Pilbara; however, appropriately managed should nonetheless be able to make a moderate contribution to the South Hedland economy.

Other local economic impacts such as that associated with the entry to the market of the SHRA Development townhouses and ~250 STA beds have been covered elsewhere in this SIA, particularly in **9.8 Housing and Accommodation**, **9.10 Transient Workforce and Short-Term Accommodation** and **11.6 Housing and Accommodation**, and the cross cutting nature with economic impact noted.

[65] https://acilallen.com.au/uploads/projects/870/ACILAllen_Economic-Significance-of-Port-of-Port-Hedland_2022-2023.pdf

[66] Capacity can include the financial and technical capacity of a supplier, including HSE and quality assurance and the time and resources.

The economic impact on the local economy; however, should the development not go ahead would be the forgone opportunity for a capital investment of circa $4.5 – 6 million ($9 – $12 million direct and indirect), and $20 – 30 million ($40 –$60 million direct and indirect).

A common occurrence with project development and operations is that the local community is unaware of the economic contribution that is made to local economies. Actual economic impact can be measured through the proponent's procurement management and accounts payable system, and this can be communicated (in an aggregated way) through relevant reporting channels and community engagement.

Most economic impacts can be managed if they are known, understood and actively managed throughout a project. This would be best done through a SHRA Development Local Participation Strategy in both the CMP and OMP that is also used to understand and optimise economic contribution.

The impact areas discussed here are:

- Business contracts.
- Training and employment.

Risks associated with the above are described in tables below, given an initial Community Detriment Ranking, after which suggested mitigation measures and their likely effects are described, along with a post mitigation Community Detriment Ranking.

Where opportunities are evident, these are analysed and given an initial Community Benefit Ranking, after which suggested enhancement measures and their likely effects are described, along with a post enhancement Community Benefit Ranking.

13.1. Business Contract Opportunities

Commonly during the Development and Approval phase of a project considerable expenditure is made on the use of local meeting rooms, accommodation, vehicle hire and other local goods and services. While not insignificant the risk of this not occurring is low and in the context of the overall capital expenditure is reasonably small.

This is not included in the analysis below but has been included in the Socioeconomic and Cultural Risk Register as **LEP1**.

Typical risks associated with business contract opportunities during the construction and operations phase are that local and Aboriginal businesses miss out on business contract opportunities because:

- they are not aware of them for either phase, and / or
- the chosen project construction contractors or facility operator is not contractually bound to ensure that local and Aboriginal business are able to have the opportunity to bid for the supply of goods and services to the facility operations.

The tables below discuss each of these risks in the context of the SHRA Development.

Table 13-1: Business contract opportunity awareness risks

Project Phase: Construction and Operations	
Risk ID#	**Risk Cause and Description**
LEP2	Local and Aboriginal businesses miss out on business contract opportunities during the construction phase. The expected direct local spend during construction is ~$4.5 – $6 million over a 12-to-18-month period in the areas of accommodation, freight handling, fuel, geotechnical assessments, land survey, local vehicle, plant and equipment hire, meals, security, building materials, and the supply of concrete, gravel and fill. If local and Aboriginal businesses are not aware of these opportunities, then it is almost certain that the risk will eventuate but in the context of the broader project the impact on the local economy is expected to be minor. Without mitigation the detrimental risk is moderate.
Pre Mitigation Community Detriment Ranking	**Likelihood** – Likely **Consequence** – Minor **Detriment** – Moderate
Discussion and Suggested Mitigation and Effect	Mitigation initiatives could include the establishment of a Local Industry Participation Plan (LIPP) that includes the following: • Conducting a business opportunity briefing with the Port Hedland Chamber of Commerce[67] and its members. • Establishing a project page on the WA Industry Capability Network (ICN) ICN Gateway[68] platform. • Conducting searches of the WA Aboriginal Business Directory[69] and reaching out directly to Hedland based Aboriginal businesses, including KAC. • Engagement with Supply Nation[70]. It is noted that local and Aboriginal businesses must be able to be commercially viable and competitive in their offerings to the SHRA Development.

[67] https://www.phcci.com.au/

[68] https://gateway.icn.org.au/

[69] https://abdwa.icn.org.au/

[70] https://supplynation.org.au/

Project Phase: Construction and Operations	
	If activities such as these were undertaken, then the likelihood of local and Aboriginal businesses missing out business contract opportunities because they are not aware of them would be reduced to low.
Post Mitigation Community Detriment Ranking	**Likelihood** – Unlikely **Consequence** – Minor **Severity** – Low
Indicators, measures and metrics, sources of information	Key establishment indicators would include the number of business opportunity briefings undertaken, the establishment of arrangements with WA ICN. Metrics would include the number of participants in the briefings and number and value of local business contracts let. Information sources would include the Aboriginal Business Directory, Grounded's records. Potential partner organisations might include PHCCI, the WA ICN and Supply Nation.
Risk ID#	**Risk Cause and Description**
LEP4	Local and Aboriginal businesses miss out on business contract opportunities during the operations phase. The expected local spend during operations is 2M – $3 million per annum equating to $20M -$30M over a 10-year period in the areas of management and administration / reception; catering and cleaning; stores, grounds maintenance and gardening; trades maintenance, plumbing, electrical, carpentry and handyman services. If local and Aboriginal businesses are not aware of these opportunities, then it is almost certain that the risk will eventuate and given the quantum and time scale of the opportunity, while the consequence is moderate in broad terms, the unmitigated detrimental impact in the local economy would be high.
Pre Mitigation Community Detriment Ranking	**Likelihood** – Likely **Consequence** – Moderate **Detriment** – High
Discussion and Suggested Mitigation and Effect	Mitigation initiatives could include the establishment of a Local Industry Participation Plan (LIPP) that includes the following: • Conducting a business opportunity briefing with the Port Hedland Chamber of Commerce and its members.

Project Phase: Construction and Operations	
	• Establishing a project page on the WA Industry Capability Network (ICN) ICN Gateway platform. • Conducting searches of the WA Aboriginal Business Directory and reaching out directly to Hedland based Aboriginal businesses, including KAC. • Engagement with Supply Nation. It is noted that local and Aboriginal businesses must be able to be commercially viable and competitive in their offerings to the SHRA Development. If activities such as these were undertaken, then the likelihood of local and Aboriginal businesses missing out on business contract opportunities because they are not aware of them would be reduced to low.
Post Mitigation Community Detriment Ranking	**Likelihood** – Possible **Consequence** – Minor **Detriment** – Low
Indicators, measures and metrics, sources of information	Key establishment indicators would include the number of business opportunity briefings undertaken, the establishment of arrangements with WA ICN. Metrics would include the number of participants in the briefings and number and value of local business contracts let. Information sources would include the Aboriginal Business Directory, Grounded's records. Potential partner organisations might include PHCCI, the WA ICN and Supply Nation.

Table 13-2: Business contract opportunity – operations phase contractual risk

Project Phase: Construction and Operations	
Risk ID#	**Risk Cause and Description**
LEP6	Local and Aboriginal businesses miss out on business contract opportunities during the operations phase because the chosen SHRA Development operator is not contractually bound to ensure that local and Aboriginal business are able to have the opportunity to bid for the supply of goods and services to the facility operation. If there are not robust local economic participation provisions are included for local and Aboriginal businesses, it will be almost certain that this risk occurs and while the impact in the local economy might be moderate in

Project Phase: Construction and Operations	
	numerical terms per annum, the detrimental impact would be high overall as the operator would have no incentive to engage and contribute to the local economy.
Pre Mitigation Community Detriment Ranking	**Likelihood** – Almost Certain **Consequence** – Moderate **Detriment** – High
Discussion and Suggested Mitigation and Effect	Mitigation initiatives should include ensuring that as a part of the LIPP, in the tendering and contracting process for the facility operator that robust local economic participation provisions are included for local and Aboriginal businesses. It is noted that local and Aboriginal businesses must be able to be commercially viable and competitive in their offerings to the SHRA Development. Should contractual provisions be applied appropriately, the facility operator would actively ensure that local and Aboriginal businesses are aware of business opportunities and are able to bid for these to the extent that they wish. It would then be unlikely that opportunities would be made available and while the numerical spend would not change, the detrimental impact could be reduced to moderate.
Post Mitigation Community Detriment Ranking	**Likelihood** – Unlikely **Consequence** – Moderate **Severity** – Moderate
Indicators, measures and metrics, sources of information	Key establishment indicators would include the development and inclusion of robust local economic participation provisions are included for local and Aboriginal businesses in tenders and contracts. Information sources would include the Aboriginal Business Directory, Grounded's and the facility operators' records. Potential partner organisations might include PHCCI, the WA ICN and Supply Nation.

If the business contract opportunities were considered in opportunity terms, the following analysis could be considered.

Table 13-3: Construction phase business contract opportunities

Project Phase: Development and Approvals	
Opp ID#	**Opportunity Cause and Description**
OPP#5	That local and Aboriginal businesses are aware of opportunities to provide goods, services and labour during construction of the project and so can participate in a potential ~$9 – 12 million in direct business opportunities over a 12-to-18-month period. Without any form of enhancement there are likely to be some local and Aboriginal businesses who can compete effectively for business contract opportunities in the construction phase, although the consequence is likely to be minor and so the overall community benefit ranking would be moderate.
Pre Enhancement Community Benefit Ranking	**Likelihood** – Likely **Consequence** – Minor **Benefit** – Moderate
Discussion and Suggested Enhancement and Effect	With the mitigation strategies referred to in Table 13-1 above, it will be almost certain that with the awareness created about the opportunities, and that local and Aboriginal businesses are better able to compete effectively for business contract opportunities in the construction phase. In addition, should Grounded apply the business and procurement activities set out in its Indigenous Engagement Strategy then the opportunity for Aboriginal business participation would be significantly enhanced. These include: • Carrying out a **First Nations capability mapping program**, to identify businesses that can provide services across various capabilities, including project management, freight and logistics, procurement, environmental monitoring, health and safety, marketing and communications, engineering and construction services, recruitment and workforce solutions, training, professional services, business support, Indigenous engagement and reconciliation services. • Provide certainty for First Nations businesses to grow by demonstrating a **pipeline of work**, rather than single work packages. • Provide **regular communications / briefings** to the First Nations business sector on project opportunities, packages and initiatives (e.g., quarterly business update), clearer communications (e.g., videos) and pro-active engagement (e.g., one-on-one engagement). • Create **a best-practice procurement framework** that includes right-sized work packaging and sole sourcing to provide opportunities to engage

Project Phase: Development and Approvals	
	First Nations businesses in the procurement process and supply chain, including workshops on how to work with First Nations businesses. Grounded are also committed to achieving a volume of 3% of contracts sub-contracted to First Nations businesses. If the above enhancements were carried out successfully then it would be almost certain that local and Aboriginal businesses will be able to compete effectively for business contract opportunities in the construction phase. While the direct numerical contribution to the local economy remains moderate, the greater the proportion that is provided by local small businesses, the greater the indirect economic impact will be. This could equate to some of $27 – $36 million for direct and indirect local construction spend. The overall community benefit would be high.
Post Mitigation Community Benefit Ranking	**Likelihood** – Almost Certain **Consequence** – Moderate **Benefit** – High
Indicators, measures and metrics, sources of information	The key indicators here are the activities that Grounded undertakes in communicating with local and Aboriginal businesses through the organisations listed in Table 13-1, the implementation of the business and procurement activities in the Indigenous Engagement Strategy. The key metrics will be the number and value of contracts that are taken up by local and Aboriginal businesses. Sources of information can include Grounded's procurement and accounts, records from business briefings, inquiry about subcontract tender opportunities, actual local bids received and awarded.

Table 13-4: Operations

Project Phase: Development and Approvals	
Opp ID#	**Opportunity Cause and Description**
OPP#10	That local and Aboriginal businesses are aware of opportunities to provide goods, services and labour to project operations and so can participate in a potential $2 –$3 million per annum in business opportunities equating to $20 – $30 million over a 10-year period. Without any form of enhancement there are likely to be some local and Aboriginal businesses who can compete effectively for business contract

Project Phase: Development and Approvals	
	opportunities in the operations phase, although the consequence is likely to be minor and so the overall community benefit ranking would be moderate.
Pre Enhancement Community Benefit Ranking	**Likelihood** – Likely **Consequence** – Minor **Benefit** – Moderate
Discussion and Suggested Enhancement and Effect	With the LIPP mitigation strategies referred to in Table 13-1, 13-2 and 13-3 above, it will be almost certain that with the awareness created about the opportunities, the contractual provisions for the SHRA Development Operator and Grounded's Indigenous Engagement Strategy initiatives, that local and Aboriginal businesses are better able to compete effectively for business contract opportunities in the operations phase. If the above enhancements were carried out successfully then it would be almost certain that local and Aboriginal businesses will be able to compete effectively for business contract opportunities in the operations phase. The direct numerical contribution to the local economy per annum is moderate and over the operations period reasonably substantial. The greater the proportion of the opportunity captured by local small businesses, the greater the direct and indirect economic impact will be. This could equate to $40 – $60 million direct and indirect local spend over the operations period. The overall community benefit would be high.
Post Mitigation Community Benefit Ranking	**Likelihood** – Almost Certain **Consequence** – Moderate **Benefit** – High
Indicators, measures and metrics, sources of information	The key indicators here are the same as those for the construction phase.

13.2. Training and Employment

Commonly during the Development and Approval phase of a project considerable expenditure is made on the use of local meeting rooms, accommodation, vehicle hire and other local goods and services. It is not usual for a great deal of local employment or training opportunities to exist as the development is being driven by a small approvals team from the proponent's head office.

This is not included in the analysis below but has been included in the Socioeconomic and Cultural Risk Register as **LEP1**.

Typical risks associated with training or employment opportunities during the construction and operations phase are that local and Aboriginal people miss out these because:

- they are not aware of them for either phase, and / or
- the chosen project construction contractors or facility operator is not contractually bound to ensure that local and Aboriginal business are able to have the opportunity to bid for the supply of goods and services to the facility operations.

The tables below discuss each of these risks in the context of the SHRA Development.

Table 13-5: Construction employment risk

Project Phase: Construction and Operations	
Risk ID#	**Risk Cause and Description**
LEP3	That local and Aboriginal people miss out on employment opportunities during construction. It is understood that the construction of SHRA is expected to take approximately 12 to 18 months and that approximately, 30 people (50 at peak) will be employed in various construction roles, including carpenters, labourers, operators, electricians, plumbers, supervisory and other management administration and Perth based support staff. Assuming DA approval construction is scheduled to commence in 3Q25. It is expected that a significant proportion of these will be from Grounded's existing workforce and so the construction employment opportunities may be minimal. Notwithstanding, without any form of mitigation the risk is almost certain to occur; however, the consequence would be insignificant in terms of its broader impact to the local community and economy, so the overall detriment ranking is low.
Pre Mitigation Community Detriment Ranking	**Likelihood** – Almost Certain **Consequence** – Insignificant **Detriment** – Low
Discussion and Suggested Mitigation and Effect	It is understood that Grounded wish to employ local and Aboriginal people and to optimise their contribution to the local economy so in this regard the development and implementation of a Local Training to Employment Plan (LTEP) would assist greatly in this regard. The component of the LTEP for construction should target those local and Aboriginal people who have the existing capacity to work on the project and in the case of Aboriginal people this should include the provision of relevant

Project Phase: Construction and Operations	
	wrap around services to help them overcome the barriers to employment they might face. The timing of the expected commencement of the project lends itself well to the implementation of a short construction oriented LTEP component that leads directly into construction jobs. If this were to occur it is unlikely that the risk would arise but the impact, in terms of numbers is still likely to be minor in the local economy and so the overall detriment ranking would be low.
Post Mitigation Community Detriment Ranking	**Likelihood** – Unlikely **Consequence** – Minor **Detriment** – Low
Indicators, measures and metrics, sources of information	The key establishment indicator is the design and commencement of the LETP. Metrics should include: • The number of applicants for construction roles. • No. of people employed by role and % of the overall workforce. • Additional KPIs consistent with the LETP. Key partner organisations in a LTEP would be • Bloodwood Tree • Ashburton Aboriginal Corporation • North Regional TAFE

Table 13-6: Operations employment risk

Risk ID#	Risk Cause and Description
LEP6 and 7	That local and Aboriginal people miss out on employment opportunities during construction. The SHRA Development will require between 10 and 20 (30 at peak) full time staff and contracted services during operations in a variety of roles including: • Management and administration / reception. • Catering and cleaning. • Stores, grounds maintenance and gardening. • Trades maintenance, plumbing, electrical, carpentry and handyman services.

Risk ID#	Risk Cause and Description
	These opportunities will be available over a minimum of a ten-year period and so could offer a moderate but solid and long-term contribution to the local economy. Without mitigation the risk is almost certain to occur and so the potential detriment to the local community and economy could be considered high.
Pre Mitigation Community Detriment Ranking	**Likelihood** – Almost Certain **Consequence** – Moderate **Detriment** – High
Discussion and Suggested Mitigation and Effect	As is the case with construction, it is understood that Grounded wish to employ local and Aboriginal people and to optimise their contribution to the local economy so in this regard the development and implementation of a Local Training to Employment Plan (LTEP) would assist greatly in this regard. The component of the LTEP for operations should target those vocations referred to above and incorporate a solid training component, e.g., including traineeships or apprenticeships at a level commensurate with the workplace capacity. The LTEP should also include the provision of relevant wrap around services to help them overcome the barriers to employment they might face. The timing of the expected commencement of the project operations lends itself well to the implementation of am operations oriented LTEP component that leads directly into operations jobs. The LTEP should be augmented by tender contractual provisions for the proposed 3rd party facility operator, tailored for local and Aboriginal employment. If this were to occur it is unlikely that the risk would arise but the impact, in terms of numbers and local impact would remain moderate and the overall detriment ranking could be reduced to low.
Post Mitigation Community Detriment Ranking	**Likelihood** – Unlikely **Consequence** – Moderate **Detriment** – Low
Indicators, measures and metrics, sources of information	The indicators and measures are the same as those for construction employment.

It is for Grounded to determine the value of its investment in the LTEP; however, it is possible that greater value might be obtained for all with a focus on the operations phase. If the operations training and employment opportunities were considered in opportunity terms the following analysis could be considered.

Table 13-7: Operations employment opportunities

Project Phase: Development and Approvals	
Opp ID#	**Opportunity Cause and Description**
OPP# 11	The SHRA Development will require between 10 and 20 (30 at peak) full time staff and contracted services during operations in a variety of roles including: • Management and administration / reception. • Catering and cleaning. • Stores, grounds maintenance and gardening. • Trades maintenance, plumbing, electrical, carpentry and handyman services. These opportunities will be available over a minimum of a ten-year period and so could offer a moderate but solid and long-term contribution to the local economy. Without any enhancement, the likelihood of the local community being able to capture the opportunities within their existing capacity would be low and so the overall community benefit ranking would also be low.
Pre Enhancement Community Benefit Ranking	**Likelihood** – Unlikely **Consequence** – Moderate **Benefit** – Low
Discussion and Suggested Enhancement and Effect	With the LTEP as described in Table 13-6 above, it would be almost certain that local and Aboriginal people could capture a significant amount of the operational employment opportunities and so the overall community benefit ranking would be high.
Post Mitigation Community Benefit Ranking	**Likelihood** – Almost Certain **Consequence** – Moderate **Benefit** – High
Indicators, measures and metrics, sources of information	The indicators and measures, and the potential LTEP partners are the same as those referred to in Table 13-6.

The approach to the local and Aboriginal training and employment LTEP is discussed further in

14. Kariyarra Community Involvement

Grounded's policy statement and strategy aims to facilitate engagement between Grounded staff and First Nations people and communities and seeks to help bridge the gap between Indigenous and non-Indigenous Australians by establishing and maintaining an open and meaningful dialogue.

As indicated earlier the freehold nature of the SHRA Development site would have extinguished any remnant native title and the prior development is likely to have destroyed any tangible cultural heritage.

Recognising the above and acknowledging the Kariyarra people's status as Traditional Owners on the land where the SHRA Development is to be located, including integration of this into the design and approach taken to the development will be a significant contribution to reconciliation between Aboriginal and non-Aboriginal Australians.

Non-recognition of Kariyarra culture runs the risk of perpetuating negative perceptions of Kariyarra and Aboriginal people and culture generally and will contribute to their continued social, cultural and economic marginalisation.

In this regard, ongoing engagement with KAC will be required and it is noted that Grounded has commenced at a senior level to establish an appropriate relationship with the Kariyarra people.

The risks of not involving Kariyarra people in the SHRA Development have been covered elsewhere in this SIA but it should be noted that to for Kariyarra the opportunity to be involved in the project from the outset through operations could have a moderate to high beneficial impact on their social and economic conditions and so that of the broader South Hedland community.

In an action plan to give practical effect to Grounded's Indigenous Relations Strategy for the SHRA Development some initiatives for consideration between Grounded and KAC might include:

- Incorporating Kariyarra art and cultural themes in the design as well as appropriate naming of the SHRA Development and its facilities.
- Involving Kariyarra people in the security of the SHRA Development so that an Aboriginal presence, ideally with overt Kariyarra branding, is in the proposed 24-hour mobile security team – either through direct employment or contracting of an existing Aboriginal owned security service.
- A cultural awareness program, to be delivered to SHRA Development management and workforce by Kariyarra people, e.g., in person and / or online.
- Consideration of the development of a Reconciliation Action Plan (RAP) for Grounded as the business grows and in the first instance, commence internal reflection on this in preparation.
- Other community development initiatives to be designed in conjunction with Kariyarra people.

15. Management Planning

This section draws together the content of this SIA Report into summary statements about risk and opportunity management, which are then collated in a single summary Social Impact Management Plan (SIMP) for the consideration of Grounded.

15.1. Striking the Right Balance

Considering all that has been found through the development of this SIA and in seeking to understand the aims and aspirations of Grounded, the Town and the South Hedland community it is very clear that there needs to be the right balance struck between the need to respond to the demand for TWA and STA for the resources sector and that for the sustainable development of the community.

Additionally, there needs to be a balance struck between looking after the needs of the residents at the SHRA Development and the level of community integration and inclusion, and access to the facility.

Grounded must, in its operation of the SHRA Development, seek to optimise the beneficial and minimise the detrimental.

In addition to the mitigations and enhancement plans referred to in this document, the following should be considered:

- Should Grounded decide to allocate any portion of the SHRA Development townhouses or STA beds, this will potentially be a significant social investment in the community and should be considered as such. In this regard, understanding and measuring this might allow for a different model to be developed that more suits the South Hedland housing and accommodation context.
- In relation to the social environment in the SHRA Development it is recommended that Grounded seek not to adopt the ways of an atypical TWA facility. Rather it should aim to create a high-quality (no hi-vis) venue that offers an attractive opportunity for residents and the local community alike.
- The creation of a village like social environment should rely more on positive adult values and behaviours than the institutional controls common in the resources sector.
- Consideration should be given to the creation of a large events space for social and cultural events in collaboration with local community organisations.
- Ensure that those others who have responsibilities for social and economic development in South Hedland are involved and play their part, including the provision of resources and funding for the training and employment effort.

Achieving Grounded's aspiration to change the nature of TWA will rely on the way that the social landscape is constructed and the leadership and oversight of Grounded's Executive Management.

The remainder of this section describes, at a high level, the key elements of the recommended SIMP.

15.2. Executive Management Leadership and Oversight

It is important for Grounded to have the requisite accountability, responsibility, systems, expertise and resources in place to manage the social and economic impacts associated with the SHRA Development.

Other than noting the importance of having these things in place, this SIA does not make specific recommendations as to how they should be resourced, nor a plan for doing so, but suggests that if Grounded considers employing dedicated resources with the relevant expertise in social impact management and in Indigenous community and stakeholder engagement, then accountability for delivering outcomes must remain throughout the management structure.

Also, impact management activities take time to establish and implement and so will need to be developed over time as the SHRA Development is developed and established.

As Grounded intend to contract the operations of the SHRA Development, then the contractual arrangements must reflect the commitments that Grounded has made as well as the Vision it intends to achieve.

15.3. Policy and Procedural Review

Grounded should undertake a review of its existing procedures to align them with the effective implementation of the SIMP.

These should include:

- Aboriginal Engagement Policy and Strategy – the present Indigenous Engagement Strategy could be reviewed to align it with the style and format of Grounded's Environment Policy. The current information could be incorporated into a plan or procedure and a review undertaken against Grounded's corporate values framework.

  Consideration should be given to the development of practical and achievable procedures for Indigenous participation.

- Integrated Management System – the current IMS should be reviewed to the extent that it needs to for the management of the social risks identified in this SIA.

Grounded should consider the development of new policies, plans and procedures sufficient where this makes sense for the effective implementation of the SIMP. These might include the development of a local content policy and community and stakeholder engagement policy and associated plans.

15.4. Local Communications Strategy

Critical to the success of the SHRA Development will be ongoing engagement with the local community through participation in existing fora and through the normal contemporary communications platforms.

The prime purpose of this is to ensure a two-way flow of information and allow for adaptive management of community impacts as they arise. A local communications strategy should be incorporated into the project CMP and OMP to guide ongoing engagement with local stakeholders. The communication strategy may make provision for regular updates about the development and include:

- the use of Grounded's existing social media;
- the establishment of a 1800 inquiry line and webpage-based email inquiry line; and,
- the use of local print and social media where required.

15.5. Housing and Accommodation – TWA and STA

In the SIA there is considerable discussion about housing and accommodation including the contemplation of prioritising a proportion of the accommodation units and townhouses at discounted rates for Essential Service Workers (non-resource sector) workers including the NFP sector.

At the same time, contemplating a medium to long term transition to permanent, open market, residential accommodation and the preparation of a staging plan or transitional strategy to guide this transition including timeframes.

As indicated in this SIA, this should be considered as a part of Grounded's social investment program as it could have a significantly positive impact in the community and should be considered as such and appropriately measured.

Further recommendations about this are shown below.

15.6. Security Strategy

Given the location and nature of the SHRA Development and the security concerns raised in the preparation of the SIA it is recommended that a within the CMP and OMP, that a security strategy is prepared to optimise social integration with the community of South Hedland while effectively defending against opportunistic crimes against property.

It is also recommended that involving Kariyarra people in the security of the SHRA Development so that an Aboriginal presence, ideally with overt Kariyarra branding, is in the proposed 24-hour mobile security team – either through direct employment or contracting of an existing Aboriginal owned security service.

15.7. Community Engagement Strategy

Recommendations for a Community Engagement Strategy within the OMP that:

- Allows for potential community access to:
    - the Dining Hall and landscaped area~~,~~
    - the Convenience Store and
    - other spaces as agreed from time to time.
- Integrates with and contributes to local community events.
- Allows for appropriate the use of local social and health infrastructure by development occupants.

Comments are previously made in **15.1 Striking the Right Balance** regarding the development of a social landscape conducive to achieving the Vision for the SHRA Development.

It is also recommended that Grounded consider an annual social investment component, at Grounded's discretion, that focusses on the social footprint of the development and the effective implementation of the SIMP for the purpose of contributing to local culture and society. The approach to impact management does not need to be overly complex or expensive; however, it is very important that any social investments embarked upon should consider best practice, contemporary social impact principle and theory.

Put simply,

- A clear definition of the problem that is trying to be solved is made and how doing what is proposed will make change.
- That all the required inputs and outputs required are stated in a logical framework that includes the background conditions, others involved that need to play their part.
- That measures are agreed with at the outset, including what data is required to fulfill the measurement and who is going to collect / provide / analyse the data collected, and what qualitative and quantitative methods are to be used.
- That the costs of measurement, monitoring and review are built into the program at the beginning.
- Whether, if successful, the social change program invested in could be scaled up to effect broader societal change.
- Who the other stakeholders that are involved and whether there is a collective approach being taken that it based on a shared vision, with agreed contributions and continued reinforcing actions, over a defined period.
- That there is a formal process for reporting and review that is aligned with budget cycles and Government agency (if contributing) budgeting and reporting periods.
- That formal social investment contracts or agreements are in place with all contributing parties and implementing partners before any activities commence.

It is recommended that if Grounded embark on any social investments that they do so through experienced and qualified implementing partners.

15.8. Local Economic Participation Plan

The SIA results indicate that a Local Economic Participation Plan be prepared that to ensure that local businesses and people are aware of opportunities for business contracts and employment. This should include:

- A Local Industry Participation Plan (LIPP) – that targets local and Aboriginal businesses for business contract opportunities during the construction and operations phases.
- A Local Training to Employment Plan (LTEP) – that targets local and Aboriginal people for employment during construction and training to employment for operations.

These are described at a high level below.

15.8.1. Local Industry Participation Plan

The Local Industry Participation Plan (LIPP) that should include the following:

- Conducting a business opportunity briefing with the Port Hedland Chamber of Commerce and its members.
- Establishing a project page on the WA Industry Capability Network (ICN) ICN Gateway platform.
- Conducting searches of the WA Aboriginal Business Directory and reaching out directly to Hedland based Aboriginal businesses, including KAC.
- Engagement with Supply Nation.
- Contractual provisions for the maximisation of local and Aboriginal subcontractors for the 3rd party SHRA Development operations contractor.

In addition to the above, the LIPP should also apply the business and procurement elements of Grounded's Indigenous Engagement Strategy.

15.8.2. Local Training to Employment Plan

The Local Training to Employment Plan (LTEP) should include:

- Targeting the available construction employment opportunities with local and Aboriginal people with the existing skills suitable for the work, or that need limited upskilling and recertification.
- Targeting the operational employment opportunity vocations for local and Aboriginal people in a program that includes a solid training component, e.g., including traineeships or apprenticeships at a level commensurate with the workplace capacity.
- The provision of relevant wrap around services to help local and Aboriginal people overcome the barriers to employment they might face.
- The provision of available Australian and WA Government funding.
- Be augmented by tender contractual provisions for the proposed 3rd party facility operator, tailored for local and Aboriginal employment

The LTEP should be developed in collaboration with Bloodwood Tree Aboriginal Corporation, Ashburton Aboriginal Corporation and NR TAFE, and in consultation with KAC.

15.9. Traffic Management Plan

The SIA results indicate that a TMP, consistent with the TIS undertaken, to minimise construction and operations traffic on Kennedy and Parker Streets between the hours of 0730 – 0830hrs and 1430 – 1530hrs and always minimises construction and operations traffic on Coppin Place and Stanley Street.

15.10. Monitoring and Evaluation

The approach to monitoring and evaluation for this SIMP should include:

- The collation and review of all the measures and metrics contained in the Socioeconomic Risk and Opportunity Registers.
- Mapping these to each of the strategies and plans involved.
- Articulating further how monitoring, evaluation review is to be undertaken, e.g., identifying what impacts are to be measured and how.
- Allowing for changes in practice to occur in response to new information through adaptive impact management.
- Committing to ensuring that there are sufficient resources in place to implement the SIMP and the commitments therein including the monitoring and evaluation.
- The establishment of a sensible and practical reporting regime.

15.11. Social Impact Management Plan

The Table 15-1 overleaf sets out a high-level summary of the SIMP elements, provides a brief description for each.

In addition, summary descriptions of each risk and opportunity, pre and post mitigation and enhancement strategies are provided in Appendix A and Appendix B respectively.

Table 15-1: Summary Social Impact Management Plan (SIMP)

#	Social Impact Management Plan element	Management Strategy / Plan / Commitment Description
1	Executive Management Leadership and Oversight	Grounded to have the requisite policy, leadership, accountability, responsibility, systems, expertise and resources in place to manage the social and economic impacts associated with the SHRA Development.
2	Policy and procedural review.	Review of existing Grounded procedures: • Aboriginal Engagement Policy and Strategy • Integrated Management System Development of new or revision of existing policies and procedures sufficient for the effective implementation of the SIMP.
3	Local Communications Strategy	Within the Construction Management Plan and Operational Management Plan, consider the preparation of a communication strategy to guide ongoing engagement with local stakeholders. The communication strategy may make provision for regular updates about the development and include: • the use of Grounded's existing social media; • the establishment of a 1800 inquiry line and webpage-based email inquiry line; and, • the use of local print and social media where required.
4	The provision of dedicated non-resource sector short-	Contemplation of prioritising a proportion of the accommodation units and townhouses at discounted rates for Essential Service Workers (non-resource sector) workers including the NFP sector, as a part of Grounded's social investment program.

#	Social Impact Management Plan element	Management Strategy / Plan / Commitment Description
	and long-term accommodation.	
5	A medium to long term transition to permanent, open market, residential accommodation.	Preparation of a staging plan or transitional strategy to guide the transition from TWA / STA to permanent residential development including timeframes.
6	Kariyarra Relationship	Engagement with the Kariyarra Aboriginal Corporation (KAC) in recognition of Kariyarra people as the Traditional Aboriginal Owners of the land on which South Hedland is located and to create opportunities for Kariyarra's socio-economic and cultural participation in the development.
7	Security Strategy	Within the Construction Management Plan and Operational Management Plan, consider the preparation of a Security Strategy to optimise social integration with the community of South Hedland while effectively defending against opportunistic crimes against property.
8	Community Engagement Strategy	Within the Operational Management Plan, consider the preparation and implementation of a Community Engagement strategy that: • Allows for potential community access to: o the Dining Hall and landscaped area~~,~~ o the Convenience Store and o other spaces as agreed from time to time.

#	Social Impact Management Plan element	Management Strategy / Plan / Commitment Description
		• Integrates with and contributes to local community events. • Allows for appropriate the use of local social and health infrastructure by development occupants. • Consideration of an annual social investment component, at Grounded's discretion, that focusses on the social footprint of the development and the effective implementation of the SIMP.
9	Local Economic Participation Strategy	Within the Construction Management Plan and Operational Management Plan, consider the preparation of a Local Economic Participation Strategy that incorporates the following elements: • A Local Industry Participation Plan (LIPP) • A Local Training to Employment Plan (LETP)
10	Traffic Management Plan (TMP)	Development of a TMP, in accordance with an expected development condition if approved, that: • minimises construction and operations traffic on Kennedy and Parker Streets between the hours of 0730 – 0830hrs and 1430 – 1530hrs, and • minimises construction and operations traffic on Coppin Place and Stanley Street at all times.
11	Monitoring and Evaluation	Within the Operational Management Plan, consider the establishment of monitoring and evaluation plan for the SIMP that provides metrics that are useful to both Grounded and the Town and that allows for adaptive management of impact strategies as the development progresses.

1 INTRODUCTION

This Engineering Design Report (EDR) is issued as a deliverable to Grounded in response to the request for a high-level engineering assessment and concept infrastructure for the new worker accommodation development proposed at the corner of Kennedy Street and Parker Street, South Hedland, (extract below).

Figure 1.1 - District Location Plan

Figure 1.2 - Site Location Plan

The proposed development is for a new village to support the need for accommodation facilities at and around the region. Grounded/SHRA are providing this facility with an aim of offering accommodation to various companies.

The proposed site plan is based on 252 PAX for the new worker accommodation development part and 45 PAX for the townhouse part, providing a total of 297 PAX for the lot.

Most of the buildings will be modular and transported up to the site. The site consists of a dining hall building complex, maintenance shed, recreation building, administration facilities, plant spaces, laundry units and accommodation units, generally 4-person modules. The gym and stand-alone townhouse buildings will be built in-situ.

This EDR is issued as a deliverable to Grounded and aims to outline the major electrical and hydraulic aspects required to support the new development as defined.

Forth Consulting has not carried out any site visits and has been provided with limited as-constructed information. Any design statements made in this report are based on the information we have been provided, and is subject to a site visit, a thorough services infrastructure site inspection and verification. Forth bares no responsibility for any design statements which are based upon the existing services and conditions of the existing site.

2 ELECTRICAL, COMMUNICATIONS AND DRY FIRE SYSTEMS

2.1 BASIS OF DESIGN AND REFERENCE DOCUMENTS

The basis of design is as per the documents listed below:

- AS/NZS 3000 Wiring Rules
- AS/NZS3008 Low Voltage Cabling
- AS/NZS3080 Telecommunications
- AS/NZS1768 Lightning
- AS/NZS1680 General Lighting
- WA Electrical Requirements
- Relevant local authority regulations
- Horizon power requirements
- NCC 2022
- CADDS Group proposed overall layout A1.01 Rev B Planning Approval.

2.2 SCOPE OVERVIEW

2.2.1 EXISTING ARRANGEMNT

2.2.1.1 Power Supply:

Horizon Power (HP) is the supply authority for this area.

At present, the lot is relatively clear and does not appear to have any easements or encumbrances related to the power and communications services, within the lot boundary. There is however an existing underground LV cable that appears to run from the Parker St – Kennedy St corner, to the centre of the lot as well as a LV pillar located at the corner of Lots 5954 and 2940 on Kennedy St (see BYDA extract below). The HP pillar is a mini pillar as evidenced in the HP as-constructed design drawing below.

We note that based on the information available, there is minimal existing electrical infrastructure on the lot. Furthermore, we believe that there is no existing electrical and communications infrastructure within the lot that can be reused.

The lot is also bounded by HV underground cabling along the Kennedy St, Coppin Place and Stanley St lot boundaries. There are 2-off kiosk type substations located on the corners of the Lot 2940. Whilst these do not supply our lot, expect that HP may rationalise these substations as part of any power supply upgrade request for our Lot 5954.

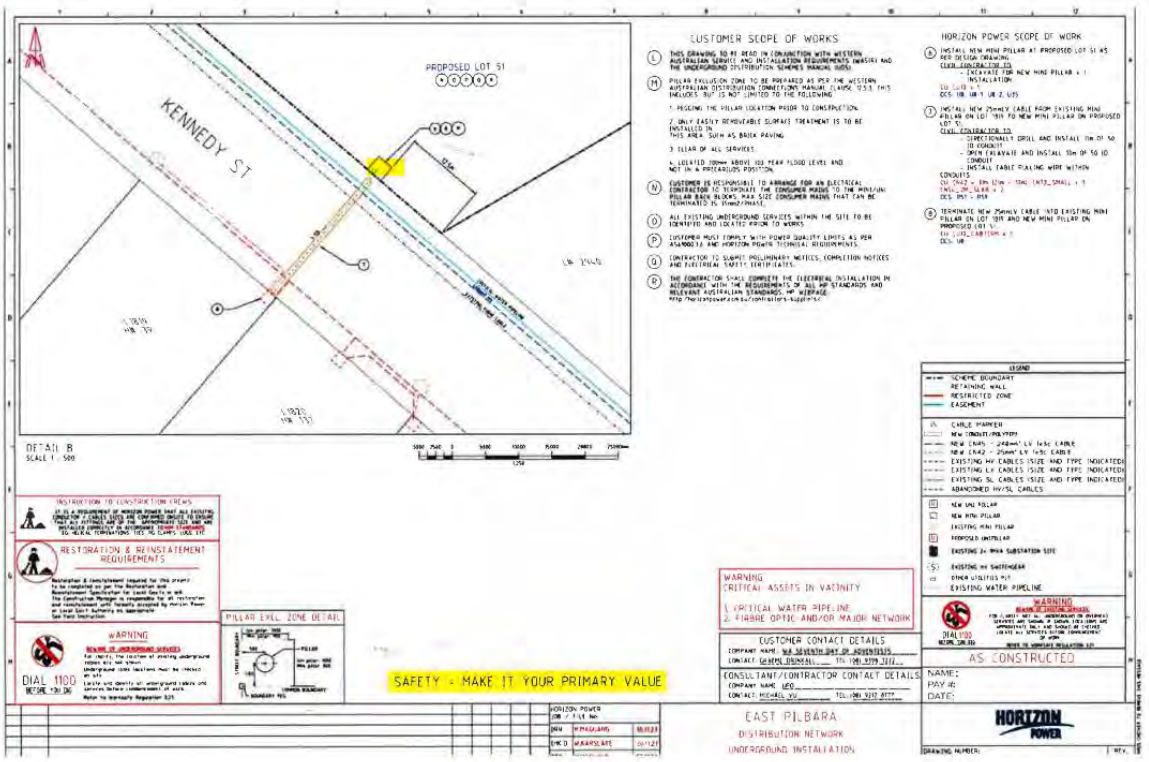

Figure 2. Design Drawing (subject to change).

Figure 2.1 – Existing Electrical Point of Connection

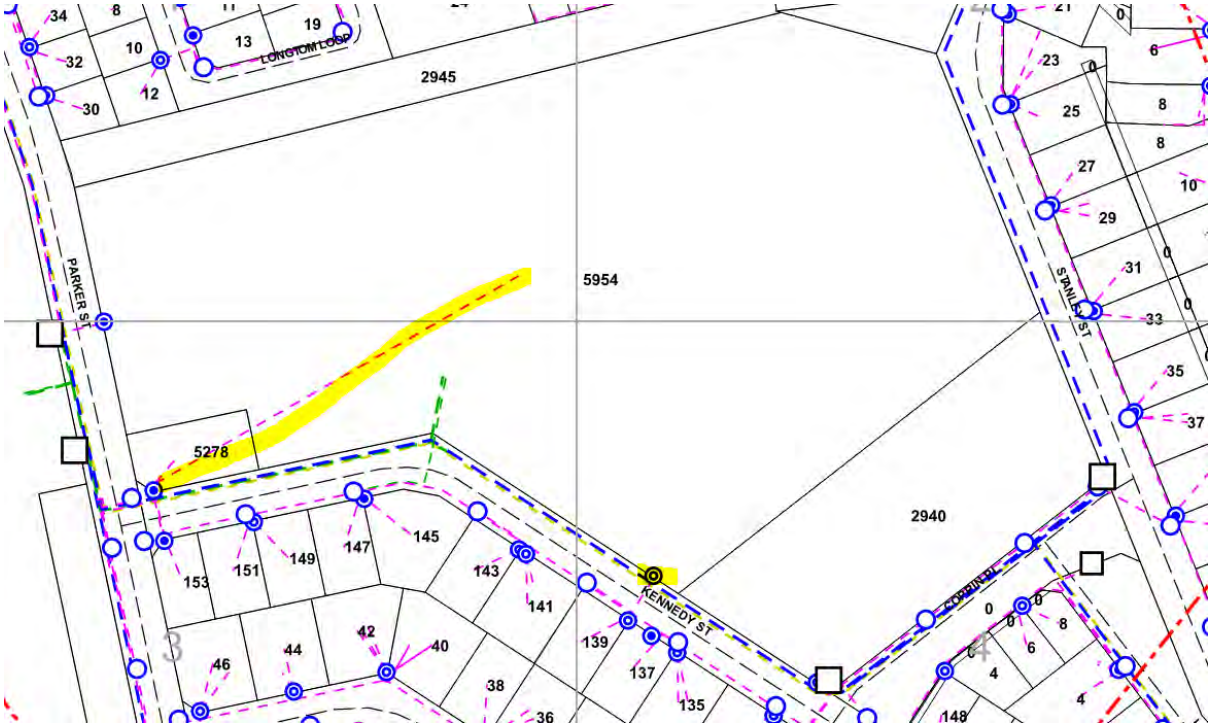

Figure 2.2 – Existing Electrical Cables in the Lot

Figure 2.3 – Existing Communications Carrier Services (Note: existing buildings no longer on site).

2.2.2 PROPOSED ARRANGEMENT

2.2.2.1 Maximum Demand:

The proposed site plan is based (refer to Figure 1.2) on 252 PAX for the new worker accommodation development part and 45 PAX for the townhouse part, providing a total of 297 PAX for the lot.

We propose a after diversified maximum demand value for the village to be based on similar villages completed in the Pilbara and central Australia. The following table provides some examples of load allocations based on built accommodation villages and projects that FORTH are currently working on (e.g. Mesa A Village).

Village	Number of people	Level of amenity and basis	Connected load	ADMD per person
Mesa A RTIO	890PAX village, This includes the new additional 332PAX (Substation 5).	Accommodation units are based on single storey, 4-man units (558PAX are in this form), 332PAX in the form of 6-off 50PAX to 60PAX each, 2 storey accommodation buildings and separate central facilities and amenities. The level of amenity is medium level. Note that apart from the new buildings connected to Substation 5, all other substation usage data is real time peak current measurement on site.	3637kVA	4.1kVA
Oz minerals Living Hub – West Musgrave WA	400PAX	Relatively high, used as an operations village and is more of a permanent village. Accommodation units are based on single storey, 3-man units. Note that the connected load includes both accommodation and central	1800kVA	4.5kVA

		facilities but does not include a large dome structure and a local airport load allowance.		
Hope Downs HD4 Camp – RTIO – Pilbara WA	1000PAX	Initially a construction village and then sized down to an operations village. Accommodation units are based on single storey 4-man units. Note that the connected load includes both accommodation and central facilities. Usage data is real time peak current measurement on site.	4000kVA	4kVA
Windawarri RTIO – Tom Price WA	200PAX	Accommodation units are based on single storey, 3-man units. Note that the central facilities are supplied from a separate transformer.	1000kVA	5kVA

Table 2.1 – Load Assessment Basis

Based on the above, we anticipate a typical load allocation per person of 4kVA and thus, an After Diversified Max Demand (ADMD) for the village 4-PAX module part (252PAX) is 1008kVA (i.e. 1400A per phase).

For the Townhouse part, allowing for 15 townhouses, AS/NZS3000 Table C1 is used to calculate the ADMD for this part. Using Table C1 (part extract below), a calculated ADMD for this Townhouse part is 110kVA (ie 150A per phase).

COPYRIGHT

TABLE C1

MAXIMUM DEMAND—SINGLE AND MULTIPLE DOMESTIC ELECTRICAL INSTALLATIONS

1	2	3	4	5
Load group	Single domestic electrical installation or individual living unit per phase[1]	Blocks of living units[1, 2, 3]		
		2 to 5 living units per phase	6 to 20 living units per phase	21 or more living units per phase
		Loading associated with individual units		
(a) Lighting				
(i) Lighting except (ii) and load group (h) below[4, 6]	3 A for 1 to 20 points + 2 A for each additional 20 points or part thereof	6 A	5 A + 0.25 A per living unit	0.5 A per living unit
(ii) Outdoor lighting exceeding a total of 1000 W[6, 7]	75% connected load	No assessment for the purpose of maximum demand		
(b) (i) Socket-outlets not exceeding 10 A[5, 8]. Permanently connected electrical equipment not exceeding 10 A and not included in other load groups[9]	10 A for 1 to 20 points + 5 A for each additional 20 points or part thereof	10 A + 5 A per living unit	15 A + 3.75 A per living unit	50 A + 1.9 A per living unit
(ii) Where the electrical installation includes one or more 15 A socket-outlets, other than socket-outlets provided to supply electrical equipment set out in load groups (c), (d), (e), (f), (g) and (l)[8, 10]	10 A			
(iii) Where the electrical installation includes one or more 20 A socket-outlets other than socket-outlets provided to supply electrical equipment set out in load groups (c), (d), (e), (f), (g) and (l)[8, 10]	15 A			

(*continued*)

Figure 2.4 – AS/NZS3000 Appendix C1 Table Extract

When we combine both the modular 4PAX ADMD and the Townhouse ADMD, we get 1118kVA (i.e. 1557A per phase).

2.2.2.2 Power Supply:

Based on the preliminary layout, we propose that a new HP sole use substation be provided on the site, along Kennedy St, near the existing pump station lot. Refer to the Appendix A, drawing SKE01.

The substation will be an external kiosk type district substation as per HP substation design drawing group G3-06 (see extracts below).

This selection includes 2-off transformers, either 2-off 630kVA units or 2-off 1MVA units. We anticipate that this site will require 2-off 630kVA transformers, based on the kiosk being a sole use substation and our ADMD being 1118kVA calculated. The HV voltage levels are not yet known, and these will be confirmed with Horizon Power prior to any design and construction works.

The final substation arrangement is dependent on HP and their network requirements as well as the final customer agreed/preferred position for the substation.

The site main switchboard will be mounted adjacent to the substation and will contain one authority meter. The entire site will be metered at this one point via the authority.

2.2.2.3 Metering and LV Distribution:

A site main switchboard (SMSB) shall contain one authority NMI digital remote meter, for the entire lot. Private NMI embedded meters will be provided for all other loads which require individual metering. At present, the townhouse DB's are configured to accommodate individual private NMI meters to allow for a strata entity or the like, to measure, collate and bill any energy usage.

Refer to Appendix A, drawing SKE03 for the schematic LV distribution, indicating authority and private NMI metering arrangements.

The SMSB contains submain switches for individual protection of each building distribution board. The Dining Hall building may incorporate another downstream DB, however for this level of analysis, first level distribution boards are shown. Each building DB will contain power, lighting and mechanical plant chassis in accordance with the NCC.

For the accommodation areas, not including the townhouse areas, sub-area DB's are provided. These sub-area DB's are located to suit the optimal cabling routes. Submain cabling to each accommodation building (assuming a 4-PAX building unit) shall be run from the sub-area DB to a load centre termination point located on the building modular unit. Internal power, lighting and communications infrastructure within the building is pre-wired by the modular building supplier/manufacturer.

For the townhouse accommodation units, the relevant sub-area DB shall contain main switches for submains which will run to load centres within each townhouse.

Common site services shall be run from the nearest DB's.

2.2.2.4 External Lighting:

External lighting shall be provided by a combination of the following:

1. Building mounted LED bulkhead type luminaires.
2. Bollard type solar powered luminaires for selected paths.

Figure 2.5 – Solar Bollard Example

3. Pole mounted luminaires with LED lamp sources based on solar powered poles for paths, vehicular access and car parks.

Figure 2.6 – Solar Pole Luminaire Example

The bulkhead building mounted luminaires shall be wired from the nearest logical DB and be provided with automatic lighting control via a time clock and PE cell.

The use of solar powered pole lights will eliminate the need for any cabling and conduits.

Solar pole lights are often used in applications such as this, with heights typically selected to suit amenity, glare impact, lighting uniformity, average illuminance levels as well as cost. Common standard manufacturer wattages are about 30W (3600lumens), utilising LED lamp sources. Poles can be provided with the swing-hinged system, to allow maintenance and access to the fitting and PV panel. At times of bad weather, where perhaps it is overcast for some time, the lights can operate up to 3 days continuous, before the batteries require charging. The luminaires are configured to provide dusk to dawn continual lighting, subject to battery charge levels. Whilst these types of poles are relatively new, manufacturer literature states that the design life for the pole luminaires and the associated

components is 20+ years. As with hard wired poles, there will be a need for the pole base to be designed to suit the particular ground and region.

The final arrangement and combination of solar bollards and pole lights shall depend on the final design and aesthetic intentions throughout the village.

2.2.2.5 Communications Infrastructure:

A main communications hub will be established within the administration building, along Kennedy Street. This hub would contain the site carrier transition infrastructure, customer owned racks and ICT head-end (refer to Appendix A, SKE02).

The site network will likely consist of a star topology with fibre optic cabling emanating from this site main hub and terminating at each building/facility.

For the accommodation units, each building will contain a communications termination box, to facilitate the backbone cabling terminations. Typically, the site backbone fibre optic cable will terminate at a collector termination point at each laundry building, and from this point, a dedicated (star configuration) communications cabling service will be run from the collector at the laundries to each building termination point within a defined cluster.

All communications cabling within the accommodation buildings will be provided by the modular building supplier/manufacturer.

The townhouses will be provided with a communications termination frame within a dedicated cupboard. At this location, OF termination frames will provide OF backbone cabling to each townhouse termination point within the townhouse. This is not unlike a traditional NBN customer network arrangement for strata accommodation.

All the other buildings such as the Dining Hall, maintenance shed, recreation building, gym & transit, etc, will all contain a communications room/rack, in which the fibre optic backbone will terminate. Internal building communications will be provided using internal Cat 6 UTP cabling, terminating at RJ45 outlets as required.

The final topography of the communications backbone cabling will depend on the general site distribution plan for power and water but will also be determined by the building configurations and any operator ICT requirements.

2.2.2.6 Dry Fire:

Fire detection and alarm systems shall be provided throughout the site.

Typically, each accommodation unit will contain fire detectors, provided by the modular building supplier/manufacturer, which are looped together such that if one detector is alarmed, all are alarmed. All the detectors are therefore cabled to a singular termination frame, not unlike the communications cabling. This termination frame is located externally, normally next to the communications termination frame.

Subject to the DTS requirements of the NCC applicable, the townhouses may only be required to contain a stand-alone smoke alarm system, to AS3786, for each townhouse. This is subject to a fire engineering assessment.

All the other buildings such as the Dining Hall, maintenance shed, recreation building, gym & transit, etc, will contain AS1670 fire detection and alarm systems, complete with detectors and a sub-fire indicator panel (SIP). The SIP's will connect to the respective communications racks in each of these buildings.

The site wide communications system fibre cabling will contain cores to support the communications network and the fire detection and alarm network. Thus, each SIP will be connected back to ta central main fire indicator panel (FIP) in the administration building.

3 HYDRAULICS AND WET FIRE

3.1 BASIS OF DESIGN AND REFERENCE DOCUMENTS

The basis of the designs is as per the client requirements, and to align / interface where possible with the existing Authority supply connections available to the site.

The below relevant standards apply to the information provided within this report, with the latest version as referenced in the National Construction Code applicable:

- AS 1221.1 Fire hose reels.
- AS/NZS 1260 PVC-U pipes and fittings for drain, waste, and vent application.
- AS/NZS 1254 PVC-U pipes and fittings for stormwater and surface water application.
- AS 1357.2 Valves primarily for use in warm and hot water systems – Part 2: Control valves.
- AS 2032 Installation of UPVC pipe systems.
- AS 2033 Installation of Polyethylene (PE) pipe systems.
- AS2304 Water Storage tanks for Fire Protection Systems
- AS 2419.1 Fire hydrant installation – System design, installation, and commissioning.
- AS 2419.2 Fire hydrant installation – Fire hydrant valves.
- AS 2419.3 Fire hydrant installation – Fire brigade booster connections.
- AS 2441 Installation of fire hose reels.
- AS 2845.2 Water supply – Backflow prevention devices – Part 2: Air gaps and break tanks.
- AS 2941 Fixed fire protection installations – Pump set systems.
- AS/NZS 3500.1 Plumbing and drainage Part 1: Water services.
- AS/NZS 3500.2 Plumbing and drainage Part 2: Sanitary plumbing and drainage.
- AS/NZS 3500.3 Plumbing and drainage Part 3: Stormwater drainage.
- AS/NZS 3500.4 Plumbing and drainage Part 4: Heated water services.
- AS 3855 Suitability of plumbing and water distribution systems products for contact with potable water.
- AS/NZS 4130 Polyethylene (PE) pipes for pressure applications.
- AS 4809 Copper pipe and fittings – Installation and commissioning.
- Water Corporation Rules and Regulations
- WA Plumbers Licensing Board Rules and Regulations
- ATCO Gas Rules and Regulations

- Building Code of Australia, NCC2022
- OH&S regulations.

3.2 EXISTING ARRANGEMENT

Domestic cold-water service:

The domestic cold-water supply to the site is currently connected to the Kennedy St 100dia asbestos cement (AC) Water Corporation main. The supply main in Kennedy St is positioned on the southern side of the street. There is a supply connection serving the project site, however the size is unknown.

There is a 250dia Polyethylene (PE) water main located in Parker St, however there is no interface between the project site and Parker St due to Lot 50 being located to the east of Parker St.

The South Hedland water supply is fed from the 2273kL elevated water tank located directly to the north of the project site. The tank water level is 46.2, which is approximately 36m above the site FGL. As such, it's anticipated that the water supply main will have in the vicinity of 300kPa supplying the.

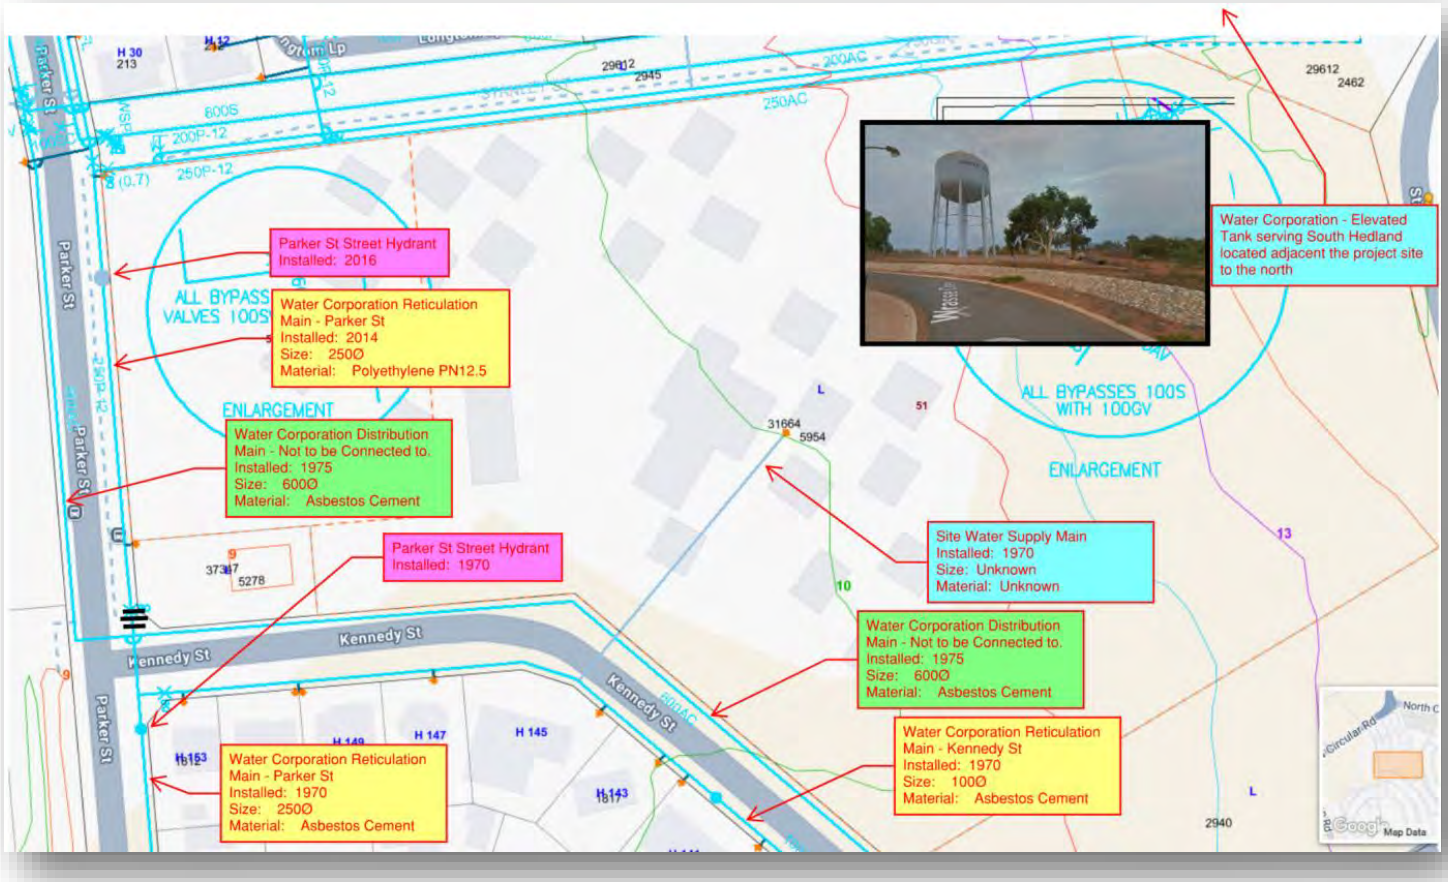

Figure 3.1 - Existing Water Corporation Potable Supply Network

Property sewer drainage:

The sewer infrastructure serving the site is located to the south-west corner of the property on Kennedy St, adjacent to the Water Corporation sewer pumpstation site. The gravity sewer connection to the site is 225dia PVC and has a capacity of 3250 Fixture units (AS3500.2:2018 Table 3.3.1), and was the point of connection for the previous accommodation village located on this site.

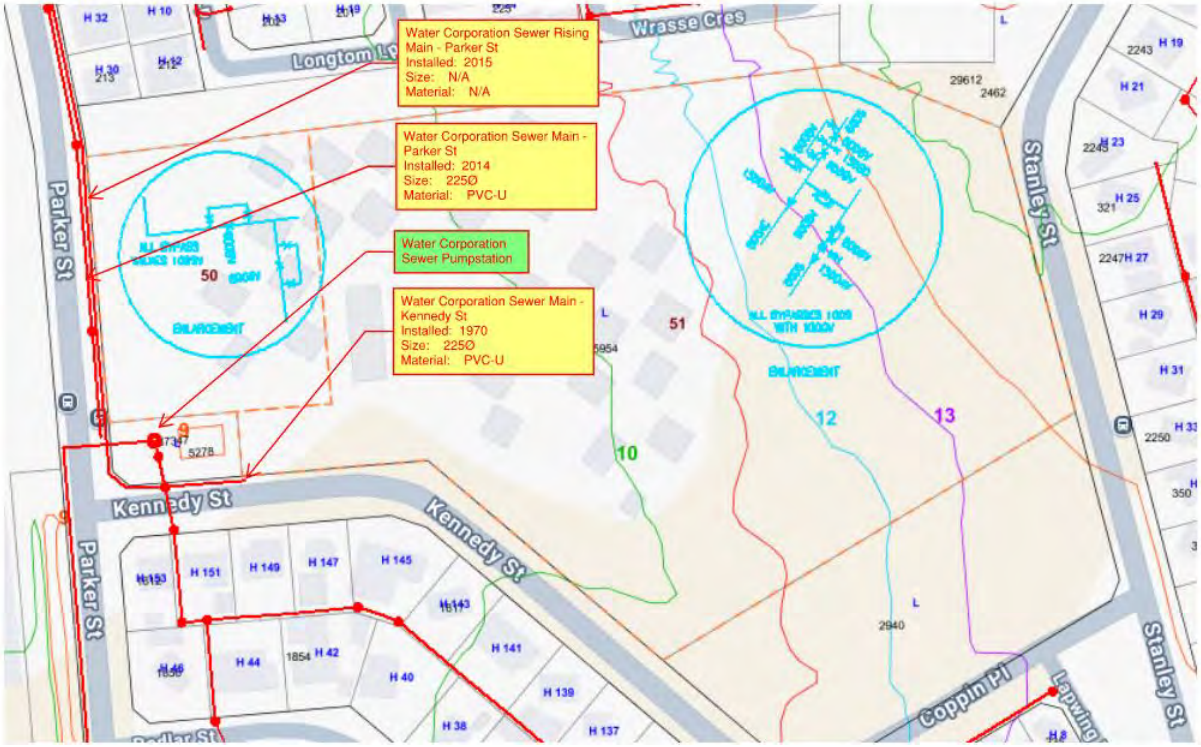

Figure 3.2 - Existing Water Corporation Sewer Network

3.3 PROPOSED ARRANGEMENT

Domestic cold-water service:

The domestic cold-water system shall have sufficient capacity to satisfy probable simultaneous flows extending over the peak demand periods.

Calculations have been undertaken based on AS3500.1 which have been provided below (Refer to Figure .1 and 3.2). These calculations indicate that the site probable simultaneous flow rate (PSFR) is 5.38 L/s or 322 L/min.

Project Name SHRA Accommodation Village Grounded DCP Date 27/02/2025

	Spa	0	L/s
	Pool	0	L/s
	Cooling Tower		L/s
	Others		L/s
	SUM	0	L/s

Total water demand	5.381140951	L/s
	322.8684571	L/min

Figure 3.4 - Probable Simultaneous Flow Rate

Based on the above calculations, we have allowed for an 80mm restricted Authority supply connection capable of 340L/min (Refer to Figure 3.3) made on Kennedy St to the existing 100mm asbestos cement main. The headworks associated with this supply connection are approximately $245,000 based on 24-25 rates. Minor additional costs will be applied for meter, installation and activation fee.

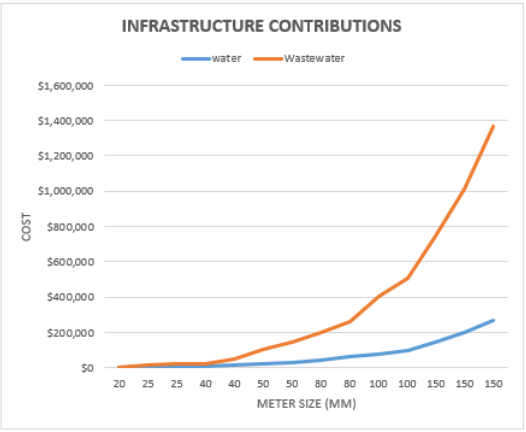

Figure 3.5 - Water Corporation Headworks Estimate

It is proposed for the incoming water supply to feed into a domestic water storage tank. While no storage requirement has been stipulated, we would recommend a domestic water storage tank capable of holding 24 hours of water demand. The below calculation (Figure 3.4) identifies that the anticipated daily demand is 89kL. We would recommend a 100kL domestic water storage tank. This tank will act as a buffer and cater for peak demand, given the supply agreement with the supply Authority has a limit of 100kL per day.

The PSFR and daily consumption calculations don't make any allowance for irrigation water demand. We would recommend a separate storage tank be provided which can be filled during low water consumption periods (overnight and midday), as this will ensure an increased Authority connection can be avoided. Allowance for a 50kL irrigation water tank is recommended to provide storage to suit the 1kL daily draw-off allowance for irrigation purposes.

Typical water consumption per person per day	300 L		Typical Mine Camp Allowance
Dwelling Type	No of people	No of dwelling	Total Water Consumption per day (L)
One bedroom/ 1 bathroom	1	252	75600
Two bedroom/ 1 bathroom	2	0	0
Two bedroom/ 2 bathroom	3	15	13500
Three bedroom/ 2 bathroom	4	0	0
Three bedroom/ 3 bathroom	4	0	0
Penthouse	4	0	0
Townhouse	4	0	0
TOTAL			89100

Figure 3.6 - Anticipated Daily Consumption

Downstream of the domestic potable water tank, a variable speed multi-stage pressure boosting pump set is recommended for delivery of potable water throughout the site. It is proposed to reticulate via a 75Ø HDPE-CR "Ring Main". Water services are to be reticulated in a common services trench feeding into the accommodation and central facility buildings, typically provided with a 20mm connection (or larger as necessary to suit demand) complete with isolation for building shut-down.

Across the network, the minimum working pressure at the furthermost or most disadvantaged fixture or outlet shall not be less than 250 kPa (25 m head). The maximum pressure to all buildings shall be 450 kPa (45 m head). Provision shall be made by way of pressure limiting valves, to ensure that the maximum static pressure at any outlet, other than a fire service outlet, does not exceed 500 kPa (50 m head).

The maximum water velocity in piping is not to exceed 1.5 m/s.

Main water control valves in buildings must be in readily accessible locations where they will be noticed such as under kitchen sinks or laundry troughs, not concealed in ducts. Acoustically insulate pipes in areas where noise will be a problem and acoustically isolate pipes where vibration or structure borne transmission will be a source.

Townhouse domestic cold-water service:

Water supply to the townhouses can be provided from the Stanley St water main (Refer to Appendix C). Each lot can be supplied with a 20mm domestic water supply connection. Fees and charges will be applicable for the extension works, and associated water meter and connection charges. In addition, headworks of approximately $7,000 per dwelling will be applied. This connection can either be undertaken now as part of the development, or at a later date as part of the subdivision exercise. The impact of undertaking at a later date would be relatively minor apart from the associated cost escalation related to the delay of undertaking the works. This infrastructure is to be designed, installed and connected in accordance with Water Corporation's design and installation requirements. Upon completion of the works and Water Corporation inspection and approval, the asset will be handed over as an Authority asset.

Domestic hot water service:

The domestic hot water supply to the accommodation buildings will be in accordance with AS/NZS 3500.4 and Plumbing Licensing Board requirements. The domestic hot water system shall consist of electric storage water heaters (one per 4x module), to the accommodation buildings. Central facilities buildings will be provided with a combination of electric instantaneous water heaters, and heavy-duty electric storage water heaters to suit the demand requirement of the individual facility. The function of a hot water supply system is to provide at each hot

water tap an adequate supply of water, at the required temperature, without undue delays, at all times and at satisfactory pressures, while minimising the possibility of waste of heat and water.
The minimum working pressure at the furthermost or most disadvantaged fixture or outlet shall not be less than 250 kPa (25 m head).
The maximum water velocity in hot water piping shall not exceed 1.0 m/s.
Main water control valves in buildings must be in readily accessible locations where they will be noticed such as under kitchen sinks or laundry troughs, not concealed in ducts.
Acoustically insulate pipes in areas where noise will be a problem and acoustically isolate pipes where vibration or structure borne transmission will be a source.
Hot water pipework systems should be designed so that hot water appears quickly at the draw-off taps when opened, to avoid the running to waste of an undue amount of water which has cooled while standing in the pipes. The user should not have to wait more than 30 seconds for the hot water he or she desires to run from the tap.
Hot water supply to all ablution fixtures within the building will be tempered to provide maximum hot water temperatures to the ablution fixture water outlets of:

- 50°C via a tempering valve to all areas other than disabled/accessible persons amenities.
- 45°C via a thermostatic mixing valve to all disabled/accessible persons amenities

Roof water & stormwater drainage:
The stormwater drainage system shall discharge freely from roofs to the surface water drainage system provided as part of the civil design. No allowance to be made for gutters and downpipes to buildings, unless required by exception.

Property sewer drainage:
The property site sewer drainage system is to be designed in accordance with AS/NZS 3500.2, Water Corporation, WA Plumbing Licensing Board and The Government of Western Australia Department of Health.
The site has a 4m east to west fall, which enables the entire site to achieve connection to the Authority sewer connection via gravity. The property sewer drainage system must be sized such that it has sufficient capacity to safely dispose of all building fixture waste discharging into the property sewer drainage system.
As stated above, the site is served by a 225Ø sanitary drainage connection. This connection is capable of receiving 3250 fixture units (FU). The below calculation identifies that the site fixture unit calculation totals 2,671 FU. Therefore, the sewer connection serving the site is appropriately sized to cater for the proposed site development.

Figure 3.7 - Sanitary Drainage Fixture Unit Calculation

Townhouse property sewer drainage:

There is limited sanitary drainage in the vicinity of the Stanley St facing townhouses. As such a sewer main extension would be required to service the townhouse sites. If this was to be undertaken now, it would cost in the vicinity of $1,800/m The anticipated sewer extension length is approximately 240m. This would result in an anticipated cost of $432,000 without allowance for the design costs and Water Corporation fees.

If this work is undertaken at the time of subdivision, there will need to be site sanitary drainage alterations, altering the gravity drainage from falling towards the west (into the accommodation sewer network), to becoming an east flowing network connecting into the new Stanley St sewer main which connects into the existing infrastructure in Coppin Place. (Refer to Appendix C).

We recommend undertaking the sewer extension work up-front now, and enabling Water Corporation to oversee and maintain this asset. It also removes the need for future work, and the risk of installing a sewer main that Water Corporation refuse to accept at a later date.

Fire water system:

The fire water supply to the buildings hydrant system is to be designed in accordance with AS 2419.1, AS 2304, AS2441, AS2941, DFES and Water Corporation requirements.

We propose connection to the existing 100Ø Authority water supply located in Kennedy St complete with inline above ground testable double check valve assembly.

A flow and pressure test of the authority street mains has been undertaken on the Kennedy St street hydrant, Lapwing Way street hydrant and the Stanley St street hydrant. Given that the site main is being taken from the Kennedy Street Authority main, this is the selected hydrant results to be reviewed.

The flow and pressure test results are as follows:

Test Location	Kennedy St
Date / Time	12th Sept 2024 11:00am

Main Size	100 AC
Flow Rate	Residual Pressure
0.00 L/s	300 kPa
5.00 L/s	260 kPa
10.00 L/s	210 kPa
15.00 L/s	85 kPa
18.85 L/s	15 kPa

Table 3.1 – Kennedy Street Hydrant – Flow and Pressure Test Results

Fire Water Tank Sizing Assessment

Data:

Number of Tanks		2							
Volume (each)		80	kL						
Infill rate		10	L/sec	based on flow and pressure test data					
Demand		20	L/sec	2	No of hydrants				
Time - Hours	0		1		2		3		4
Time - Minutes	0	30	60	90	120	150	180	210	240
discharge L (@ 10L/sec)	0	36000	72000	108000	144000	180000	216000	252000	288000
Infill L (@5L/sec)	0	18000	36000	54000	72000	90000	108000	126000	144000
Tank storage volume L	160000	142000	124000	106000	88000	70000	52000	34000	16000
Remaining tank volume L									16 kL
Therefore: following 4 hours of fire fighting with	2	No of hydrants	Remaining tank volume in Kilolitres						16

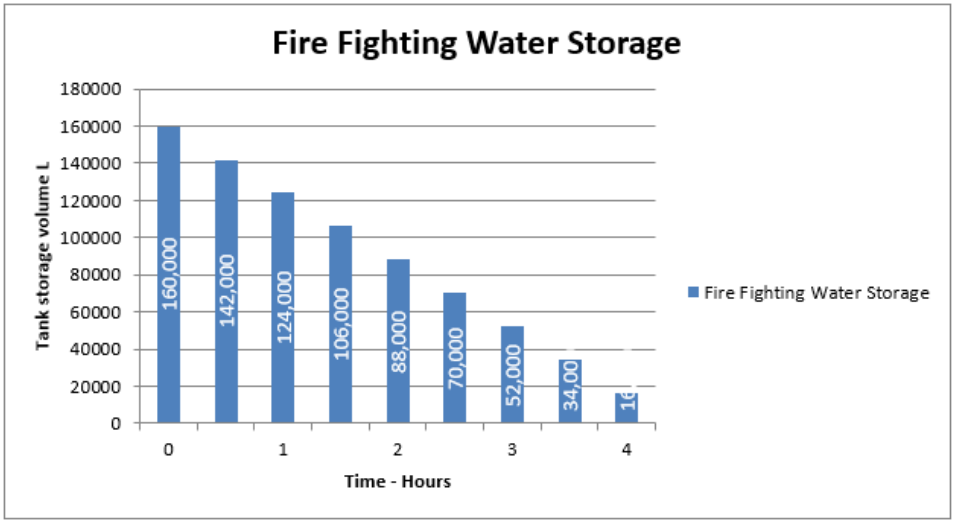

Figure 3.8 - Fire Water Tank Calculation

As per the above calculation, based on a flow rate of 10L/s @ 200kPa (min) achievable for tank replenishment, the tank size can be minimum 80kL each (160kL total).

Alternatively, consideration should be given to providing full water storage to the site (288kL) as per the design sketches in Appendix B and would recommend allocation of sufficient area on the site to account for fire pumps and tanks. This allows for 288kL of water storage across 2x 144kL tanks which isn't reliant on inflow during a fire event, and a dedicated diesel electric fire pump set located within a weatherproof enclosure.

Taking the above into account, it is proposed that the new Fire connection shall feed into on site Fire Tanks which in turn will supply on site Fire Pumps and Booster arrangement.

A 180 HDPE-CR boosted fire service shall run below ground to serve external Twin head fire hydrants to buildings greater than 500m2. Note, the fire hose reels serving accommodation areas are to be served from the Potable Water Ring Main (refer to the Domestic Cold Water description at the start of this section).

Executive summary

This Preliminary Urban Water Management Plan (UWMP) has been prepared for Grounded Group to support the development of lot 51 Kennedy St, South Hedland into South Hedland Regional Accommodation (SHRA) village. The village (herein referred to as 'the site') is located within the Town of Port Hedland (ToPH) and is located approximately 1,300 km northeast of Perth and approximately 9.5 km south of the Port Hedland town centre.

The site comprises an area of approximately 5.0 hectares (ha) and is proposed to be developed for worker accommodation. The site is proposed to consist of the following:

- Approximately 62 accommodation units (total of 248 rooms)
- Two UAT units (4 rooms)
- 15 town houses (45 rooms)
- Laundry modules
- Administration building
- Dining hall
- Gymnasium
- Maintenance and linen shed
- Recreation building
- Outdoor gym, swimming pool, sports multicourt and running track.

This preliminary UWMP provides adequate detail to support the development application by presenting the overall stormwater management strategy and requirements for the site and demonstrating compliance with Land Planning Policy (LPP) 11, ToPH. A final UWMP will be prepared at detailed design phase to document the detailed civil and engineering design for stormwater management infrastructure across the site.

This UWMP has been prepared in accordance with Better Urban Water Management (BUWM) principles. The report provides an overview of the site's existing physical and hydrological conditions as well as a preliminary drainage design, which has been developed in line with water sensitive urban design (WSUD) principles and relevant guidance and policy documents, to demonstrate how stormwater will be managed on site. This UWMP also describes the detailed stormwater modelling that was undertaken to inform the drainage design.

The key design and compliance objectives of the UWMP are summarised in Table 1.

Table 1: Design objectives and strategies

Key UWMP elements	Details
Introduction (Section 1)	Grounded Group is undertaking development of Lot 51, Kennedy St, South Hedland for worker accommodation. The site is zoned as "Urban Development" under the Local Planning Scheme (LPS) for the Town of Port Hedland Planning Scheme No. 7 (Department of Planning, Lands & Heritage, 2021). The site is also zoned as "Urban" within the Pundulmurra Structure Plan Area according to the LPS.
Climate (Section 2.2)	The site experiences a warm, desert climate with precipitation virtually absent year-round. The nearest Bureau of Meteorology (BoM) weather station to the site is the Port Hedland Airport weather station (Station Number 004032), located approximately 3.8 km from the site. Based on the rainfall data collected from 1942 to 2024 at this station, the local area experiences an average of 314 mm of rainfall annually. Based on climate data, the local area experiences monthly mean maximum temperatures between 30.2°C and 40.8°C and monthly mean minimum temperatures between 24.1°C and 33.7°C.
Topography (Section 2.3)	Regional topographic contours show that ground surface elevations range between approximately 10 and 15 m Australian Height Datum (mAHD), with the site grading from the northeast corner to the west.

Geology (Section 0)	Regional mapping indicates the site, and surrounds are underlain by alluvial deposits on floodplains (Af1); unconsolidated. Geoscience Australia soil mapping database indicates the alluvial units (Third Generation) are mixed floodplain deposits compromising mostly sand, with silt and clay adjacent to main storage channels, with these located in the south and western portion of the site.
Groundwater (Section 2.7)	Groundwater resource mapping available from the DWER Water Register (DWER, 2025) indicates that the site is underlain by the Pilbara – Fractured Rock aquifer in the Ashburton subarea in the Pilbara groundwater area. No known site-specific groundwater monitoring has been undertaken on site. Groundwater was not intersected in any of the boreholes (to a maximum depth of 1.5 m) at the time of the geotechnical investigation.
Surface hydrology (Section 2.8)	There are no defined waterways, watercourses, or drains located within the site. The site is within the catchment that drains to a minor open drain at Parker Street-Kennedy Street intersection (GHD, 2010). This minor drain ultimately discharges to a major tributary north of the North Circular road.
Wetlands (Section 2.9)	Wetlands have not been identified within or in close proximity to the site.
Non-potable water servicing (Section 3.3)	The proponent has an agreement with Water Corporation to use scheme water for irrigation with an allowance of 50,000 L per day. The landscape has been designed with water flow rates and limitations in mind. The design has been managed to ensure the allowance 50,000L per day for irrigation is not exceeded by the landscape requirements.
Water conservation (Section 4)	Water conservation measures will be adopted to create a "Waterwise" development and minimise water-servicing requirements. An irrigation strategy will be prepared for the project that will include the following considerations: - Low usage water emitters - Hydro zoning - Planting of water wise species - Improvement of soil conditions
Stormwater management (Section 5)	The following design criteria are adopted in the drainage strategy and preliminary drainage design: ▪ To retain/detain on-site stormwater runoff for 1 in 5 year (20% AEP) - 6 minute rainfall event (up to 15 mm rainfall) from impervious areas. ▪ To construct sufficient infrastructure to manage runoff and discharge stormwater to designated drainage areas or 'compounds'. Scour protection at culvert, pipe system and outlets shall be constructed in accordance with Town of Port Hedland Stormwater Disposal Specifications. ▪ To provide a detail design showing flow levels, peak flow rates and flood storage volumes for 1 in 100 year (1%AEP) event. ▪ To mitigate breeding of disease vector and nuisance insects by designing and maintaining stormwater management systems to contain no standing water for more than 72 hours. ▪ To provide habitable floor levels above 100-year (1% AEP) flood level. The stormwater drainage strategy of the development will focus mainly on retaining/detaining and infiltrating stormwater generated by the first approximately 15 mm (based on 6 minute - 20% AEP event) and not exceeding predevelopment flooding condition for 1% AEP event. This will be achieved through a combination of conveyance swales, drainage basin and a boundary swale along Kennedy Street. The site grading will result in two stormwater catchments with runoff from these being managed in the two drainage areas: the central drainage basin, and the boundary swale along Kennedy Street.
Groundwater management (Section 6)	▪ As per preliminary geotechnical investigations (Coffey Testing, 2025), groundwater has not been encountered in the geotechnical investigation, to the test depth of 1.5 m. The design levels do not involve reducing (ie. cutting) existing ground levels in the

Amended on 27/6/2025

	lower-lying western portion of the site. Additionally, stormwater basins and swales are designed to be shallow (ie. less than 0.5 m). Therefore, current groundwater separation is not likely to be affected and groundwater level management is not expected to be required for the site.
Monitoring (Section 8)	No pre-development monitoring has been undertaken at the site given the urban infill nature of the development and the absence of surface water features. Post-development monitoring will be limited to inspection (and rectification as required) of drainage infrastructure and associated landscaping.
Implementation (Section 9)	Details regarding the UWMP requirements, roles, and responsibilities related to water management have been provided.

1. Introduction

1.1. Background

This Preliminary Urban Water Management Plan (UWMP) has been prepared for Grounded Group to support the development of Lot 51, Kennedy St, South Hedland into South Hedland Regional Accommodation (SHRA), village. The village (herein referred to as 'the site') is located within the Town of Port Hedland (ToPH) and is located approximately 1,300 km northeast of Perth and approximately 9.5 km south of the Port Hedland town centre.

The site comprises an area of approximately 5.0 hectares (ha) and is proposed to be developed for worker accommodation. The site is proposed to consist of the following:

- Approximately 62 accommodation units (total of 248 rooms)
- Two UAT units (4 rooms)
- 15 town houses (45 rooms)
- Laundry modules
- Administration building
- Dining hall
- Gymnasium
- Maintenance and linen shed
- Recreation building
- Outdoor gym, swimming pool, sports multicourts &running track.

This preliminary UWMP provides adequate detail to support the development application by presenting the overall stormwater management strategy and preliminary design to satisfy stormwater management criteria per Land Planning Policy (LPP) 11, ToPH. It is anticipated that a final UWMP will be prepared at detailed design phase to document the detailed civil and engineering design for stormwater management infrastructure across the site.

This Preliminary UWMP has been prepared in accordance with Local Planning Policy (LPP) #11, ToPH and *Better Urban Water Management (*BUWM) principles (Department of Planning and Infrastructure, 2008). This UWMP provides an overview of the site's existing physical and hydrological conditions as well as a preliminary drainage design which has been developed in line with water sensitive urban design (WSUD) principles and relevant guidance and policy documents, to demonstrate how stormwater will be managed on site.

It is intended that once Development Application (DA) approval has been obtained a more detailed final UWMP will be prepared as a condition of development approval. The approval of the DA will allow the design team to progress the detailed design and advance the detailed design toward submission of the detailed civil drawings and the final UWMP. We understand the final UWMP will need to provide additional detail design to support approval for construction prior to commencement of works at the site.

1.2. Planning background

The site is zoned as "Urban Development" under the Local Planning Scheme (LPS) for the Town of Port Hedland Planning Scheme No. 7 (Department of Planning, Lands & Heritage, 2021). The site is also zoned as "Urban" within the Pundulmurra Structure Plan Area according to the LPS.

1.3. Design objectives

This UWMP is prepared with reference to State Planning Policy 2.9: Water Resources (Government of Western Australia, 2007) as well as the following guidance documents:

- Local Planning Policy #11, Stormwater management (ToPH, 2024)
- Western Australia State Water Plan (Government of Western Australia, 2007)
- Decision Process for Stormwater Management in WA (Department of Water and Environmental Regulation, 2017)

- Urban Water Management Plans: Guidelines for Preparing Plans and for Complying with Subdivision Conditions (Department of Water, 2008)
- Better Urban Water Management (Department of Planning and Infrastructure, 2008)
- Stormwater Management Manual for Western Australia (Department of Water, 2004-2007)
- Liveable Neighbourhoods (Western Australian Planning Commission, 2015)
- Water monitoring guidelines for better urban water management strategies and plans (Department of Water, 2012)

The UWMP details the water management principles and strategies to facilitate urban water management planning for the site. The report will achieve integrated water management through the following design objectives:

- Effectively manage the risk to human life, property damage and environmental degradation from water contamination, flooding, and waterlogging.
- Maintain and if possible, improve water quality (surface and groundwater) within the development in relation to pre-development water quality.
- Reduce potable water consumption within both public and private spaces using practical and cost-effective measures.
- Implement best management practices in regard to stormwater and groundwater management.
- Incorporate where possible, low maintenance, cost-effective landscaping, and stormwater treatment systems.

1.4. Previous studies

A number of local planning documents and an on-site geotechnical investigation have previously been completed that are relevant to the site. The documents that have been referred to for the preparation of the UWMP include:

- Pilbara Planning & Infrastructure Framework (WAPC, 2012)
- Town of Port Hedland Local Planning Scheme No. 7 (DPLH, 2021)
- Town of Port Hedland Local Planning Scheme No. 11, Stormwater Management (ToPH, 2024)
- Geotechnical Investigation Report (Coffey Testing, 2025)

Amended on 27/6/2025

2. Existing environment

2.1. Site location and existing land use

The site is located in the suburb of South Hedland as part of the Town of Port Hedland, located approximately 9.5 km south of the Port Hedland town centre and approximately 1,300 km northeast of Perth. The site was previously used mainly for recreational accommodation, known as 'Pundulmurra Village', to service the Department of Training and Workforce Development (DTWD) (Veris, 2017). The former DTWD buildings and infrastructure have now been demolished and removed, with bitumen carpark and accessways, transportable concrete foundations withstanding. The rest of the site (approximately 35%) is undeveloped, containing scattered trees and parkland. The site location and the surrounding area are shown in Figure 1.

The site is surrounded by residential land in all directions, with the North Regional TAFE located directly west of the site.

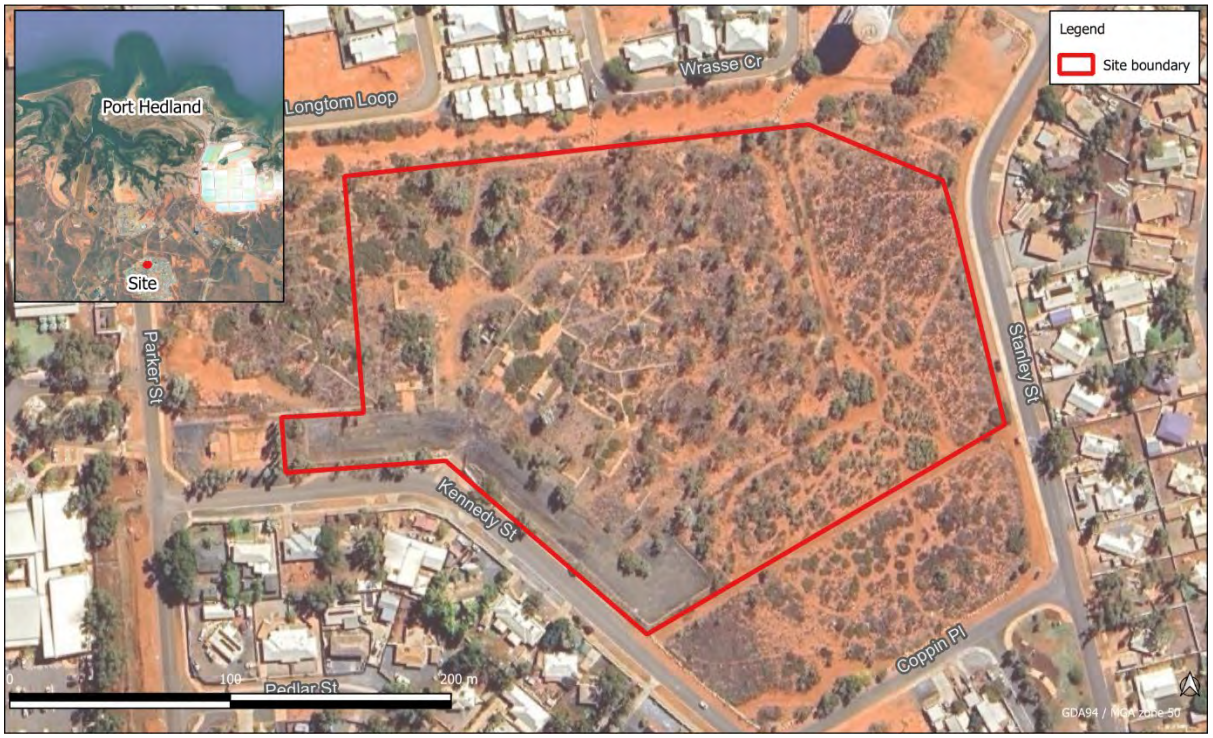

Figure 1: Site location

2.2. Climate

The site experiences a warm, desert climate with precipitation virtually absent year-round. The nearest Bureau of Meteorology (BoM) weather station to the site is the Port Hedland Airport weather station (Station Number 004032), located approximately 3.8 km from the site. Based on the rainfall data collected from 1942 to 2024 at this station, the local area experiences an average of 314 mm of rainfall annually (BoM, 2025).

Based on climate data, the local area experiences monthly mean maximum temperatures between 30.2°C and 40.8°C and monthly mean minimum temperatures between 24.1°C and 33.7°C (BoM, 2025). The monthly mean climatic data for rainfall and temperature is summarised in Table 2 below.

Amended on 27/6/2025

Table 2: BoM monthly temperature, rainfall, and evaporation

Statistic	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Annual
Mean rainfall (mm)	61.5	88.3	54.2	21.0	27.0	22.6	9.9	4.8	1.3	0.9	2.5	18.9	314.2
Mean max temp (mm)	39.4	39.8	39.7	38.9	34.3	30.3	30.2	32.5	36.3	39.2	40.6	40.8	35.0
Mean min temp (mm)	32.9	33.4	32.9	31.3	27.6	24.4	24.1	26.4	29.7	30.4	32.6	33.7	32.0
Mean evaporation (mm)													3,200

2.3. Topography

Feature survey shows topographic contours show that ground surface elevations range between 10 and 15 m Australian Height Datum (mAHD), with the site grading from the northeast corner to the west.

Figure 2: Topography

2.4. Geology

Regional mapping indicates the site, and surrounds are underlain by alluvial deposits on floodplains (Af1); unconsolidated. Geoscience Australia soil mapping database indicates the alluvial units (Third Generation) are mixed floodplain deposits compromising mostly sand, with silt and clay adjacent to main storage channels, with these located in the south and western portion of the site.

2.4.1. Land systems

Regional land systems have previously been mapped over the site and surrounding area. The mapping describes and groups the land with a recurring pattern on topography, soil type, and vegetation. Land systems mapping provides an indication of variability of the soils present over the survey area. According to the Soil Landscape Mapping data published by the Department of Primary Industries and Regional Development, the site is underlain by one land system:

Amended on 27/6/2025

Uaroo System (281Ua): Broad sandy plains, pebbly plains and drainage tracts supporting hard and soft spinifex hummock grasslands with scattered acacia shrubs.

2.4.2. Geotechnical investigation

A geotechnical investigation was undertaken for the proposed development by Coffey Testing in January 2025 (Coffey Testing, 2025). A total of six boreholes were drilled to a maximum depth of 1.5 m, with Dynamic Cone Penetrometer testing undertaking on all sites. Permeability testing was undertaken on samples taken at each of the boreholes, with results indicating permeability on site is low, ranging from 0.17 to 0.6 m/day (Coffey Testing, 2025).

Other results and conclusions of the geotechnical investigation are summarized below:

- The site is generally underlain by sandy topsoil with variable organic content and trace fines and silty sand.
- Groundwater was not encountered in any of the boreholes (to a maximum borehole depth of 1.5 m).
- On-site stormwater disposal via infiltration (i.e. soakwells and/or infiltration trenches) may be feasible, however the design of the infiltration systems will need to account for the sites soil conditions (low permeability) to ensure effective stormwater management.

The site investigation results are consistent with the regional soil type mapping. The geotechnical report is included as Appendix A.

2.4.3. Acid Sulphate Soils

Acid Sulphate Soil (ASS) is naturally occurring soil containing iron sulphides, which when oxidised, can lead to acidification of soils and groundwater and, consequently, extensive environmental damage. Department of Water and Environmental Regulation (DWER) broad-scale Acid Sulphate Soil (ASS) risk mapping is based on surface geology mapping and provides a broad-scale indication of the risk of occurrence of ASS. ASS risk mapping does not appear to be available for the area.

2.5. Contaminated sites

A search of DWER Contaminated Sites database has been undertaken and no recorded contaminated sites were identified within the site boundaries. The closest registered site is located approximately 600 m southwest of the site and is classified as ‘contaminated – remediation required’ (Site 72171) due to hydrocarbon contaminated groundwater located beneath the site.

2.6. Public Drinking Water Source Areas

The site is located within Pilbara Groundwater Allocation Plan area (DoW, 2013).

The site is not located within or near a Public Drinking Water Source Protection Area (PDWSA) as per Perth groundwater mapping (DWER, 2025).

2.7. Groundwater

2.7.1. Aquifers

Groundwater resource mapping available from the DWER Water Register (DWER, 2025) indicates that the site is underlain by the Pilbara – Fractured Rock aquifer in the Ashburton subarea in the Pilbara groundwater area.

2.7.2. Groundwater levels

2.7.2.1. Regional groundwater levels

There is no regional groundwater mapping available. Groundwater is anticipated to flow in a north-westerly direction towards the Indian Ocean, located approximately 10 km northwest of the site.

2.7.2.2. Site-specific groundwater levels

No known site-specific groundwater monitoring has been undertaken on site.

Groundwater was not intersected in any of the boreholes (to a maximum depth of 1.5 m) at the time of the geotechnical investigation in January 2025 (Coffey Testing, 2025).

2.7.3. Groundwater quality

No known site-specific groundwater quality monitoring has been undertaken on site. As such, no site-specific groundwater quality data is available.

2.8. Surface water hydrology

There are no defined waterways, watercourses, or drains located within the site. The site is within the catchment that drains to a minor open drain at Parker Street-Kennedy Street intersection (GHD, 2010). This minor drain ultimately discharges to a major tributary north of the North Circular Rd (refer Figure 3).

Within the site runoff is expected to occur from north to south and east to west, with infiltration generally at source due to the sandy soils. Discharge from the site is expected to occur primarily as sheet flow towards Kennedy Street which then conveys flow via the roadway to the minor drain along Parker St, with a large kerb opening being located at the intersection of Kennedy and Parker Streets.

The south-west portion of the site is mapped as prone to flooding during major storm events as per 'The Report for South Hedland Flood Study' (GHD, 2010). The flood study refers to a modelled 1% AEP flood level near the intersection of Parker and Kennedy Streets of 10.56 mAHD and predicted peak flow rate of open drain along Parker Street as 6.9 m3/s.

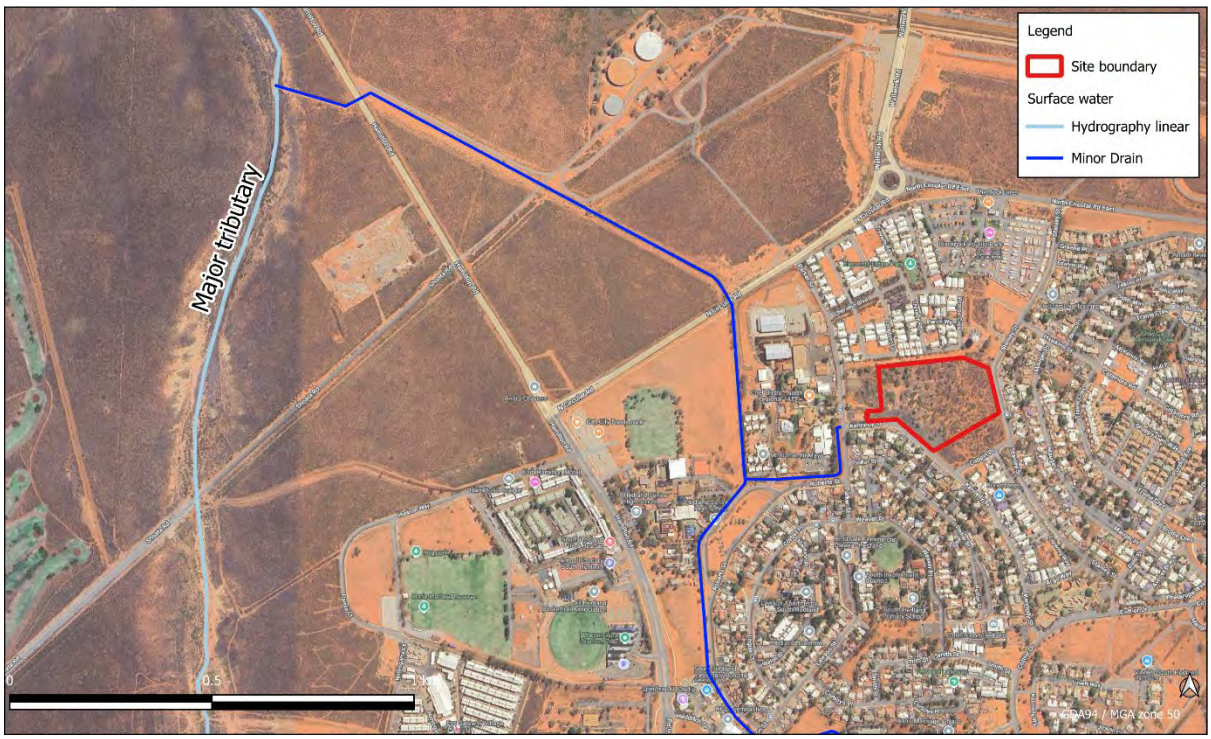

Figure 3: Surface hydrology

2.9. Wetland and GDEs

The Department of Biodiversity Conservation and Attractions Directory of Important Wetlands in Australia – Western Australia mapping has not identified wetlands within or in close proximity to the site. The nearest mapped wetland is the Leslie (Port Hedland) Saltfields System (ref. 68) which is located approximately 15 km northeast of the site (DBCA, 2025).

According to the Bureau of Meteorology (BoM)'s Groundwater Dependent Ecosystems Atlas there are no groundwater dependent ecosystems (GDE)'s located within the site or the immediate surrounds.

Amended on 27/6/2025

2.10. Sewage Sensitive Areas

Sewage Sensitive Areas (SSAs) are proclaimed under the *Government Sewerage Policy* (GSP) (DPLH, 2019) to protect groundwater and surface water systems. A review of the GSP online data set (DPLH, 2025) indicates the site is not located within a sewage sensitive area.

2.11. Heritage

2.11.1. Aboriginal Heritage

According to the Department of Planning Lands and Heritage (DPLH) Aboriginal Heritage Inquiry System (AHIS), there are no indigenous registered sites within or adjacent to the site.

2.12. Summary of constraints and opportunities from the existing environment

The previous sections have identified the following key constraints and opportunities for development at the site in regard to the current existing environment:

- Surface elevations within the site are generally between 15 and 10 mAHD.
- Groundwater was not encountered in the geotechnical investigation to test depths of 1.5 m. Site levels are not proposed to be significantly altered / lowered in the lower-lying portion of the site (ie. current groundwater separation will not be affected).
- The site is generally underlain by silty sandy with relatively low permeability (0.2 to 0.5 m/day).
- There are no defined waterways, watercourses, or drains located within the site. The site drains as sheet flow to Kennedy Street and then to an open drain at Parker Street-Kennedy Street intersection.
- There are no mapped wetland or water dependent ecosystems in proximity to the site. Therefore, the site is not considered to have any nearby sensitive environmental receptors.

Amended on 27/6/2025

3. Water servicing

The site is connected to reticulated sewer and water given its former development and use for the accommodation units. Upgrades may be required to support the development and will be implemented subject to consultation with service providers.

3.1. Potable water

The site is currently serviced by Water Corporation through the Port Hedland Water Supply Scheme.

3.2. Wastewater

The site is located within close proximity to the existing Water Corporation reticulated sewer system with an existing connection into the lot near its western boundary.

3.3. Non-potable water supply

The proponent has an agreement with Water Corporation to use scheme water for irrigation with an allowance of 50,000 L per day. The landscape has been designed with water flow rates and limitations in mind. The design has been managed to ensure the allowance 50,000L per day for irrigation is not exceeded by the landscape requirements.

3.3.1. Groundwater licences

The Water Register (DWER, 2025) indicates there are no groundwater licences held within the site or the immediate surrounds.

Amended on 27/6/2025

4. Water conservation strategy

Conservation of water through fit-for-purpose use and best management practices is encouraged to minimize the wastage of water. Fit-for-purpose describes the use of water that is of a quality suitable for the required use of the water. Fit-for-purpose principles have been utilised in the water conservation strategy for the site.

4.1. Proposed strategy

The State Water Plan (Government of Western Australia, 2007) is a strategic policy and planning framework to meet the state's water demands to the year 2030. One of the key targets is to reduce scheme water consumption to 40 kL - 60 kL per person per year. Water conservation measures will be adopted to create a "Waterwise" development and minimise water-servicing requirements. The water conservation strategy will aim to reduce water demand through incorporating a variety of initiatives, which are described in more detail below. The development will seek to achieve the following objectives:

- No potable water should be used outside the homes and buildings where alternative water sources are available.
- Waterwise landscaping techniques should be employed in POS areas, and irrigation should be restricted during the day.

Methods that will be utilised to achieve these criteria include:

- Assess opportunity to irrigate landscape areas with groundwater or other non-potable water sources.
- Water efficient fixtures and fittings (WEFA) installed throughout the development.
- Waterwise landscaping design incorporating waterwise native plants to reduce irrigation demand and limiting turf to areas of active recreation.
- An irrigation strategy will be prepared for the project that will include the following considerations
  - Low usage water emitters
  - Hydro zoning
  - Planting of water wise species
  - Improvement of soil conditions.

Amended on 27/6/2025

5. Stormwater management

5.1. Design criteria and objectives

The objective for stormwater management at the site will be to effectively manage runoff generated from small, minor, and major rainfall events. The key principles for stormwater management at the site are to safely convey and contain runoff from major events to provide flood protection, and to promote opportunities for capture and infiltration close-to-source of run-off from first flush and small rainfall events. The engineering and drainage design will seek to implement water sensitive urban design (WSUD) principles and best management practices where possible. The key design criteria for the site are outlined in Table 3 and have been established in accordance with LPP 11 (ToPH, 2024).

The south-west portion of the site is mapped as prone to flooding during major storm events as per 'The Report for South Hedland Flood Study' (GHD, 2010). The flood study refers to a modelled 1% AEP flood level near the intersection of Parker and Kennedy Streets of 10.56 mAHD and peak discharge of 6.9 m3/s. It is to be noted that the study finding seems not directly relevant to the current drainage of the site as 1) raising car park in reference to the 1% AEP flood level of GHD (2010), would result in significantly higher levels above Kennedy Street and potentially impact flooding of existing lots on Kennedy Street; 2) TAFE site on Parker Street is subjected to same flood levels as per GHD (2010), but doesn't appear to have raised levels in reference to the 1% AEP flood levels based on desktop analysis.

Based on above, the habitable finished floor levels have been kept above 1% AEP flood level of GHD (2010), however, freeboard has been decided based on 1% AEP TWL in the drainage basin in the site. The car park has been graded and levelled to tie in Kennedy Street.

The overall stormwater management criteria is detailed in **Table 3**, these will be further refined and detailed in the subsequent, final UWMP at detailed design phase.

Table 3: Stormwater management design criteria

Criteria	Provision to Satisfy the Criteria
To retain/detain on-site stormwater runoff for 20% AEP (1 in 5 year) – 6 minute event, up to 15 mm rainfall, from impervious areas.	▪ Drainage Basin and Kennedy St Swale are designed to retain runoff from 20% AEP - 6 minute duration event. This will assist with maintaining pre-development hydrological conditions whereby widespread infiltration occurs to the pervious ground, as well as reduce the movement of sediments from the site.
To construct sufficient infrastructure to manage runoff and discharge stormwater to designated drainage compounds / areas. Scour protection at culvert, pipe system and outlets shall be constructed in accordance with Town of Port Hedland Stormwater Disposal Specifications.	▪ Run-off up to 20% AEP (6 minute) event is retained in the proposed Basin and Swale within the site. ▪ No runoff from site will occur for this minor design event. ▪ Scour protection will be provided at flow concentrations, ie. stormwater inlets / outlets.
To provide a detail design showing flow levels, peak flow rates and flood storage volumes for 1 in 100 year event.	▪ Summary of 1% AEP (1 in 100 year) flood levels, peak flow rates and flood storage is provided. ▪ The basin and swale provide considerable storage for major events and run-off volumes post-development i.e. 750 m^3 is not exceeding the pre-development run-off of 1,120 m^3. ▪ The site will discharge to Kennedy St as sheet flow with only a minor increase (<0.1 m3/s) in peak discharge relative to pre-development conditions.
To mitigate breeding of disease vector and nuisance insects by designing and maintaining stormwater management	▪ Drainage basins and swales are designed as shallow systems (up to maximum 0.5m). Retained stormwater is therefore anticipated to infiltrate within 48 hours. Thus, no standing water for more than 72 hours.

Amended on 27/6/2025

Criteria	Provision to Satisfy the Criteria
systems to contain no standing water for more than 72 hours.	
To have finish ground level of the lots 0.3 m above 100-year flood level.	▪ Building / habitable floor levels will be at least 0.3 m above the 1% AEP Top Water Level in the basin and swale, as well as the 1% AEP flood level in the local arterial drainage network.

5.2. Stormwater drainage strategy

The stormwater drainage strategy of the development will focus mainly on retaining/detaining and infiltrating stormwater generated by all rainfall events up to and including 20% AEP (6 minute) event and not exceeding predevelopment flooding condition for 1% AEP event. This will be achieved through a combination of conveyance swales, drainage basin and a boundary swale along Kennedy Street. Detailed plans on roof directions are included in **Appendix B**, further details of collection points and flow to be added at final design stage.

The site grading will result in two stormwater catchments with runoff from these being managed in the two drainage areas: the central drainage basin, and the boundary swale along Kennedy Street. The stormwater management plan is illustrated in Figure 4.

5.2.1. Minor rainfall events

The objective for small and minor rainfall events is to retain or detain stormwater on site (up to the first 15 mm), thus allowing for some infiltration of rainfall in line with existing conditions, and on-site retention of sediments and other pollutants. The drainage basin and Kennedy Street swale are designed to retain runoff from up to 20% AEP 6-minute duration event.

5.2.2. Major rainfall events

For all rainfall events up to and including the 1% AEP event, run-off is safely and effectively conveyed via swales to the low points in the site where flood detention can occur in either the central drainage basin or swale along Kennedy Street. These areas will overflow as sheet flow to Kennedy Street similar to existing conditions. Overflow volumes from these storages will not exceed the existing flooding conditions, with the modelled discharge volumes being lower in the post-development conditions. The flood detention areas also help to attenuate peak discharge rates, which are only slightly higher in the post-development condition.

The objective for the major (1% AEP) rainfall event is to protect people and property from flood risk, as well as maintaining habitable floor levels of above 1% AEP flood levels.

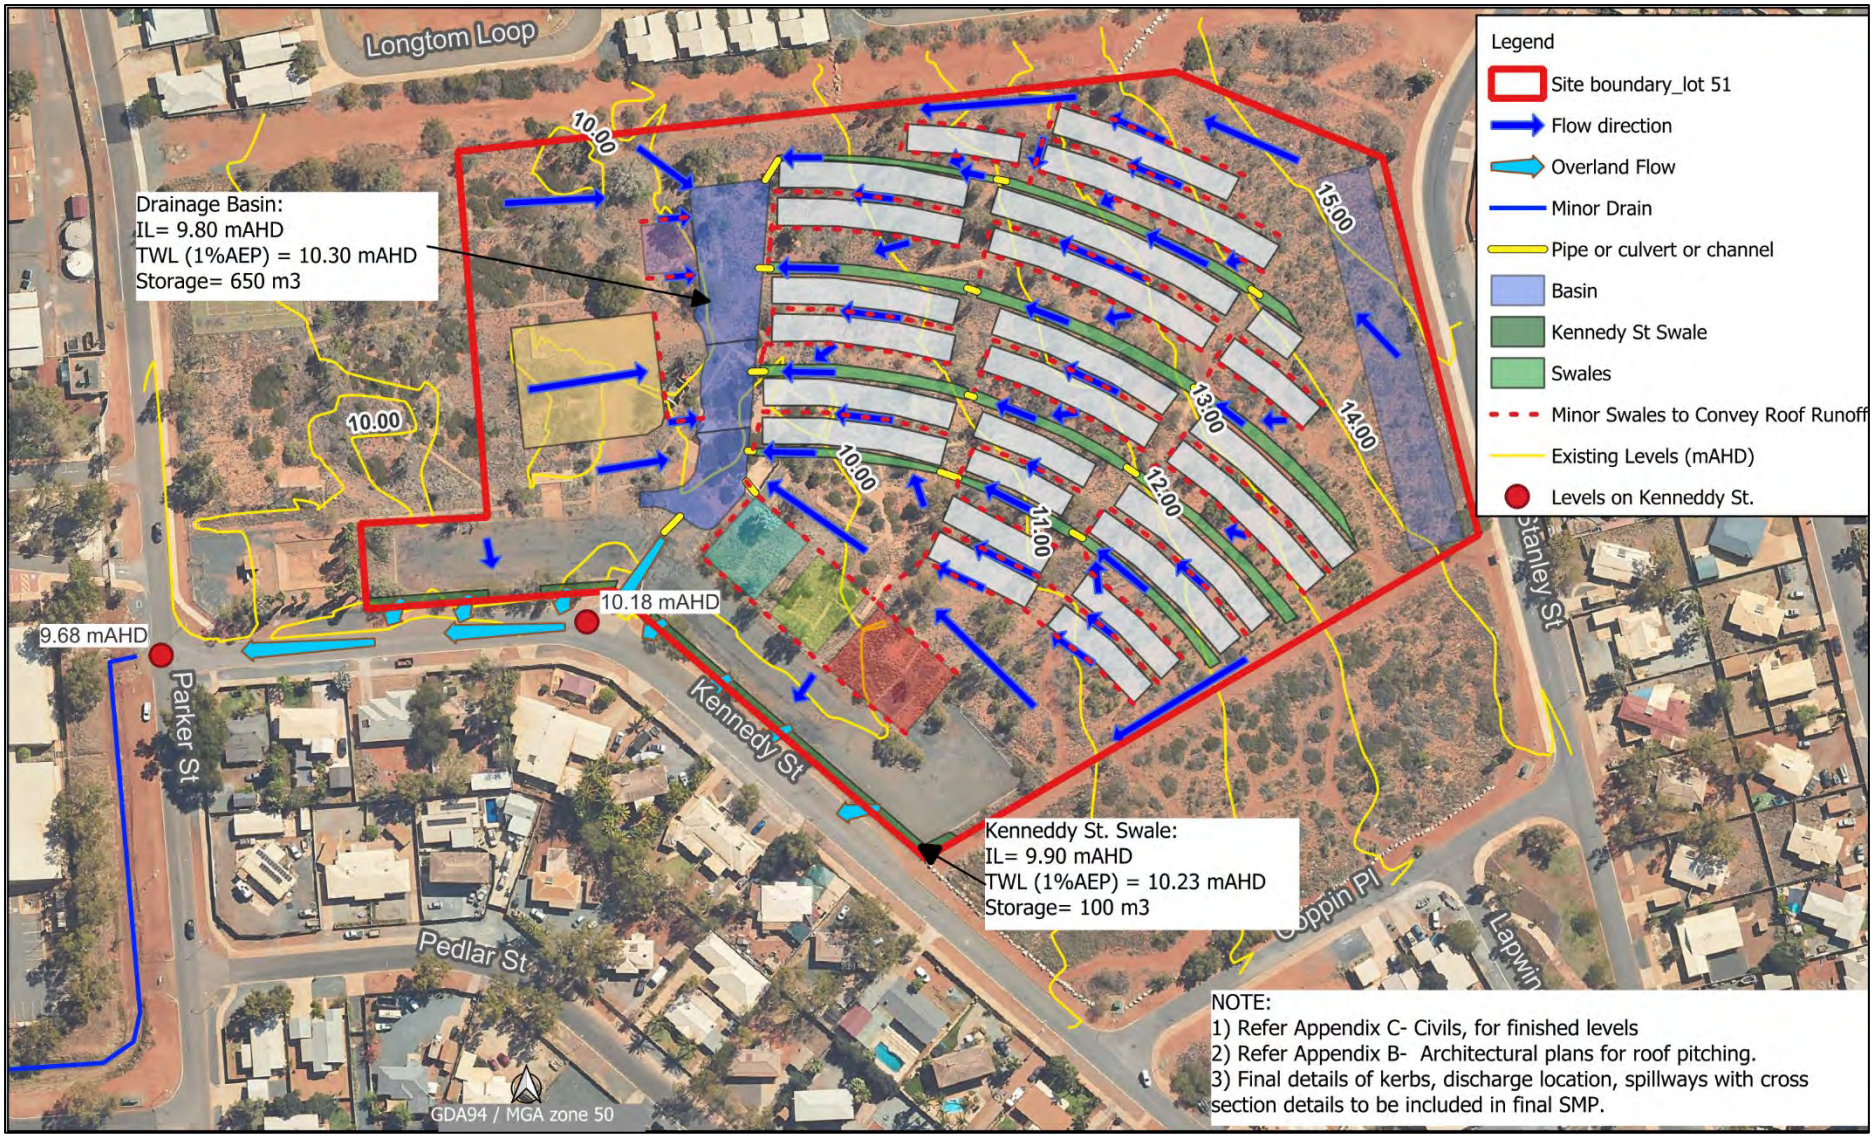

Figure 4: Stormwater management plan

5.3. Stormwater Modelling

Pentium Water have undertaken analytical modelling of the potential stormwater drainage volumes and required basin capacities to manage minor and major rainfall events. An XPSWMM model was developed to simulate the full range of design rainfall durations to identify the critical event durations and required storage volumes for each of the 20% and 1% AEP events (5 year and 100-year ARI events, respectively).

The modelling approach and assumptions are summarised below:

- 2 catchments were modelled – Ct 1 area draining to the drainage basin (conveyed via swales or directly to the basin) and Ct 2 area draining to a swale along site boundary along the Kennedy Street (refer Figure 4).
- A network of small conveyance swales are assumed within Ct 1 to collect runoff from upstream areas; these are modelled with a retained water depth of up to 0.2 m (ie. where controlled by small culverts or overflow channels at pedestrian path crossings) above which these overflow to the downstream basin.
- The hydrologic model included sub-division of the catchment into sub-catchments which are further sub-categorized according to land use types such as road reserves (including carparks), pedestrian paths, various accommodation and administration areas and various pervious areas (i.e. swales, sports multicourts etc.). The details of these land use types in the two catchments are provided in the Table 5.
- The indicative details of hardstand areas is provided in Appendix B – architectural plans. Asphalt material is proposed in carpark, further details to be provided at final design stage. For runoff calculations the are is categorised as pervious and impervious as detailed in **Table 4**.
- Catchment areas, levels and slopes in the modelling are based on the prelim design provided in Appendices B & C. Final levels, slopes and cross-sections will depend on the final civil designs and will be documented in the final UWMP.
- The losses and Manning's roughness parameters used in the hydrological modelling are provided in **Table 5**.
- A design infiltration rate of 0.2 m/day with a reduction of 50% to 0.1 m/day to account for blockage / sedimentation at lower water depths in the storages. The drainage basin geometry is modelled with 1:6 batters and a depth of 0.5 m. The Kennedy St Swale geometry is modelled with 1:3 batters and a depth of 0.3 m.

Table 4: Land use in the post development catchments

Catchment	Area (sqm)	Pervious Area (sqm) Land uses	Impervious Area (sqm) Land uses
Ct. 01			
Discharging to Basin via Swales	23,400	12,900 Gardens/Landscape area, swales and courtyards	10,500 Roof, Pedestrian path, Road, Carparks
Discharging to basin directly	20,600	6,700 Gardens/Landscape areas, Basin	13,900 Roof, Pedestrian path, Road, Carparks
Total Ct. 01	**44,000**	**19,600**	**24,400**
Ct. 02	6,000	0	6,000 Road, Carparks
Total (Ct. 01 and Ct.02)	**50,000**	**19,600**	**30,400**

Table 5: Modelled loss rates and Manning's n (routing coefficient)

Land Use type	Area (m2)	Initial loss (mm)	Continuing loss (mm/hr)	Manning's n
		Pre Development		
Impervious (paved area along Kennedy St boundary)	3,000	1.0	0.0	0.014
Pervious (Remaining area)	47,000	15	0.7	0.030
Total	**50,000**			
		Post Development		
Impervious (Buildings, Roads, Car parks, Pedestrian paths)	30,300	1.0	0.0	0.014
Pervious (Gardens, Swales, Basins)	19,700	5.0	0.7	0.030
Total	**50,000**			

The results of the hydrologic and hydraulic modelling are provided below in Table 6. In addition, the key model outputs in terms of existing versus post-development conditions for the 1% AEP (10 minute) event are summarised as follows:

- **Peak discharge**; 0.40 m^3/s existing conditions, 0.49 m^3/s post-development conditions.
- **Discharge volume**; 1,120 m^3 existing conditions, 750 m^3 post-development conditions.
- Note: results for the 20% AEP-6 minute design event not provided as there is nil discharge from the post-development site in this event.

Table 6: Modelling Results

Catchment	20% AEP	1% AEP
Drainage Basin		
Total Runoff Volume (m^3)	400	1,300
Water depth (m)	0.23	0.50
Basin Storage (m^3)	400	650
Runoff from site (m^3)	0	650
Peak Discharge (m^3/s)	0	0.46
Invert Level (mAHD)*	9.80	9.80
TWL Level (mAHD) *	10.03	10.30
TWL area (m^2)*	1,700	2,000
Kennedy Street Swale		
Runoff Volume (m^3)	65	200
Water depth (m)	0.23	0.30
Basin Storage (m^3)	70	100
Runoff from site (m^3)	0	100
Peak Discharge (m^3/s)	0	0.28
Invert Level (mAHD)*	9.90	9.90
TWL Level (mAHD)*	10.13	10.23
TWL area (m^2)*	400	450

*Subject to change as per detailed civil design.
Note: 20% AEP modelled with 6 minute design event duration. 1% AEP modelled at critical duration (for discharge rate) of 10 minutes.

Amended on 27/6/2025

5.4. Non-structural controls

Non-structural controls will be used to provide additional stormwater quality management and will include establishing operation and maintenance activities. The development will use the following non-structural controls to improve stormwater quality and reduce contamination.

5.4.1. Nutrient control and landscaping

Landscape design and maintenance requirements and practices will be established, including measures for improvement of stormwater quality, such as:

- Appropriate native plant species are continually used
- Landscaped areas to be maintained
- Recommended fertiliser, pesticide and irrigation regimes are followed

5.4.2. Waste and construction management

Waste management plans will include provisions for stormwater protection through:

- “At source” management of litter, sediment, and organic material such as pavement and carpark sweeping
- Prompt removal of litter when discovered
- Discouraging waste dumping in drains and drainage swale through restricted access (e.g. bollards) and signage
- Providing sufficient facilities for rubbish disposal
- All development construction activities, including road and infrastructure construction, will be subject to sediment and erosion control measures.

Amended on 27/6/2025

6. Groundwater management

As per preliminary geotechnical investigations (Coffey Testing, 2025), groundwater was not encountered in the test holes which extended to 1.5 m depth. Given the infill nature of the site (ie. surrounded by existing development) and the fact that design levels are not lowered from existing levels through the lower lying portion of the site, the groundwater separation is not expected to change as a result of development.

Whilst groundwater elevations beneath the site are not known, the results of the geotechnical investigation suggest that there is some groundwater separation. In addition, stormwater management areas (basin and swales) are designed as shallow features (ie. up to only 0.5m deep). It is therefore considered unlikely that groundwater level control / management will be required at the site.

Amended on 27/6/2025

7. Management works

7.1. Construction and waste management

Construction work undertaken during development will be controlled and monitored by the proponent/development manager to ensure that the specified engineering drawings are followed, and the drainage system is not compromised and continues to function as intended. In addition, management and control measures to be implemented during construction works include:

- Waste management measures will be put in place to prevent litter and construction wastes from collecting in the drainage system and polluting downstream receiving environments.
- Temporary fencing will be used during the earthworks/construction phase to prevent unauthorised access to the site.

7.2. Erosion and sediment control

Erosion and sediment control will be undertaken during construction to maintain the integrity of the drainage network. This will include:

- The civil contractor will use groundwater and/or polymer dust suppression material for dust suppression and stabilisation of site area during construction work.
- Placement of silt fencing where required adjacent to drains, waterways, etc.
- Further details will be provided by the civil contractor via a Construction and Environmental Management Plan, if relevant.

Amended on 27/6/2025

8. Monitoring

8.1. Pre- and post-development monitoring

No pre-development monitoring has been undertaken at the site given the urban infill nature of the development and the absence of surface water features.

Likewise, post-development groundwater and surface water monitoring is not considered necessary. Post-development monitoring will be limited to routine inspection and rectification as required of drainage infrastructure, to ensure that the objectives described herein continue to be met. Post-development drainage monitoring and maintenance requirements will be detailed in the final UWMP.

Amended on 27/6/2025

9. Implementation

Table 7 outlines the key roles and responsibilities associated with water management during future development of the site.

Table 7: UWMP implementation roles and responsibilities

Principle	Role	Responsibility	Timescale
Construction stage management	Construction and site works management	The proponent	As required during construction.
	Waste and pollution management	The proponent	As required during construction.
	Dust suppression and erosion control	The proponent	As required during construction.
Drainage infrastructure	Maintenance of stormwater infrastructure	The proponent	Stormwater network to be visually inspected quarterly with blockage or scour issues to be rectified as required.
Open space and landscaped areas	Maintenance of drainage infrastructure within Open space	The proponent	As required to be detailed in Final UWMP.
	Fertiliser application	The proponent	As required to be detailed in Final UWMP.
	Irrigation systems	The proponent	As required to be detailed in Final UWMP.

Amended on 27/6/2025

1)Introduction

This report presents the results of a geotechnical investigation conducted by Coffey Testing for the proposed South Headland Village project at the proposed location of Kennedy Street connecting with Parker Street at west, Coppin PI at south east and has Stanley Street at the eastern side, with residential dwelling on North,South Headland WA. The location of the site is shown on Figure 1. The work was commissioned by Franco Harkins – BEng (Honors) Civil Engineering, Wesley Symonds – Laboratory Manager Coffey Testing, Coffey Testing. Google Map Plan supplied shows the Borehole locations in figure 1.

The objectives of the geotechnical investigation were to:

- Investigate underlying soil conditions.
- Assess subsurface soil and groundwater conditions across the site and recommendation of design water level and minimum clearance to base of drainage infrastructure.
- Provide a site classification in accordance to AS 2870-2011.
- Provide recommendation on suitable footing systems for the proposed development.
- CBR value for pavement design at ground level.
- Recommend appropriate site preparation procedures including compaction criteria.
- Assess the suitability of the site for on-site disposal of storm water by infiltration.
- Provide Permeability rates for storm water design

Figure 1: Site Location with borehole logs

2. Field investigation

Fieldwork for the investigation was undertaken on 16 November 2024 and comprised:6 boreholes logged, extending to a depth of 0.5 to 1.5 m. Three extra refusals beside boreholes can be seen in the figure 1 with Refusal 1 at 100mm depth, refusal 2 at 450mm depth and refusal 3 at 100 mm depth. Dynamic Cone Penetrometer on 6 Sites. This is shown on plans supplied and measuring off existing features and is shown on Figure 1. The locations of the borehole are shown in figure 1. The borehole was drilled using a heavy-duty Kanga drilling rig supplied and operated by Coffey Testing. A 250mm auger piece was used to drill the boreholes. The borehole log report and photos are provided as reports attached, along with the dynamic cone penetrometer results conducted at 6 sites. Samples were taken from chosen boreholes and were tested for Particle Size Distribution, Linear Shrinkage, Maximum Dry Density, California Bearing Ratio and Permeability which are noted on borehole reports where they were taken, and lab results can be seen at appendix section. The fieldwork was performed by a geotechnical technician from Coffey Testing who located the test positions, logged the material encountered and performed the sampling under the supervision of Wesley Symonds.

2.1 Dynamic Cone Penetrometer (DCP) Tests

A total of 6 DCP tests were carried out immediately adjacent to selected test pit locations to provide an indication of the in-situ density of the intersected materials. The DCP tests faced refusal at depths 0.7m with 25 to 28 blows summarised in lab report. The DCP results are presented in appendix of laboratory results as blows per 100mm versus depth of penetration.

3. Laboratory Testing

Laboratory testing was conducted by Coffey Testing, a NATA accredited laboratory based in Port headland, WA. The laboratory test results are summarised, and the laboratory test certificates are presented in Appendix C. Testing included the following:

- Particle Size Distribution (AS1289.3.1.2, 3.3.1 and 3.4.1)
- Maximum Modified Dry Density (AS1289.5.2.1)
- Unsoaked California Bearing Ratio (AS1289.6.1.1).
- Constant Head Permeability (AS 1289 6.7.1 &2.1.1)

4. Site Conditions

The site is located near to the Great Northern Highway. The ground is flat and overlain by short-rooted vegetation. There is paddock dumped piles of non-plastic material like the sand encountered on the borehole logs provided. These piles were also overlain with vegetation.

The site location of proposed South Head land Village Project, Kennedy Street in South Headland, Western Australia, is situated at a prominent intersection, where Kennedy Street connects with Parker Street and Coppin Place, with residential dwellings at north. It is located near the Great Northern Highway. The site location can be seen in figure 1.

The area is described as having flat terrain with short-rooted vegetation covering the land. The site is characterized by a relatively open environment, with little in the way of significant topographic variation. The soil on the site appears to include some piles of non-plastic material, like sand, which may have been deposited in the area, possibly from prior land use or agricultural activities. These sand piles are often covered by vegetation, providing some ground cover, though not dense or deep-rooted.

The existing site consists of block sheds, lightly sealed road, trees, and concrete floors which can be seen at appendix photos.

5. Subsurface Conditions

5.1 Topsoil

Topsoil was intersected in all test pit locations to depths typically ranging between 0.15m and 0.3m. The topsoil was observed to typically comprise loose, pale brown, fine to medium grained sand with a trace of fines and variable organic content.

5.2 Silty Sand

The upper silty sand unit was intersected in all the test pit locations and extended to depths of between 0.0m and 1.5m (base of layer). The silty sand was observed to generally comprise pale brown, fine to medium grained sand, with non to low plasticity silt and a trace of plant roots. Test pit observations and inferred DCP results indicate the in-situ relative density of the silty sand is loose to medium dense at near surface, becoming medium dense within depths of generally less than 1m below ground surface. Grading analysis of sample indicate that the silty sand sampled contains between 12% of 15% silt sized particles, between 81% and 88% sand. Visual tactile method adopted describes as non to low plastic Modified compaction testing of six samples produced modified maximum dry density (MMDD) results from 2.01t/m3 to 2.04t/m3 and optimum moisture contents (MOMC) from 7.5% to 9% respectively. California Bearing Ratio tests (unsoaked) conducted on the samples compacted to average of 95% laboratory density ratio produced CBR values from 30% to 40% respectively.

5.3 Groundwater

Ground water was not intersected in any of the test pit locations at the time of investigation to the full depth of investigation till 1.5 m depth. It is unlikely that local groundwater will be encountered within the first 1.0m depth. However, groundwater levels may fluctuate depending on seasonal variations. If groundwater seepage is encountered during excavation, appropriate site drainage must be readily installed and pumped to a legal discharge point during construction for any stormwater infiltration.

6. Geotechnical Evaluation and Recommendations

6.1 Site Preparation and Earthworks

Prior to footing placement or placing any additional fill on site, the surface should be stripped of delirious material and proof rolled to achieve at least 95% MMDD and tested to AS1289.5.8.1,5.2.1,2.1.1 by an accredited laboratory or 8 blows per 300mm with the Perth sand penetrometer. Sandy soils should achieve a dry density ratio of 95%. Following excavation for foundations, the bases of footings should also be compacted to achieve at least 95% MMDD or 95% dry density ratio. To minimize the potential for unnatural or extreme moisture variation and subsequent soil volume changes within the foundation strata, the recommendations given in the CSIRO “Guide to homeowners on foundation maintenance and footing performance” should be adopted.

Engineered fill should be placed in loose layers of no greater than 250mm thickness, and each layer should be compacted with suitable equipment to achieve a minimum of 95% of modified maximum dry density (MMDD). It is recommended that confirmation of compliance with compaction requirements be made by field density testing in general accordance with AS3798 (Guidelines on earthworks for commercial and residential developments).

6.2 Site Classification according to AS 2870-2011

Based on the soil profile and site conditions, the site is considered a Class ‘S’ classification as the site may be subjected to slight ground surface movement for moisture changes comprising of slightly reactive clay. This classification is based on Table 2.1 and 2.3 from AS 2870-2011.

The underlying site classification of the site is considered a Class ‘S’ with the estimated ground surface movements (Ys) of 10 – 20 mm can be expected beneath any proposed footings founded on the natural soil at this site. Coffey testing must also be notified for reconsideration of the classification if any site levelling works with site cuts greater than 2.0m or any other major changes to the construction site.

6.3 Footing design and allowable bearing capacity

It should be noted that the allowable bearing pressure of soils and rock is dependent on the load size, shape, embedment, and configuration of the footing. High level pad footings founded a minimum of 0.6 m depth and up to 3 m wide or minimum of 1 m wide strip footings can be designed using the allowable bearing pressure in Table 1 below. All footings should be found into 'controlled' fill or competent natural soils.

Table 1: Allowable bearing pressure for foundations

Founding Material	Approximate depth/Strength	Allowable Bearing Pressure (Kpa)
Silty sand	0.4 to 1m/ Medium Dese	100

Allowable bearing capacity is subjected to mechanical compaction. We note that the natural silty sand or sand material could easily be loose once disturbed during excavation works. Hence it is recommended that the bearing capacity presented in Table 1 above to be applied subject to ensuring the base of the footing receives adequate compaction by mechanical compaction. It is also prudent to ensure that detailed excavations should be undertaken with care to minimise disturbance to the surrounding soils.

There could be possibilities where excavation to founding levels will be required to be deeper upon the footing inspection by an experienced geotechnical engineer. In this case, concrete blinding may be required for some excavation taken deeper to more competent material.
All footings must be founded to a material and depth of equivalent characteristic surface movement. Where different sections of building are to be supported on different types of footing systems or differing founding material, the design should be carried out by a suitably qualified and experienced engineer in accordance with Section 4 AS2870 – 2011 Design by Engineering Principles.

6.4 Recommended Pavement Subgrade Design Parameters

The subgrade material would be expected to comprise engineered fill (minimum thickness ranging between 0.5m and 1.1m), and assuming that the natural silty sand unit is utilised, a subgrade CBR value of 10% is recommended for pavement design. Laboratory CBR values of between 30% and 40% were recorded from testing of the silty sand unit, however, it should be noted that a maximum subgrade CBR value of 10% is normally adopted for similar materials in pavement design. Proposed subgrade material should be compacted to achieve a modified maximum dry density of 95% (MMDD) to a minimum depth of 300mm below subgrade level. Based on assessment of the material properties, the silty sand does not satisfy the criteria for use in pavement layers (i.e. material is generally too fine for application in base and subbase layers) and therefore appropriate pavement materials with greater modulus of elasticity should be imported from commercial sources.

6.7 Recommendation on onsite disposal of storm water by infiltration

Based on the results of the permeability tests ranging from 2x10^-6 to 7x10^-6 m/s, the site demonstrates moderate to low permeability rates, which indicates that on-site stormwater disposal via infiltration may be feasible, but with certain considerations. Infiltration systems such as soak wells or infiltration trenches may be utilized, in accordance with the guidelines set out in Australian Standard AS 3500.3 (Stormwater Drainage**)**, but their design should account for the site's soil conditions to ensure effective stormwater management. It is also to be considered that the permeability constant laboratory values are obtained after compaction of sample to MMDD and may need to replicate the same scenario in field practice.

Careful monitoring and maintenance of these systems will be necessary to prevent issues like clogging or surface water ponding. Additionally, seasonal fluctuations in groundwater levels must be considered, in line with AS 2870-2011 for site classification, to ensure that the infiltration systems remain effective throughout the year. Stormwater is managed efficiently and in compliance with the relevant Australian standards, preventing any adverse effects on the site or surrounding areas.

7Limitation Statement

7.1 Qualifications and Assumptions

The services undertaken by Coffey Testing in preparing this Report were limited to information given by Grounded and have been reported as such.

Except as otherwise stated in the Report and to the extent that statements, opinions, facts, conclusion and/or recommendations in the Report are based in whole or in part on information provided by the Client and other parties identified in the report, those Conclusions are based on assumptions by Coffey testing of the reliability, adequacy, accuracy and completeness of the Information and have not been verified. Coffey Testing accepts no responsibility for the Information.

Coffey Testing has prepared the Report without regard to any special interest of any person other than the Client when undertaking the services described in correspondence or in preparing the Report.

7.2 Use and Reliance

This Report should be read in its entirety and must not be copied, distributed or referred to in part only. The Report must not be reproduced without the written approval of Coffey Testing. Coffey Testing will not be responsible for interpretations or conclusions drawn by the reader. This Report (or sections of the Report) should not be used as part of a specification for a project or for incorporation into any other document without the prior agreement of Coffey Testing.

Coffey testing is not (and will not be) obliged to provide an update of this Report to include any event, circumstance, revised Information or any matter coming to Coffey Testing's attention after the date of this Report. Data reported and Conclusions drawn are based solely on information made available to

Coffey Testing at the time of preparing the Report. The passage of time; unexpected variations in ground conditions; manifestations of latent conditions; or the impact of future events (including (without limitation) changes in policy, legislation, guidelines, scientific knowledge; and changes in interpretation of policy by statutory authorities); may require further investigation or subsequent re- evaluation of the Conclusions.

This Report can only be relied upon for the Permitted Purpose and may not be relied upon for any other purpose. The Report does not purport to recommend or induce a decision to make (or not make) any purchase, disposal, investment, divestment, financial commitment or otherwise. It is the responsibility of the Client to accept (if the Client so chooses) any Conclusions contained within the Report and implement them in an appropriate and suitable manner.

In the absence of express written consent of Coffey testing, no responsibility is accepted by Coffey Testing for the use of the Report in whole or in part by any party other than the Client for any purpose whatsoever. Without the express written consent of Coffey Testing, any use which a third party makes of this Report or any reliance on (or decisions to be made) based on this Report is at the sole risk of those third parties without recourse to Coffey Testing. Third parties should make their own enquiries and obtain independent advice in relation to any matter dealt with or Conclusions expressed in the Report.

7.3 Disclaimer

No warranty, undertaking or guarantee whether expressed or implied, is made with respect to the data reported or the Conclusions drawn. To the fullest extent permitted at law, Coffey Testing, its related bodies corporate and its, employees assume no responsibility and will not be liable to any third party for, or in relation to any losses, damages or expenses (including any indirect, consequential or punitive losses or damages or any amounts for loss of profit, loss of revenue, loss of opportunity to

earn profit, loss of production, loss of contract, increased operational costs, loss of business opportunity, site depredation costs, business interruption or economic loss) of any kind whatsoever, suffered on incurred by a third party.

Amended on 27/6/2025

8. Closure

Coffey Testing thanks Grounded for the opportunity to produce this report and would be more than capable of further testing the project in the construction phase.

Foundation Maintenance and Footing Performance: A Homeowner's Guide

PUBLISHING

BTF 18-2011 replaces Information Sheet 10/91

Buildings can and often do move. This movement can be up, down, lateral or rotational. The fundamental cause of movement in buildings can usually be related to one or more problems in the foundation soil. It is important for the homeowner to identify the soil type in order to ascertain the measures that should be put in place in order to ensure that problems in the foundation soil can be prevented, thus protecting against building movement.

This Building Technology File is designed to identify causes of soil-related building movement, and to suggest methods of prevention of resultant cracking in buildings.

Soil Types

The types of soils usually present under the topsoil in land zoned for residential buildings can be split into two approximate groups – granular and clay. Quite often, foundation soil is a mixture of both types. The general problems associated with soils having granular content are usually caused by erosion. Clay soils are subject to saturation and swell/shrink problems.

Classifications for a given area can generally be obtained by application to the local authority, but these are sometimes unreliable and if there is doubt, a geotechnical report should be commissioned. As most buildings suffering movement problems are founded on clay soils, there is an emphasis on classification of soils according to the amount of swell and shrinkage they experience with variations of water content. The table below is Table 2.1 from AS 2870-2011, the Residential Slab and Footing Code.

Causes of Movement

Settlement due to construction

There are two types of settlement that occur as a result of construction:

- Immediate settlement occurs when a building is first placed on its foundation soil, as a result of compaction of the soil under the weight of the structure. The cohesive quality of clay soil mitigates against this, but granular (particularly sandy) soil is susceptible.
- Consolidation settlement is a feature of clay soil and may take place because of the expulsion of moisture from the soil or because of the soil's lack of resistance to local compressive or shear stresses. This will usually take place during the first few months after construction, but has been known to take many years in exceptional cases.

These problems are the province of the builder and should be taken into consideration as part of the preparation of the site for construction. Building Technology File 19 (BTF 19) deals with these problems.

Erosion

All soils are prone to erosion, but sandy soil is particularly susceptible to being washed away. Even clay with a sand component of say 10% or more can suffer from erosion.

Saturation

This is particularly a problem in clay soils. Saturation creates a bog-like suspension of the soil that causes it to lose virtually all of its bearing capacity. To a lesser degree, sand is affected by saturation because saturated sand may undergo a reduction in volume, particularly imported sand fill for bedding and blinding layers. However, this usually occurs as immediate settlement and should normally be the province of the builder.

Seasonal swelling and shrinkage of soil

All clays react to the presence of water by slowly absorbing it, making the soil increase in volume (see table below). The degree of increase varies considerably between different clays, as does the degree of decrease during the subsequent drying out caused by fair weather periods. Because of the low absorption and expulsion rate, this phenomenon will not usually be noticeable unless there are prolonged rainy or dry periods, usually of weeks or months, depending on the land and soil characteristics.

The swelling of soil creates an upward force on the footings of the building, and shrinkage creates subsidence that takes away the support needed by the footing to retain equilibrium.

Shear failure

This phenomenon occurs when the foundation soil does not have sufficient strength to support the weight of the footing. There are two major post-construction causes:

- Significant load increase.
- Reduction of lateral support of the soil under the footing due to erosion or excavation.

In clay soil, shear failure can be caused by saturation of the soil adjacent to or under the footing.

GENERAL DEFINITIONS OF SITE CLASSES

Class	Foundation
A	Most sand and rock sites with little or no ground movement from moisture changes
S	Slightly reactive clay sites, which may experience only slight ground movement from moisture changes
M	Moderately reactive clay or silt sites, which may experience moderate ground movement from moisture changes
H1	Highly reactive clay sites, which may experience high ground movement from moisture changes
H2	Highly reactive clay sites, which may experience very high ground movement from moisture changes
E	Extremely reactive sites, which may experience extreme ground movement from moisture changes

Notes

1. Where controlled fill has been used, the site may be classified A to E according to the type of fill used.
2. Filled sites. Class P is used for sites which include soft fills, such as clay or silt or loose sands; landslip; mine subsidence; collapsing soils; soil subject to erosion; reactive sites subject to abnormal moisture conditions or sites which cannot be classified otherwise.
3. Where deep-seated moisture changes exist on sites at depths of 3 m or greater, further classification is needed for Classes M to E (M-D, H1-D, H2-D and E-D).

Amended on 27/6/2025

Tree root growth
Trees and shrubs that are allowed to grow in the vicinity of footings can cause foundation soil movement in two ways:

- Roots that grow under footings may increase in cross-sectional size, exerting upward pressure on footings.
- Roots in the vicinity of footings will absorb much of the moisture in the foundation soil, causing shrinkage or subsidence.

Unevenness of Movement

The types of ground movement described above usually occur unevenly throughout the building's foundation soil. Settlement due to construction tends to be uneven because of:

- Differing compaction of foundation soil prior to construction.
- Differing moisture content of foundation soil prior to construction.

Movement due to non-construction causes is usually more uneven still. Erosion can undermine a footing that traverses the flow or can create the conditions for shear failure by eroding soil adjacent to a footing that runs in the same direction as the flow.

Saturation of clay foundation soil may occur where subfloor walls create a dam that makes water pond. It can also occur wherever there is a source of water near footings in clay soil. This leads to a severe reduction in the strength of the soil which may create local shear failure.

Seasonal swelling and shrinkage of clay soil affects the perimeter of the building first, then gradually spreads to the interior. The swelling process will usually begin at the uphill extreme of the building, or on the weather side where the land is flat. Swelling gradually reaches the interior soil as absorption continues. Shrinkage usually begins where the sun's heat is greatest.

Effects of Uneven Soil Movement on Structures

Erosion and saturation
Erosion removes the support from under footings, tending to create subsidence of the part of the structure under which it occurs. Brickwork walls will resist the stress created by this removal of support by bridging the gap or cantilevering until the bricks or the mortar bedding fail. Older masonry has little resistance. Evidence of failure varies according to circumstances and symptoms may include:

- Step cracking in the mortar beds in the body of the wall or above/below openings such as doors or windows.
- Vertical cracking in the bricks (usually but not necessarily in line with the vertical beds or perpends).

Isolated piers affected by erosion or saturation of foundations will eventually lose contact with the bearers they support and may tilt or fall over. The floors that have lost this support will become bouncy, sometimes rattling ornaments etc.

Seasonal swelling/shrinkage in clay
Swelling foundation soil due to rainy periods first lifts the most exposed extremities of the footing system, then the remainder of the perimeter footings while gradually permeating inside the building footprint to lift internal footings. This swelling first tends to create a dish effect, because the external footings are pushed higher than the internal ones.

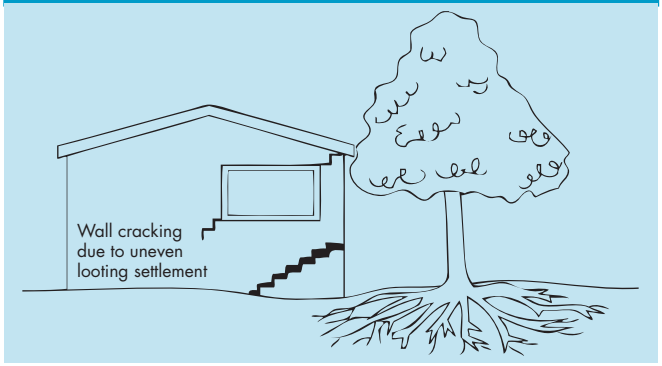
The first noticeable symptom may be that the floor appears slightly dished. This is often accompanied by some doors binding on the floor or the door head, together with some cracking of cornice mitres. In buildings with timber flooring supported by bearers and joists, the floor can be bouncy. Externally there may be visible dishing of the hip or ridge lines.

As the moisture absorption process completes its journey to the innermost areas of the building, the internal footings will rise. If the spread of moisture is roughly even, it may be that the symptoms will temporarily disappear, but it is more likely that swelling will be uneven, creating a difference rather than a disappearance in symptoms. In buildings with timber flooring supported by bearers and joists, the isolated piers will rise more easily than the strip footings or piers under walls, creating noticeable doming of flooring.

As the weather pattern changes and the soil begins to dry out, the external footings will be first affected, beginning with the locations where the sun's effect is strongest. This has the effect of lowering the external footings. The doming is accentuated and cracking reduces or disappears where it occurred because of dishing, but other cracks open up. The roof lines may become convex.

Doming and dishing are also affected by weather in other ways. In areas where warm, wet summers and cooler dry winters prevail, water migration tends to be toward the interior and doming will be accentuated, whereas where summers are dry and winters are cold and wet, migration tends to be toward the exterior and the underlying propensity is toward dishing.

Trees can cause shrinkage and damage



Movement caused by tree roots
In general, growing roots will exert an upward pressure on footings, whereas soil subject to drying because of tree or shrub roots will tend to remove support from under footings by inducing shrinkage.

Complications caused by the structure itself
Most forces that the soil causes to be exerted on structures are vertical – i.e. either up or down. However, because these forces are seldom spread evenly around the footings, and because the building resists uneven movement because of its rigidity, forces are exerted from one part of the building to another. The net result of all these forces is usually rotational. This resultant force often complicates the diagnosis because the visible symptoms do not simply reflect the original cause. A common symptom is binding of doors on the vertical member of the frame.

Effects on full masonry structures
Brickwork will resist cracking where it can. It will attempt to span areas that lose support because of subsided foundations or raised points. It is therefore usual to see cracking at weak points, such as openings for windows or doors.

In the event of construction settlement, cracking will usually remain unchanged after the process of settlement has ceased.

With local shear or erosion, cracking will usually continue to develop until the original cause has been remedied, or until the subsidence has completely neutralised the affected portion of footing and the structure has stabilised on other footings that remain effective.

In the case of swell/shrink effects, the brickwork will in some cases return to its original position after completion of a cycle, however it is more likely that the rotational effect will not be exactly reversed, and it is also usual that brickwork will settle in its new position and will resist the forces trying to return it to its original position. This means that in a case where swelling takes place after construction and cracking occurs, the cracking is likely to at least partly remain after the shrink segment of the cycle is complete. Thus, each time the cycle is repeated, the likelihood is that the cracking will become wider until the sections of brickwork become virtually independent.

With repeated cycles, once the cracking is established, if there is no other complication, it is normal for the incidence of cracking to stabilise, as the building has the articulation it needs to cope with the problem. This is by no means always the case, however, and monitoring of cracks in walls and floors should always be treated seriously.

Upheaval caused by growth of tree roots under footings is not a simple vertical shear stress. There is a tendency for the root to also exert lateral forces that attempt to separate sections of brickwork after initial cracking has occurred.

EMERGEN

1 OVERVIEW

EMERGEN has developed a sustainable design report on the proposed development at Lot 51 Kennedy Street, Port Hedland WA in consultation with SHRA Pty Ltd. The development comprises of the following areas.

- 62x Four-Bedroom Module (248 Rooms) – Class 1b
- 2x UA Bedroom Module (4 Rooms) – Class 1b
- 15x Three-Bedroom Module (Residential, 45 Rooms) – Class 1a
- Administration Building – Class 5/6
- Recreation Facilities – Class 9b
- Gymnasium – Class 9b
- Dining Hall – Class 6
- Maintenance Shed – Class 8
- 4x Laundry Module– Class 10a
- Swimming Pool – Class 10b (Open Space)
- Bus Shelter – Class 10a (Open Space)

The purpose of this report is to support the development application by identifying the principles incorporated in the design and future integration of initiatives that meet sustainable objectives and targets for the site.

1.1 STATE PLANNING POLICY SUMMARY

EMERGEN (a division of CADDS GROUP), in collaboration with the design team (SHRA Pty Ltd) has developed a sustainable design strategy aligning with *State Planning Policy 7.0* and *Town of Port Hedland*, which focuses on the Design of the Built Environment - specifically, Principle 5: Sustainability.

This report serves the vital purpose of bolstering the development application by articulating the sustainability principles and commitments for the project site. We acknowledge the significance of State Planning Policy 7.0 in promoting sustainability within the built environment. Good design, as outlined in the policy, is not only about aesthetics but also optimises the sustainability of our built surroundings, yielding positive outcomes on environmental, social, and economic fronts.

Our approach to sustainable landscape and urban design adheres closely to the established water-sensitive urban design principles, ensuring minimal adverse impacts on existing natural features and ecological processes while promoting green infrastructure at all scales of the project. Furthermore, our strategy for sustainable built environments embraces passive environmental design measures tailored to local climate and site conditions. This includes careful consideration of optimal orientation, shading, building envelope, and natural ventilation, ultimately reducing reliance on energy-intensive heating and cooling technologies. This, in turn, results in reduced energy consumption, decreased resource usage, and lowered operating costs throughout the project's lifecycle.

1.2 DESIGN AND CONSTRUCT TO AUSTRALIAN BEST PRACTICE

The design team will utilise a structured approach to a sustainable outcome for the design and construction of the development including the following Sustainable Targets.

Table 1: Sustainability Targets

DESCRIPTION	GOAL	SUSTAINABILITY COMMITMENTS
CLEAR AIR	Improve indoor environment quality and health and wellbeing of occupants.	Outdoor air provided to primary areas at a rate at least **50%** greater than minimum in AS 1668.2:2012. *(TBC based on mechanical consultant).*
LIGHT QUALITY		Above **40%** of the regularly occupied areas have high level of daylight (above 160 Lux).
EXPOSURE TO TOXINS		The building's paints adhesives and sealants are low in TVOC or non-toxic. The building's engineered wood products are low in TVOC or non-toxic. Occupants are not exposed to banned or highly toxic materials in the building.
NATURAL VENTILATION	Increase Fresh Air	Natural ventilation will be provided to all buildings through openable windows, with mechanical systems added where required. *(mechanical consultant to advise).*
HEAT RESILIENCE	Reduce impacts of long-term performance.	Light Roof Colour (3-year SRI ≥ 0.64)
ENERGY USE	Reduce emissions and water use.	JV3 Pathway - A minimum of **10%** offset in operational energy usage pathway NatHERS Pathway - All dwellings exceed the minimum NatHERS energy efficiency requirement by 0.5 stars, based on the NCC 2022
		Future provision for solar PV array to supply renewable energy on the roof of Dry & Wet Mess and Administration, recreation and gymnasium building to offset AC consumption
WATER USE		High WELS Ratings (these equal to above **30%** reduction in potable water). Water Sensitive Urban Design, drip irrigation.
LIGHTING USE		**20%** reduction in lighting power when compared to NCC DTS.
MOVEMENT AND PLACE	Low carbon options.	Future provision for 2 EV Charging Bays. Provision for Bike Storage racks. Provision for Public Transport Loop and available public transport within 100m of the site.

2 PROJECT INFORMATION

The proposed project is located on previously developed land at Lot 51 Kennedy Street, Port Hedland WA. The project aims to revitalise the existing lot, with the objective of redeveloping the site into an accommodation village complete with essential amenities to enhance functionality and appeal.

Figure 1: Existing Site Image/ Proposed Development

3 ENERGY REDUCTION STRATEGY

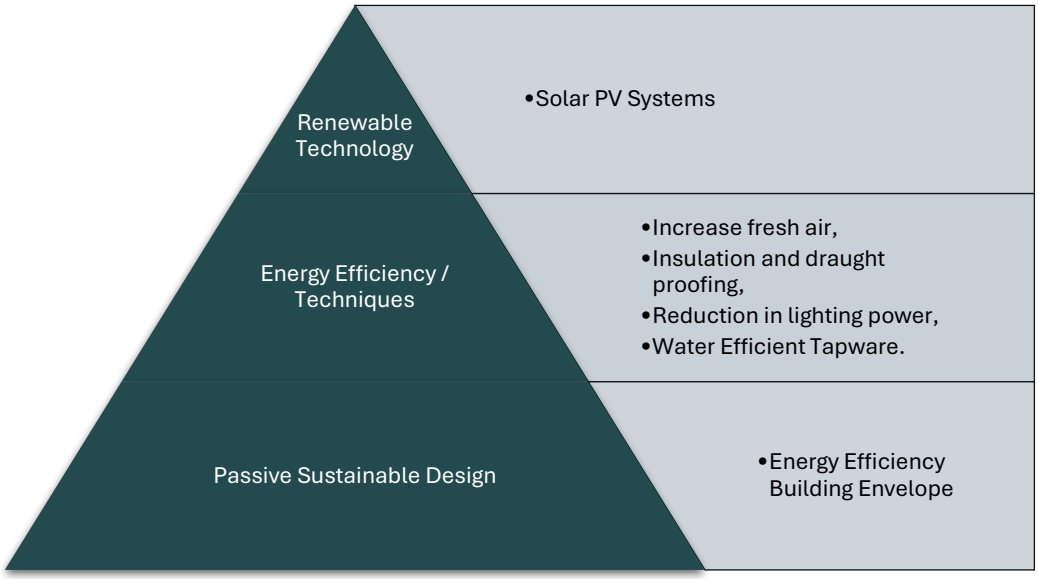

Figure 2: Energy Reduction Strategy

4 LIGHTING COMFORT

Lighting within the building must meet the following criteria:

- All lighting must be flicker-free.
- Light sources must have a minimum Colour Rendering Index (CRI) average R1 to R8 of 85 or higher and have a CRI R9 of 50 or higher.
- Light sources must meet best practice illuminance levels for each task within each space type with a maintained illuminance that meets the levels recommended in AS/NZS 1680.1:2006 series applicable to the project type and including maintenance.
- The maintained Illuminance values must achieve a uniformity of no less than that specified in Table 3.2 of AS/NZS 1680.1:2006, with a maintenance factor method as defined in AS/NZS 1680.4.; and
- All light sources must have a minimum of 3 MacAdam Ellipses.
- The walls within the field of view of occupants in regularly occupied spaces must have an average surface reflectance value of 0.70 and an average surface illuminance of at least 50% of the horizontal illuminance levels required for task.
- Vertical illuminance in workspaces: ensure that 50% of the horizontal task illuminance reaches the average eye height for 90% of primary spaces using vertical illuminance calculation grid.
- The illuminance values must be calculated in accordance with AS/NZS 1680 series for the relevant task.

4.1 EFFICIENT LIGHTING AND CONTROL

The installed aggregate illumination power has been designed to be **20%** below the maximum illumination power based on maximum allowable lighting power densities defined in Table J7D3a of the NCC 2022. Motion Detectors and daylight sensors are provided to reduce demand.

Table 2: Lighting Characteristics

PARAMETER	PROPOSED BUILDING	REFERENCE BUILDING
LIGHTING TYPE	LED light fittings	LED light fittings
DESIGN ILLUMINANCE (LUX)	Various lux	Various lux
NOMINAL LIGHTING POWER DENSITY (W/M^2)	**20%** less compared to NCC max requirements.	As per NCC max requirements.
OCCUPANT SENSOR CONTROLS	Motion sensors	N/A
DAYLIGHT CONTROLS	Yes	N/A
OTHER LIGHTING CONTROLS	Timer switches	N/A
ADJUSTMENT FACTOR APPLIED	0.9 – Motion sensor 1 0.7 – Motion sensor 2 0.55 – Motion sensor 3	Room Aspect Ratio

4.2 ARTIFICIAL LIGHTING AND CONTROLS

All lighting will be equipped with light-emitting diodes (LEDs), covering all primary areas. Common area lighting will include controls like occupancy sensors (PIRs) and time switches to minimize energy usage when lighting is not needed.

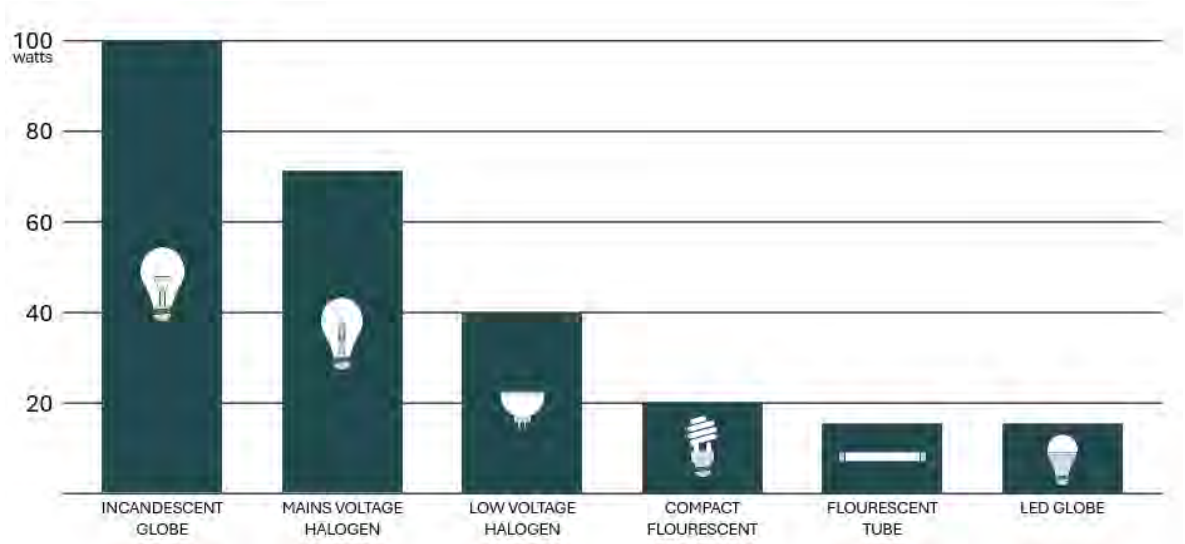

Figure 3: Comparison of LED lighting with other conventional lighting

4.3 DAYLIGHTING

Emergen has completed preliminary daylight modelling using IES software at finished floor level, based on the CIE standard overcast sky. The analysis focuses on primary spaces (areas that are regularly occupied).

To meet high daylighting standards, industry best practice typically requires that at least 60% of the combined living and bedroom area in each unit meets the daylight requirements. Additionally, daylight levels must be present in at least 20% of the area of each bedroom and living area. For non-residential buildings, at least 40% of the regularly occupied areas across the building must receive high levels of daylight with no less than 20% on any floor or tenancy (whichever is smaller). These thresholds align with commonly accepted standards for daylighting compliance

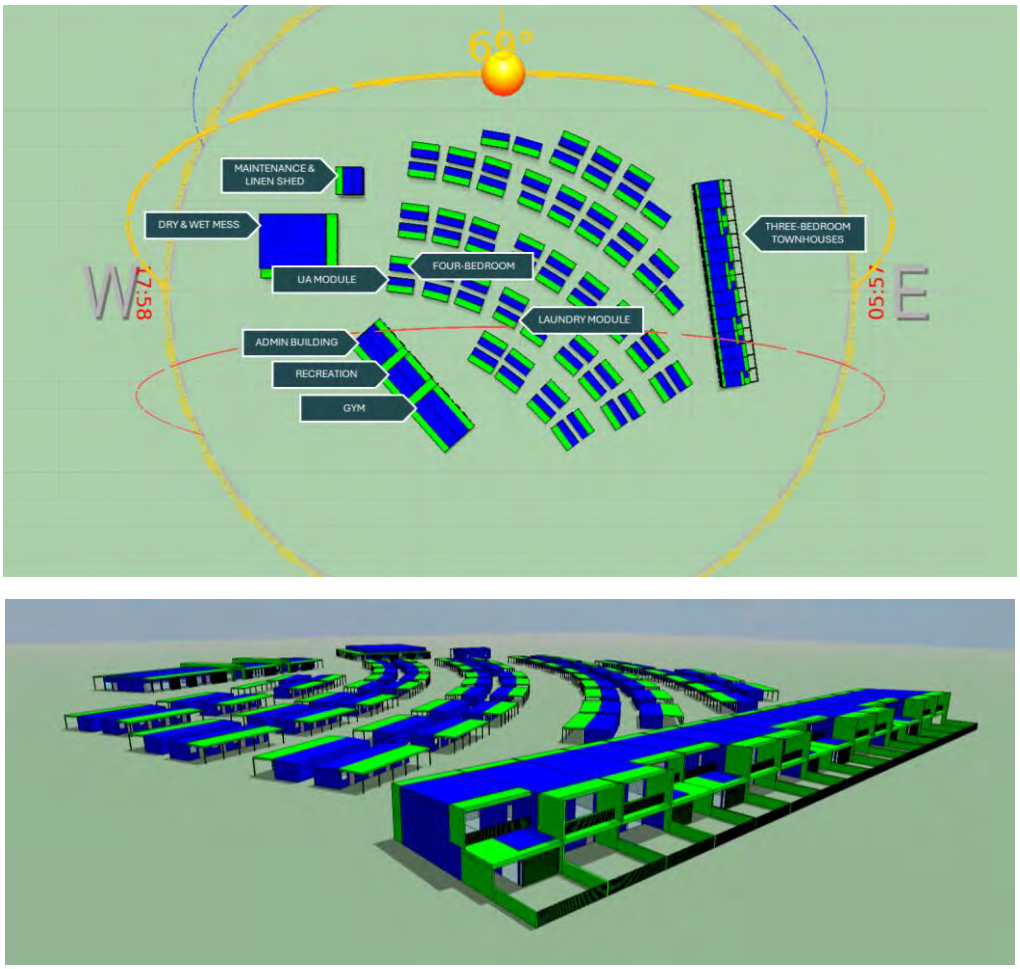

Figure 4: Daylighting Model on IESve Software

Table 3: Calculations Conditions - Daylight

CALCULATION CONDITIONS	
TEST FACTOR	Daylight Factor
SKY FACTOR	CIE Overcast Sky
DATE	September 21st 12:00pm

4.3.1 FOUR BEDROOM MODULE (CLASS 1B)

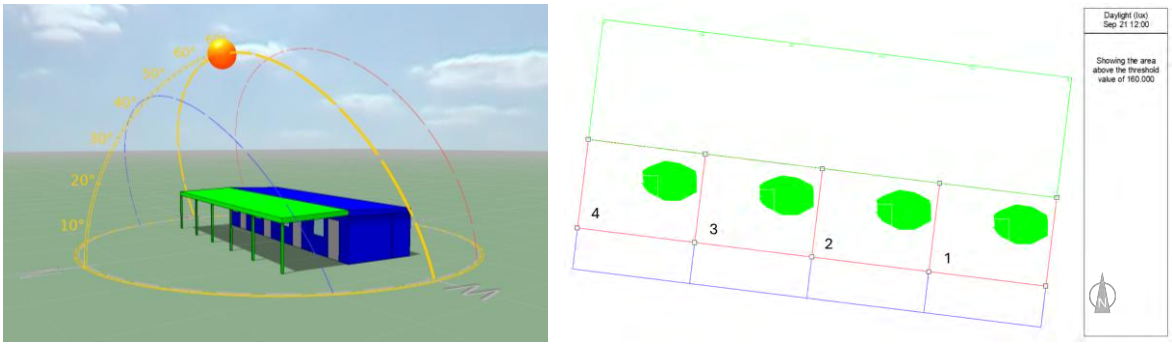

Figure 5: Daylighting for Typical 4x Bedroom Module

Table 4: Daylighting Results for Typical 4x Bedroom Module

BUILDING	PROPOSE USAGE	NOMINATED AREA (m^2)	COMPLIANT AREA (m^2)	COMPLIANT PERCENTAGE (%)
Room 1	Primary Areas (Bedroom)	10.43	1.70	**16.30**
Room 2		10.43	1.70	**16.30**
Room 3		10.43	1.70	**16.30**
Room 4		10.43	1.70	**16.30**

WINDOW SPECIFICATION		U-VALUE	SHGC (±5%)
EXTERNAL GLAZING	Single Low-E glazing in aluminium frame with cyclonic rated stainless steel mesh screen.	**4.6**	**0.29**

Note: The drop in daylight compliance is primarily due to the lower SHGC of the new glazing, the addition of the mesh screen, and the Low-E coating, all of which restrict the amount of natural light entering the space. While these changes improve thermal performance and shading control, they negatively impact daylighting.

4.3.2 UA BEDROOM MODULE (CLASS 1B)

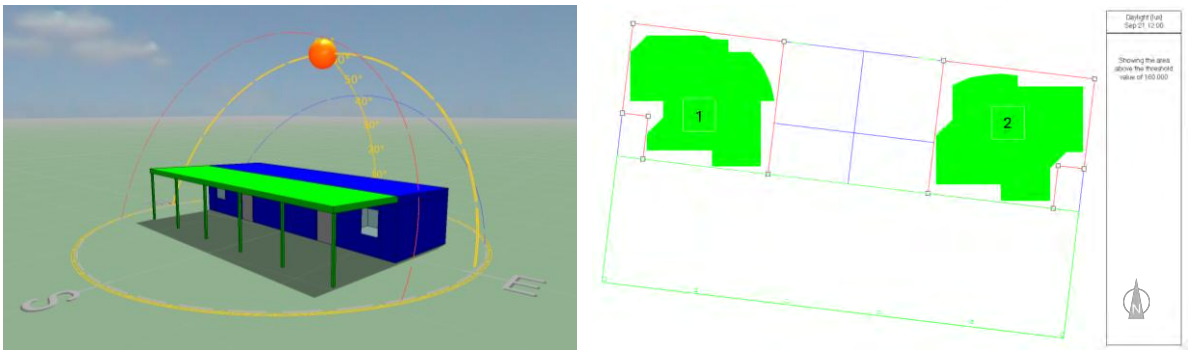

Figure 6: Daylighting for UA Bedroom Module

4.4 SOLAR ANALYSIS

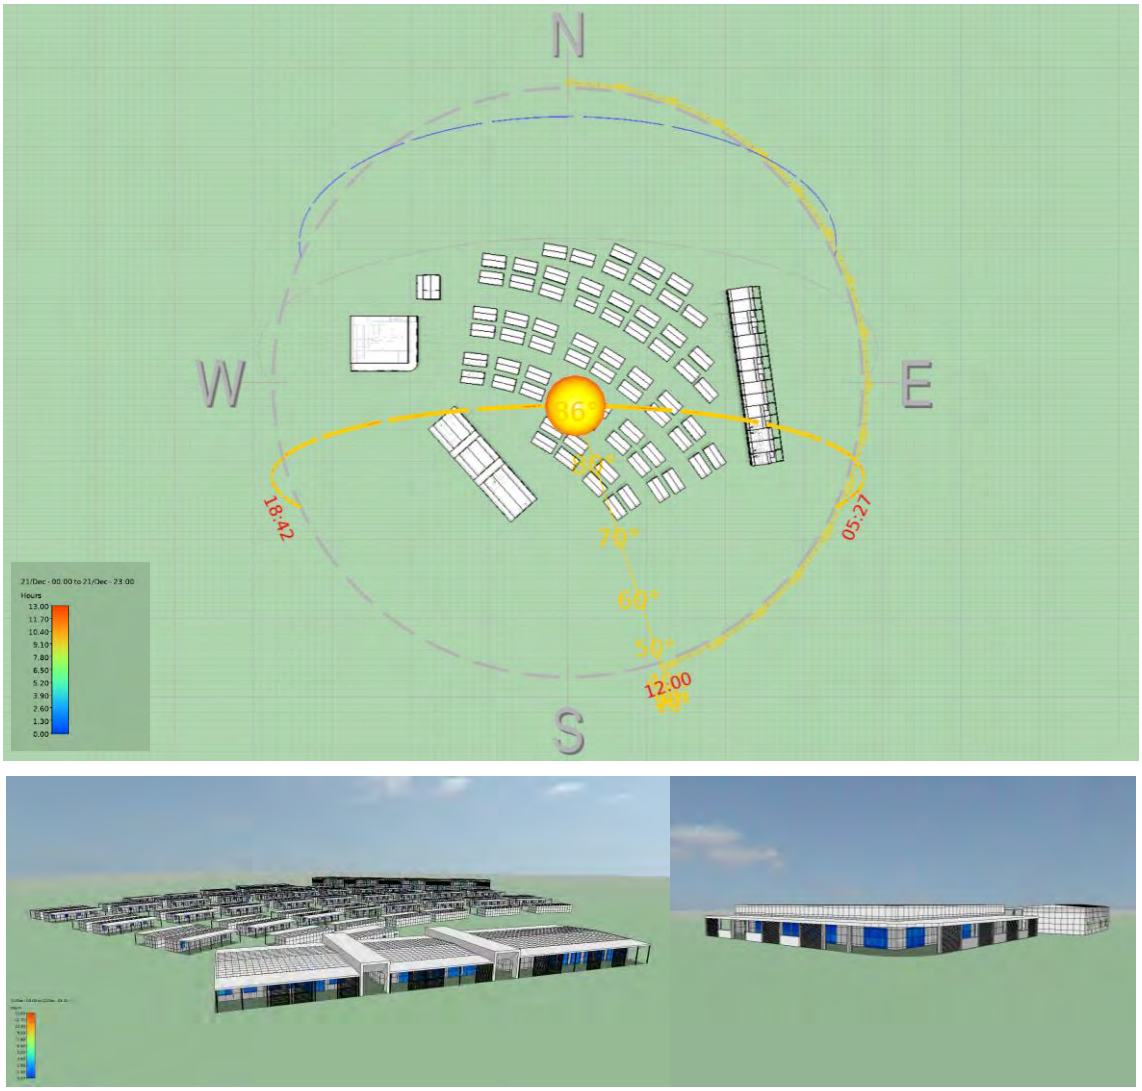

Figure 12: Solar Analysis during Summer

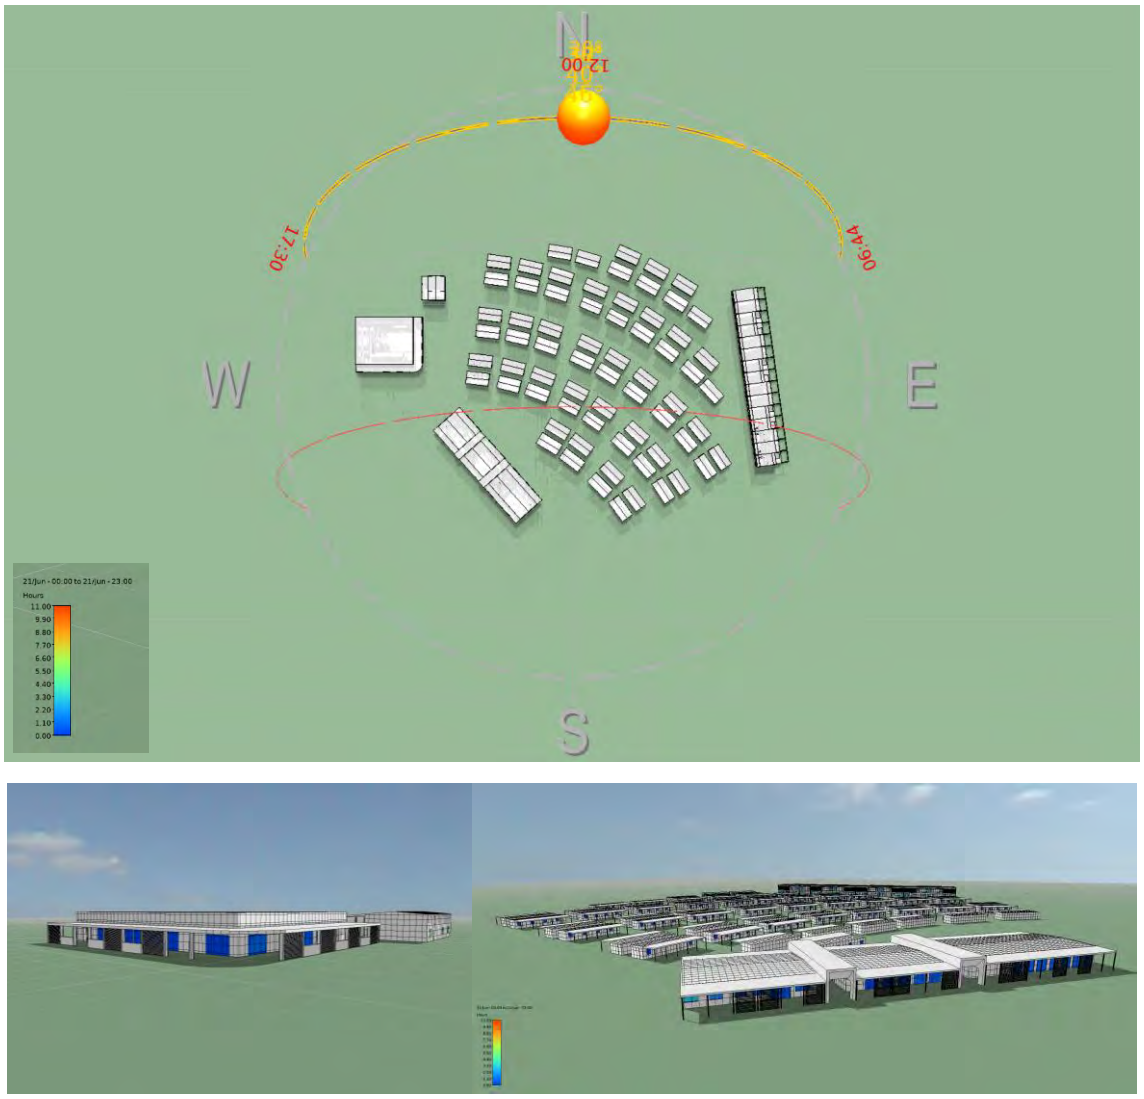

Figure 13: Solar Analysis during Winter

The shading elements have been strategically designed to minimise extended solar exposure during summer months yet maximise solar gains in winter months. During the Summer months each window, receives approximately 1 to 5 hours of daylight over the course of the day, striking a balance between harnessing natural light and mitigating excessive sunlight exposure.

Please note that residents will generally not occupy the village between 6:00 am and 6:00 pm unless on night shift. During these hours, only operational staff—such as kitchen, administration, maintenance, and groundskeeping personnel—will be present on-site. However, the assessment is based on the NCC 2022 occupancy profiles, which express occupancy as a percentage of the maximum number of people that can be accommodated in the building. This approach ensures compliance with the NCC's energy efficiency requirements, as detailed in Specification 35 of the NCC 2022 Volume One.

5 HEALTH AND WELLBEING

Through the enhancement of indoor environment quality, occupants will see improvements to health along with benefits to thermal and visual comfort resulting in a more inviting and liveable internal environment.

5.1 PLACES FOR PEOPLE

The project promotes social sustainability by incorporating spaces designed for community interaction. The amenities within the village offer residents opportunities to socialize and build connections. The current design of the communal area responds to microclimate and site conditions with access to sun in winter.

Figure 14: Amenities/ Communal Area inside the Village

5.2 PROVISIONS FOR INCREASED OUTDOOR AIR

Pollutants entering the building are minimized, and a high level of fresh air is provided to maintain indoor pollutant levels within acceptable limits. Outdoor air supplied to primary areas is proposed to be at least **50% greater** than the minimum requirements outlined in **AS 1668.2:2012**, subject to confirmation by the mechanical engineer.

This is typically achieved through **window openability** and **cross-ventilation**. If mechanical systems are required, the team will consider options such as:

- **Dedicated Outdoor Air Systems (DOAS)** with dehumidification
- **Energy Recovery Ventilation (ERV)** systems
- **Demand Control Ventilation (DCV)** with air quality sensors

The most suitable option will be confirmed in consultation with the mechanical engineer.

6 LAND USE AND ECOLOGY

6.1 HEAT ISLAND EFFECT

The project will dedicate more than 75% of the entire site area to include one or a combination of the following:

- Vegetation.
- Roofing materials, including shading structures, having the following:
    - For roof pitched <15°– a three-year SRI of minimum 64; or
    - For roof pitched >15°– a three-year SRI of minimum 34.
- Only where the three-year Solar Reflectance Index (SRI) for products is not available, use the following:
    - For roof pitched <15° – an initial SRI of minimum 82; or
    - For roof pitched >15° – an initial SRI of minimum 39.
- Unshaded hard-scaping elements with a three-year SRI of minimum 34 or an initial SRI of minimum 39.
- Hardscaping elements shaded by overhanging vegetation or roof structures (such as verandas providing shade to pedestrian walkways).

Figure 15: Potential design provisions for Heat Island Effect

7 ENERGY USE

Energy savings in a building can be realized by minimizing the need for heating and cooling through a well-designed and insulated façade. The design team will focus on enhancing energy efficiency by exceeding the minimum requirements of BCA Section J. This will involve optimizing the building envelope, air conditioning and ventilation systems, and lighting to ensure lower energy consumption.

7.1 RENEWABLE ENERGY

Provisions for Solar Photovoltaic (PV) systems have been incorporated into the proposed building design at this early stage to help further reduce greenhouse gas emissions and offset overall grid energy consumption.

The design team has ensured that both structural and electrical requirements are accounted for to facilitate the future installation of a solar PV system on the roofs of the Dining Hall and Administration, Recreation, and Gymnasium Buildings. This system will help reduce power consumption, particularly from air conditioners during the day. The plan is to install the solar system within two years of the building's operational start.

Solar lighting is planned for installation to every pedestrian walkway, carpark and roadway.

Note: Glazing values provided are for Whole System (Frame + Glass)

8 WATER EFFICIENCY

8.1 SUSTAINABLE WATER INITIATIVES

Non-potable water use is minimal throughout the proposed design due to the application of water efficient toilets, taps and showers and relatively small areas of irrigated plantings. The design team has identified water capture, grey and black water capture and treatment during the target setting workshop but did not preference these options due to:

- Logistical constraints, energy use and operational costs associated with grey and black water treatment in multi-residential complexes influenced heavily by health regulations (significant periodic inspection and testing required in multiple dwellings applications)
- Potential high level of risk associated with water re-use systems to health and safety of residents.
- Relative cost vs benefit of these strategies versus competing strategies which delivered much larger environmental benefits at a lower cost.

All new water fixtures are to ensure that high WELS rating fixtures and fitting are to be specified in line with minimum benchmarks below.

Table 29: WELS Ratings

FIXTURE / EQUIPMENT TYPE	WELS RATING	MINIMUM WATER EFFICIENCY
TAPS	5 Star	3L/Min
TOILETS	5 Star	3.5L/Flush
SHOWERS	3 Star	6.5L/Min
WASHING MACHINE	4 Stars	
DISHWASHERS	5 Stars	

8.2 WATER EFFICIENT LANDSCAPING

The development's location in Port Hedland, Western Australia which is considered a drying climate and as such, water conservation is critically important. The following sections set out design strategies utilised for this development to reduce its overall water consumption.

- **Drip Irrigation System**: Efficient drip irrigation system with bubblers ensuring optimal water delivery to trees and uniform hydration throughout the landscape.
- **Plant Selection**: Drought-tolerant and water-wise plants will be selected wherever possible to ensure sustainable water use.
- **Vegetation and Landscaping:** Native vegetation that is water-wise will be prioritized.
- **Car Park Design:** The car park will incorporate shade trees and paved asphalt. The design will include traditional kerbs.

9 MOVEMENT AND PLACE

9.1 BICYLCE PARKING FACILITIES & SUSTAINABLE TRANSPORT FACILITIES

The intention of this category is to reduce occupants' reliance on carbon-intensive vehicles. To support this, the development will include infrastructure that facilitates the future installation of electric vehicle (EV) charging stations. Additionally, secure bike storage will be provided to encourage cycling as a sustainable mode of transportation. Furthermore, the development will support shared transportation options, offering staff convenient pick-up and drop-off services to centralized locations and nearby public transportation hubs. These initiatives aim to promote greener, more efficient commuting alternatives.

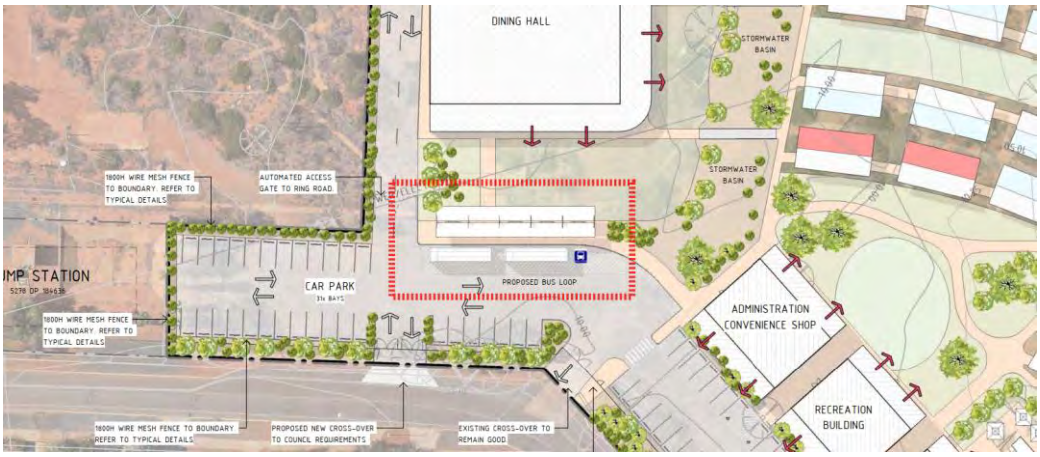

Figure 16: Proposed Provision for Public Transportation Loop

9.2 ENCOURAGING WALKABILITY

The building's location is within an existing residential area, and approximately 2kms from the South Hedland Town centre. Based on the walkability score of 45, It is not a highly walkable location, with most errands requiring a car. However, the introduction of shared transportation or shuttle services to nearby public transportation hubs and centralised locations will provide a convenient travel option, making it easier for people to access the village and surrounding areas.

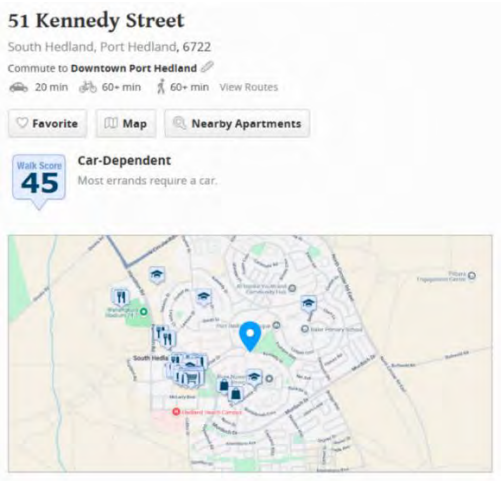

Figure 17: Walkability score of the Site

10 WASTE EFFICIENCY

A waste planning expert will produce a Waste Management Plan (OWMP) that addresses best practice in waste management, including:

- Identifying the objectives of the plan, by setting diversion from landfill targets and / or target for reducing total materials generation (general waste materials + recyclable / reusable materials);
- Clearly identify waste streams including general waste, paper and cardboard, glass and plastic;
- Clearly identify applicable bins for various waste streams, that allow for separation of recyclable streams – or use of comingled systems where appropriate.
- Clearly identify at least one other waste stream that can be recycled, and for which recycling facilities are provided.
- Clearly identify storage areas for all waste streams identified in the OWMP.
    - Area to be sized sufficiently for all streams nominated above, based on waste generated by the project and the collection frequency for each stream; and
    - Calculations shall be based on third-party best practice guidelines.
- Outline best practice access requirements for the collection of all waste streams identified in the OWMP.
- Outline individual roles responsible for delivering and reviewing the OWMP
- The South Hedland Landfill Facility is located within 7mins from site accepts various materials for recycling.

11 EXPOSURE TO TOXINS

11.1 PAINTS, ADHESIVES, AND SEALANTS

To meet the requirements, at least 95% of internally applied paints, adhesives, sealants (by volume), and carpets (by area) must meet TVOC (Total Volatile Organic Compounds) limits. Compliance with these limits can be achieved through one of the following methods:

1. Product Certification Scheme: The contractor can use products that are certified under a recognized and current Product Certification Scheme at the time of purchase. These schemes assess and verify the TVOC content of the materials, ensuring they meet the specified limits.
2. Laboratory Product Testing: If there are no certified products available, the contractor can conduct laboratory testing on the paints, adhesives, and sealants, to determine their TVOC content. The testing should be carried out using the whole paint, including water and tinters, to obtain accurate results.
3. Absence of Non-compliant Materials: Alternatively, if none of the materials mentioned (paints, adhesives, sealants, and carpets) are present at the time of practical completion (PC), and thus no TVOC emissions are expected, compliance can be achieved.

All paints used for internal application on the job are to have a low TVOC content as outlined below. TVOC content must be based on whole paint (water and tinters included):

Table 30: Paint VOC limits

PRODUCT TYPE / SUBCATEGORY	MAX TVOC CONTENT (G/L OF READY TO USE PRODUCT)
Walls and ceilings – Any gloss level	16
Trim, varnishes and wood stains	75
Primers, sealers and prep coats	65

Maximum TVOC Content Limits for Paints, Varnishes and Protective Coatings
*EU Directive
The TVOC content of the 'ready-to-use' paint shall be theoretically calculated as the sum total of the VOCs of each of the raw material component comprising the paint.

Where the TVOC content of individual components is not known, it must be determined experimentally by one of the following testing methods as appropriate:

- ISO Method 17895 (2005), for a material with a presumed VOC content <1%;
- ISO Method 11890-2 (2006), for a material with a presumed VOC <15%;
- ISO Method 11890-1 (2007), for a material with a presumed VOC content >15%;
- ASTM D3960, which is comprised of four individual testing procedures that measures TVOC (D2369) as well as density (D1475) and water content (D4017). Exempt compounds (D4457) must not be subtracted in the calculation of VOC content.

The contractor must obtain written approval from the design team before using any sealant, adhesive, paint, flooring or fit out items. This approval will be contingent on the provision of proof that the product has a VOC content below that noted above.

At the end of construction, the contractor is required to undertake a final audit to ensure that the correct products have been used.

All sealants used in an internal application on the job are to have a low TVOC content as outlined below.

Table 31: Adhesives/Sealants VOC limits

PRODUCT	MAXIMUM TVOC CONTENT (G/LITRE)
General purpose adhesives and sealants	50
Acoustic sealants, architectural sealant, waterproofing membranes and sealant, fire retardant sealants and adhesives	250
Structural glazing adhesive, wood flooring and laminate adhesives and sealants	100
Primers, sealers and prep coats	65
One and two pack performance coatings for floors	140

Maximum TVOC limits for Adhesives & Sealants
*Sealants used to enhance the fire- and water-proofing properties are included.

The testing method applicable to adhesive and sealants is only ASTM D3960 as detailed above for paints. For more information on ASTM D3960 refer to South Coast Air Quality Management District Rule 1168.

At the end of construction, the contractor is required to undertake a final audit to ensure that the correct products have been used.

All carpets and/or other flooring used on the project are to have low TVOC emission rates as outlined below.

Table 32: Carpet VOC limits

ALL CARPET/FLOORING PRODUCTS MUST COMPLY WITH TVOC EMISSION LEVELS	
Total VOC limit	0.5 mg/m^2 per hour
4-pc (4-Phenolcycohexene) limit	0.05 mg/m^2 per hour

Compliance Testing: Refer to Carpet and Rug Institute Green Label (US) OR American Society for Testing and Materials (ASTM) D5116 Guide for Small-Scale Environmental Chamber Determinations of Organic Emissions from Indoor Material/Products OR

For laminate floor coverings, an option for demonstrating compliance with TVOC levels is as follows: ISO 10580 (also known as ISO/TC 219) – Document N238 – Resilient,

Textile and Laminate Floor Coverings Evaluation of Volatile Organic Compounds Emissions, with a limit of 500µg/m^2/hr at 24 hours. OR

For floor coverings (other than carpet), an option for demonstrating compliance with TVOC levels is as follows:

ISO16000 parts 9, 10 and 11 (also known as the EN 13419), with a TVOC limit at three days of 5mg/m^2/h and 0.5mg/m^2/h at 28 days.

At the end of construction, the contractor is required to undertake a final audit to ensure that the correct products have been used.

Table 33: Flooring VOC limits

ALL CARPET/FLOORING PRODUCTS MUST COMPLY WITH TVOC EMISSION LEVELS – TO ASTM D5116 TEST PROTOCOL	
Carpets using ASTM D5116 Test Protocol:	
Total VOC limit	0.5 mg/m^2 per hour
4-pc (4-Phenolcycohexene) limit	0.05 mg/m^2 per hour
Carpet using ISO 16000 test protocol (also known as EN 13419)	
TVOC at three days-	0.5 mg/sqm per hour
Flooring using ISO 10580 (also known as ISO/TC 219) – Document	
TVOC at 24 hours - 0	0.5mg/sqm per hour

11.2 FORMALDEHYDE MINIMISATION

All engineered wood products used internally, including exposed and concealed applications, must have low formaldehyde emissions as defined in the table below, or contain no formaldehyde. Engineered wood products are defined as particleboard, plywood, veneer, MDF, Laminated Veneer Lumber (LVL), High-Pressure Laminate (HPL), Compact Laminate and decorative overlaid wood panels and include both finished and unfinished products.

These requirements are not applicable to exterior applications, formwork, reused engineered wood products or raw timber.

The contractor must obtain approval from the design team before substituting any product.

The limits listed here are defined according to the test method. The levels listed are equivalent results for different test procedures.

Table 34: Formaldehyde emission limits

TEST PROTOCOL	EMISSION LIMIT/ UNIT OF MEASUREMENTS
AS/NZS 2269:2004, testing procedure AS/NZS 2098.11:2005 method 10 for Plywood	< 1.0 mg/L
AS/NZS 1859.1:2004 - Particle Board, with use of testing procedure AS/NZS 4266.16:2004 method 16	< 1.5 mg/L
AS/NZS 1859.2:2004 - MDF, with use of testing procedure AS/NZS 4266.16:2004 method 16	< 1.0 mg/L
JIS A 5908:2003- Particle Board and Plywood, with use of testing procedure JIS A 1460	< 1.0 mg/L
JIS A 5905:2003 - MDF, with use of testing procedure JIS A 1460	< 1.0 mg/L
JIS A1901 (not applicable to Plywood)	< 1.0 mg/L
ASTM D5116	<0.1 (+/- 0.0005) mg/m^{2}hr (may also be represented as mg/m^2/hr)
ISO 16000 part 9, 10 and 11 (also known as EN 13419)	<0.1 (+/- 0.0005) mg/m^{2}hr (may also be represented as mg/m^2/hr)
ASTM D6007	0.12mg/m^3*
ASTM E1333	0.12mg/m^3**
EN 717-1 (also known as DIN EN 717-1)	0.12 mg/m^3
EN 717-2 (also known as DIN EN 717-2)	3.5 mg/m^{2}hr (may also be represented as mg/m^2/hr).
*The test report must confirm that the conditions of Table 1 comply for the particular wood product type, the final results must be presented in EN 717-1 equivalent (as presented in the table) using the correlation ratio of 0.98. ** The final results must be presented in EN 717-1 equivalent (as presented in the table), using the correlation ratio of 0.98.	

12 CONCLUSION

In conclusion, the presented report provides a comprehensive overview of sustainability commitments that harmonise seamlessly with the core principles of the sustainability philosophy. These initiatives centre around the critical areas of energy conservation, water conservation, and waste reduction, showcasing a concerted effort to create a more environmentally responsible and resource-efficient approach. By prioritising these fundamental aspects, the report underscores a commitment to fostering a greener and more sustainable future.

Table 35: Sustainability Commitments

DESCRIPTION	GOAL	SUSTAINABILITY COMMITMENTS
CLEAR AIR	Improve indoor environment quality and health and wellbeing of occupants.	Outdoor air provided to primary areas at a rate at least **50%** greater than minimum in AS 1668.2:2012. *(TBC based on mechanical consultant).*
LIGHT QUALITY		Above **40%** of the regularly occupied areas have high level of daylight (above 160 Lux).
EXPOSURE TO TOXINS		The building's paints adhesives and sealants are low in TVOC or non-toxic. The building's engineered wood products are low in TVOC or non-toxic. Occupants are not exposed to banned or highly toxic materials in the building.
NATURAL VENTILATION	Increase Fresh Air	Natural ventilation will be provided to all buildings through openable windows, with mechanical systems added where required. *(mechanical consultant to advise).*
HEAT RESILIENCE	Reduce impacts of long-term performance.	Light Roof Colour (3-year SRI ≥ 0.64)
ENERGY USE	Reduce emissions and water use.	JV3 Pathway - A minimum of **10%** offset in operational energy usage pathway NatHERS Pathway - All dwellings exceed the minimum NatHERS energy efficiency requirement by 0.5 stars, based on the NCC 2022
		Future provision for solar PV array to supply renewable energy on the roof of Dining Hall and Administration, recreation and gymnasium building to offset AC consumption
WATER USE		High WELS Ratings (these equal to above **30%** reduction in potable water). Water Sensitive Urban Design, drip irrigation.
LIGHTING USE		**20%** reduction in lighting power when compared to NCC DTS.

MOVEMENT AND PLACE	Low carbon options.	Future provision for 2 EV Charging Bays. Provision for Bike Storage racks. Provision for Public Transport Loop and available public transport within 100m of the site.

EMERGEN

APPENDIX 1 – THERMAL CONSTRUCTION - GENERAL

Excerpt from the BCA, Volume One - Part J1.2

Thermal Construction - General

1. Where required, insulation must comply AS/NZS 4859.1 and be installed so that it –
    a. Abuts or overlaps adjoining insulation other than at supporting members such as studs, noggings, joists, furring channels and the like where the insulation must be against the member; and
    b. Forms a continuous barrier with ceilings, walls, bulkheads, floors or the like that inherently contribute to the thermal barrier; and
    c. Does not affect the safe or effective operation of a domestic service or fitting.
2. Where required, reflective insulation must be installed with –
    a. The necessary airspace, to achieve the required R-Value between a reflective side of the reflective insulation and a building lining or cladding; and
    b. The reflective insulation closely fitted against any penetration, door or window opening; and
    c. The reflective insulation adequately supported by framing members; and
    d. Each adjoining sheet of roll membrane being –
        i. Overlapped not less than 50 mm; or
        ii. Taped together.
3. Where required, bulk insulation must be installed so that –
    a. It maintains its position and thickness, other than where it crosses roof battens, water pipes, electrical cabling or the like; and
    b. In a ceiling, where there is no bulk insulation or reflective insulation in the wall beneath, it overlaps the wall by not less than 50mm.
4. Roof, ceiling, wall and floor materials, and associated surfaces are deemed to have the thermal properties listed in Specification J1.2
5. The required Total R-Value and Total System U-Value, including allowance for thermal bridging, must be –
    a. Calculated in accordance with AS/NZS 4859.2 for a roof or floor; or
    b. Determined in accordance with Specification J1.5a for wall-glazing construction; or
    c. Determined in accordance with Specification J1.6 or Section 3.5 of CIBSE Guide A for soil or sub-floor spaces.

Appendix L – SPP 7.0 Design of the Built Environment Assessment

LOT 50 PARKER STREET, SOUTH HEDLAND REGIONAL ACCOMMODATION PROPOSAL

PRE-LODGEMENT STATE PLANNING POLICY 7.0 – DESIGN OF THE BUILT ENVIRONMENT ASSESSMENT

DESIGN PRINCIPLE NO.	DESIGN PRINCIPLE	PRINCIPLE STATEMENT	DEVELOPMENT RESPONSE
1	**Context and Character**	***Good design responds to and enhances the distinctive characteristics of a local area, contributing to a sense of place.***	• The 4.9ha development site is Lot 51 Kennedy Street, South Hedland. It forms part of the undeveloped street block bounded by Kennedy Street, Coppin Place and Stanley Street. It has dual street frontages; 114m to Stanley Street and 192m to Kennedy Street. • The site slopes 3m to the west and is vacant with scattered trees and shrubs across the site. • A reconnaissance flora and fauna survey undertaken in Dec 2024 determined the vegetation condition is degraded and unikely to provide significant habitat for conservation significant flora or fauna. • The site was previously developed by BHP as the Pundulmurra Camp, which was demobilised in approx.. 2015. • Hardstand, an existing crossover and slip lane remain in the western portion of the site and on Kennedy Street. • The site is zoned for urban development and identified for future (short term 0-5 years) residential growth as the Pundulmurra Structure Plan Area in the Town's Local Planning Strategy 2021. • The site interfaces with: • North: Lots 2945, 89 and 2462 state owned land managed by the Water Corporation and containing the Water Tower (key South Hedland icon) and

			shallow water infrastructure. This land separates the site from the former Cedar Woods residential development further north. • West: Lot 50 owned by Seventh Day Adventist Church and planned for development for the purpose of a place of worship and community hall. • South: Lot 2940 owned by Horizon Power. • South-west: Lot 5278 State owned land state land managed by Water Corporation and occupied by a pump station. • The surrounding area comprises R20-R50 residential development (east of Stanley Street and south of Kennedy Street and Coppin Place. The North Region TAFE Pundulmurra Campus is west of Parker Street). The South Hedland Primary and High Schools, along with a variety of formal and passive recreation spaces are also located in the surrounding area. The design responds to the local context and character by: • Developing the site for a mix of **low scaled, residential programmed accommodation** in a landscaped setting. There are 79 units (15 double storey Townhouses, 64 accommodation units, 2 of which are accessible). Overall 297 rooms are proposed. • **Diverse housing product** supports the site's transition to an ultimate permanent residential purpose. The worker accommodation use is intended to meet current demand for worker accommodation and subsidise prohibitive housing construction costs to establish long term permanent residential housing. Town houses are provided initially to demonstrate the landowner's commitment to achieving long term permanent residential and to invest early in the future residential character. • Townhouses (permanent residences) are sited along Stanley Street activating the site's primary street frontage and integrating the site with residential neighbourhood to the east. • Accommodation units are internally oriented to the water tower providing sense of place. • The design incorporates **existing grading and infrastructure interfaces.** Communal facilities (Administration recreation and gymnasium) and visitor and resident car parking are accessible via the existing crossover and slip lane on Kennedy Street. • The **communal facilities** are provided in a landscape frame located at the street edge. Communal facilities are intended to be retained in the permanent residential scheme and will activate the site's primary public interface and provide opportunity for

			passive surveillance now and in the future. • The communal facilities also act as a **legible entry** to the Dining Hall and associated landscaped areas which could be utilised as blended community space together with the future church and community hall development on Lot 50. • **Streetscape planting** will contribute to the early establishment of permanent residential amenity and connect into the existing residential streetscape. • A new crossover servicing **'Back of House' zone** is proposed. The Back of House zone is located centrally onsite and along the western site boundary, being an improvement compared to the former BMP camp where it was adjacent to Kennedy Street. • All **traffic access and egress** will be concentrated at the south-west of the site closest to the TAFE, and will be well recessed from the existing residential neighbourhood. • An **internal one-way loop road** and use of bus transport will limit traffic volumes on Stanley Street, southern Kennedy Street and Coppin Place.
2	**Landscape Quality**	***Good design recognises that together landscape and buildings operate as an integrated and sustainable system, within a broader ecological context.***	• The landscape led design ensures the internal built form is serviced along a network of landscaped spines and pedestrian pathways that link accommodation units to key communal facilities including the Activity Precinct and Dining Hall, as well as a range of outdoor gardens and spaces. • Two 2.5m wide central N-S green pedestrian corridors provide comfortable, legible, and shaded access as well as connection to nature. These corridors are supported by the network of structured and informal pathways, which run along a series of planted swales designed to manage wet season rainfall. The pathways provide opportunity for passive and active recreation and community interaction. A 600m looped running track has been integrated into the pathway network. • The swales are integrated landscape features that enhances the site's ecological biodiversity. They support best practice urban water management and civil design and habitat creation. They also provide visual and acoustic amenity, acting as natural separation between active communal and quiet accommodation zones. • The planting strategy will establish a well-vegetated, visually appealing and character-rich hierarchical landscape. Carefully selected plant species will support the site's ecological functions by prioritising endemic and native plant species that are climate and context responsive including plants with wind-resistant root systems and tolerance

			to heavy rainfall, align with the local flora and fauna and reduce maintenance needs. • The existing scattered trees and shrubs have a degraded environmental conservation condition and there is limited opportunity for retention of existing vegetation given the need for on-site stormwater management. Existing onsite vegetation will be retained / transplanted where possible. • The landscape framework prioritises a strong canopy for shade, cooling and thermal comfort. Hardscape will be minimised to reduce the heat island effect. • Recycled materials, such as rock and feature steel will be incorporated where possible to reinforce sense of place, durability, climate suitability and reduction of waste and environment impact. • Streetscape planting promotes built form and ecological neighbourhood integration, residential privacy, and shading in communal areas and courtyards. Street tree selection will be appropriate to the local residential character of South Hedland and the project will plant early, investing in the establishment of the site's permanent residential character.
3	**Built Form and Scale**	***Good design ensures that the massing and height of development is appropriate to its setting and successfully negotiates between existing built form and the intended future character of the local area.***	• A diverse mix of accommodation is targeted to a wide market of mining and industrial shift/swing workers, as well as local professionals and essential service workers. A portion of the accommodation units will be offered to service workers on accessible rental terms. • The proposed low scale and massing of the accommodation units and communal facilities represent development at a human scale. The scale and massing respond appropriately to the local residential context with appropriate landscaped setbacks and street planting to establish a balanced streetscape. • The development appropriately addresses its dual street frontages providing activation and opportunity for passive surveillance. • Internally, the hierarchy of wide and landscaped pedestrian accessways that service the recreation spaces, accommodation units and communal facilities optimise legibility and wayfinding. They also encourage activity and passive surveillance and reinforce

			sight lines to the water tower. • The retention of existing access points and traffic slip lane reduces utilises existing infrastructure and urban fabric.
4	**Functionality and Build Quality**	***Good design meets the needs of users efficiently and effectively, balancing functional requirements to perform well and deliver optimum benefit over the full lifecycle.***	• The site programming provides for clear accommodation and communal zones. Communal spaces are centrally located and connected to all accommodation units by a network of pedestrian paths. All units are within 300m of the Dining Hall optimising accessibility. • Landscaped swales which run alongside the pathways provide acoustic separation between the accommodation units, urban water management solutions, visual relief and connection to nature. • Retained access points and slip lanes and the internalised loop road channels traffic access and egress at the south-west of the site in accordance with historic arrangements. The loop road promotes site functionality by allowing efficient traffic circulation and reducing congestion. Internal bus collection points and car parking avoids the generation of additional on-street parking demand and unnecessary traffic volumes on Stanley Street or Coppin Place. • High-quality materials and construction techniques ensure long-term durability, accommodating both temporary and permanent uses. • The proposed development forms part of the land use lifecycle strategy to achieve permanent residential development on the site. In the short to medium term worker accommodation, including a portion of which will be targeted to key service workers, will meet an important current housing need to support the Town's and State's economic development. Over time, this land use will generate the funds required to transition the site to permanent residential development. • The diverse accommodation offer, including 15 townhouses, demonstrates the landowner's commitment to transition to permanent residential development on the site. • Early investment into streetscape landscaping will help to establish the streetscape

			interface and enhance the long-term residential character of the area. • Kennedy Street represents the site's public frontage and entry point for potential shared community space located around the Dining Hall and bus collection zone. Together with the interface to Lot 50, the site has the capacity to support community events including food truck evenings, markets, outdoor film. These community events support social activation, foster local business engagement and community interaction. • The development's 'Back of House' service zone is screened from Parker St and Kennedy Street by Lot 50 and the communal facilities and Activity Precinct. It is well separated from the existing residences located north of Lot 2945 managed by the Water Corporation, as well as internal accommodation units via a large integrated drainage swale.

5	**Sustainability**	***Good design optimises the sustainability of the built environment, delivering positive environmental, social and economic outcomes.***	• The project integrates water-sensitive urban design (WSUD) principles, reducing environmental impact and supporting long-term sustainability.
			
			• The retention of existing infrastructure (site access points, traffic lanes) and use reuse and recycling of landscape materials (rock and feature steel) minimises construction waste and enhances resource efficiency.
			
			• The site layout optimises passive solar orientation, reducing energy demand while maintaining thermal comfort.
			
			• The proposed landscape design supports ecological sustainability and urban heat mitigation.
			
			• Sustainability features include:
			  • Natural ventilation to all buildings with openable windows
			  • High daylight levels to >40% of regularly occupied areas and 20% reduction in lighting power
			  • Use of low TVOC or non-toxic paints, adhesives and wood products
			  • !0% offset in operational energy usage
			  • Future provision of solar PV array to supply renewable energy communal facility roofspace.
			  • Future provision for 2 EV charging bays.

			• Provision for bicycle storage • High WELS ratings equal to above 30% reduction in potable water • Generous veranda depth, shaded walkways and clustered canopy over walkways and in landscaped features (BBQ feature)
6	**Amenity**	***Good design provides successful places that offer a variety of uses and activities while optimising internal and external amenity for occupants, visitors and neighbours, providing environments that are comfortable, productive and healthy.***	• The diverse accommodation offer is supported by a range of passive and active recreational and landscaped zones and communal facilities which provide a high-quality living environment for both temporary and permanent residents. • Internal landscaped areas provide easy pedestrian connectivity to key communal facilities and nature, as well as visual and acoustic relief creating separation between the strands of accommodation. • The potential capacity to open up the shared communal facilities, central Dining hall and associated landscaped space and bus collection area for community events allows for the sharing of amenity with the local neighbourhood. • Deliberate activity programming ensures service and maintenance and active recreation areas are separated from the quieter accommodation zones. • Opportunities exist to integrate local artwork into the development on side facades of the townhouses and communal facilities and landscape generally. • The townhouses and communal facilities are designed with an external outlook with active courtyards and openings. These design features improve activity and passive surveillance of public spaces.
7	**Legibility**	***Good design results in buildings and places that are legible, with clear connections and easily identifiable elements to help people find their way around.***	• Internally, the development features separated vehicle and pedestrian access routes, a clear hierarchy of pathways and open spaces, ensuring intuitive navigation. • The retention of pre-existing access points and slip lanes aids logical site circulation, benefiting new and returning users. • The network of pedestrian pathways, open sightlines to the water tower, active street frontages, residential programming and streetscape landscaping improve

			wayfinding, establish the site's sense of place and distinguish between public and private spaces.
8	**Safety**	***Good design optimises safety and security, minimising the risk of personal harm and supporting safe behaviour and use.***	• Active frontages and well-connected communal areas enhance opportunities for passive surveillance, promoting safety for residents, visitors and the neighbourhood more broadly. • The retention of known existing traffic slip lanes and access points, as well as the internal loop road and bus collection zone, reduces potential hazards and vehicle and pedestrian conflict. Dedicated vehicle access to the 'Back of House' service zone separates service and maintenance traffic from public and primary trafficable areas. • Comfortable shaded pathways, delineated by landscape treatments including lighting, ensure clear internal sightlines, enhanced passive surveillance and avoid isolated spaces.
9	**Community**	***Good design responds to local community needs as well as the wider social context, providing environments that support a diverse range of people and facilitate social interaction.***	• Then proposal provides diverse housing options including town houses and accessible units which can address short to medium term accommodation demand for shift/swing workforces, as well as more permanent housing solutions for key service workers. In the longer term, the worker accommodation component will help subsidise the costs of delivering permanent residential development on the site. The diverse housing options are intended to support individual employees and small business operators over the short and long term. • The proposed infill development will activate a disused vacant site in an existing residential neighbourhood. Increased activity provides greater opportunities for community interaction and passive surveliance. The development will also connect the existing residential neighbourhood to the TAFE. • The development's public frontage on Kennedy Street and potential capacity to open up the shared communal facilities, central Dining hall and associated landscaped space and bus collection area for community events encourages local business activity and social cohesion. • The applicant's small family-owned development model prioritises local training,

			procurement and employment opportunities. This model supports community-driven growth and sustainable economic opportunities.
10	**Aesthetics**	***Good design is the product of a skilled, judicious design process that results in attractive and inviting buildings and places that engage the senses.***	• The design maintains a balanced combination of landscaping, diverse built forms, and functional materiality that adds visual appeal, and appropriately contributes externally to the streetscape and the residential surrounds and internally to the accommodation units, Activity Precinct and open spaces. • The design retains existing site infrastructure and existing access points and slip lanes. This supports cohesion and integration into the surrounding residential neighbourhood. • Local plant selection, guided by the landscape architect, reinforces climate sensitive design and fosters biodiversity values. • The proposed materiality composition connects the development to the Pilbara region and its local context. The design makes provision for the opportunity for reuse and recycling of rock and feature steel and accentuates water tower sight lines. The townhouse materials palette reflects a typical residential detailing aiding integration into the local neighbourhood.

Appendix M – R-Codes Volume 1 Assessment

SHRA Workers Accommodation Village and Grouped Dwelling Development – Lot 51 Kennedy Street, South Hedland

1.0 THE GARDEN

1.1 PRIVATE OPEN SPACE

DEEMED-TO-COMPLY	MEETS DEEMED TO	ADDRESSES DESIGN	NOT APPLICABLE	DEEMED-TO-COMPLY REQUIREMENT	PROVIDED	DESIGN PRINCIPLE (IF APPLIED)	COMMENTS / CONDITION OF APPROVAL
C1.1.1 An outdoor living area (OLA) with an area of 10% of the lot size or 20m^2, whichever is greater, directly accessible from a habitable room of the dwelling and located behind the street setback area. At least 70% of the OLA much be uncovered and includes areas under eaves which adjoin uncovered areas. The OLA has a minimum 3m length or width dimension. No other R-Codes site cover standards apply	☒	☐	☐	Site area approx. 156m^2 for each dwelling. 25m^2 minimum primary garden area open to the sky. Minimum dimension of 3m.	34.65m^2 courtyards provided with a 5m dimension, open to the sky.		

1.2 TREES AND LANDSCAPING

DEEMED-TO-COMPLY	MEETS DEEMED TO	ADDRESSES DESIGN	NOT APPLICABLE	DEEMED-TO-COMPLY REQUIREMENT	PROVIDED	DESIGN PRINCIPLE (IF APPLIED)	COMMENTS / CONDITION OF APPROVAL
C1.2.1 Development to provide a minimum 15% soft landscaping per site with a minimum dimension of 1m.	☒	☐	☐	Min 15% soft landscaping per site min dimension 1m.	21% of the site area is landscaped with a dimension of 5m.		
C1.2.2 The primary street setback area is to provide a minimum 30% soft landscaping.	☒	☐	☐	Min 30% soft landscaping in primary street setback area.	100% of the 3m primary street setback is landscaped.		
C1.2.4 A minimum number of trees to be planted in accordance with Tables 1.2a and provided with the required deep soil area per tree in accordance with Table 1.2b.	☒	☐	☐	1m small tree per lot.	1 tree per lot fronting street provided.		
C1.2.5 5 For grouped and multiple dwellings, uncovered at-grade car parking to include shade trees planted at a minimum ratio of one small tree for every four car spaces, with the total required number of trees to be rounded up to the nearest whole number.	☒	☐	☐	1 tree per 4 car spaces in at-grade car parking area.	8 trees are provided within the car parking area containing 30 bays.		

1.4 WATER MANAGEMENT AND CONSERVATION

DEEMED-TO-COMPLY	MEETS DEEMED TO	ADDRESSES DESIGN	NOT APPLICABLE	DEEMED-TO-COMPLY REQUIREMENT	PROVIDED	DESIGN PRINCIPLE (IF APPLIED)	COMMENTS / CONDITION OF APPROVAL
C1.4.1 Stormwater runoff draining from roofs, driveways, communal streets and other impervious surfaces generated by a small rainfall event to be retained on site, with run-off directed to garden areas, rainwater tanks and infiltration cells (e.g. soakwells), appropriate to climatic, local soil and groundwater conditions.	☒	☐	☐		Stormwater runoff will be directed via swales to the detention basin and a boundary swale along Kennedy Street. Rainfall will be detained for a 1 in 5 year (20% AEP) - 6 minute rainfall event (up to 15 mm rainfall) from impervious areas and and not exceeding predevelopment flooding condition for 1% AEP event. The site grading will result in two stormwater catchments with runoff from these being managed in the two drainage areas: the central drainage basin, and the boundary swale along Kennedy Street. Refer to Preliminary UWMP.		
C1.4.2 Notwithstanding C1.4.1, stormwater may be directed to a district or local stormwater drainage system where required by the decisionmaker due to climatic, local soil or groundwater conditions.	☐	☐	☒				

2.0 THE BUILDING

2.1 Size and Layout of Dwellings

DEEMED-TO-COMPLY	MEETS DEEMED TO	ADDRESSES DESIGN	NOT APPLICABLE	DEEMED-TO-COMPLY REQUIREMENT	PROVIDED	DESIGN PRINCIPLE (IF APPLIED)	CONDITION OF APPROVAL (IF APPLIED)
C2.1.1 Each dwelling is to have one room that is the designated primary living space.	☒	☐	☐		Provided. Dwellings include a designated living space.		
C2.1.2 where the primary living space is provided on the ground floor, it is to have direct physical and visual access to the primary garden area	☒	☐	☐		Provided. Living spaces open into the alfresco and courtyard area.		
C2.1.9 Each dwelling has exclusive use of a dedicated, weatherproof storage area in accordance with Table 2.1b, that is located behind the primary street setback and accessible via an opening that does not open inwards.	☒	☐	☐	4m^2 storage area. Minimum storage area dimension 1.5m Minimum storage area height 2.1m	4m^2 storage area provided with 1.5m dimension and 2.1m height on ground floors and 3m^2 storage area provided on upper floor.		

2.2 Solar access and natural ventilation

DEEMED-TO-COMPLY	MEETS DEEMED TO	ADDRESSES DESIGN	NOT APPLICABLE	DEEMED-TO-COMPLY REQUIREMENT	PROVIDED	DESIGN PRINCIPLE (IF APPLIED)	CONDITION OF APPROVAL (IF APPLIED)
C2.2.1 Every habitable room has a minimum of one openable external window.	☒	☐	☐	i. visible from all parts of the room; ii. with an aggregate glazed area not less than 10 per cent of the	Provided. 2.4m external window provided, equivalent to approx. 15% of the habitable room internal floor area.		

				habitable room internal floor area; and iii. comprising a minimum of 50 per cent of transparent glazing.			
C2.2.2 Where a courtyard is the only source of daylight to a habitable room, the courtyard must be uncovered and open to the sky.	☒	☐	☐	Minimum area of 4m2.	Provided. Courtyards are open to the sky and approx. 34m^2.		
C2.2.3 Bathrooms located on external walls (excluding boundary walls) must have a minimum of one openable window for natural ventilation.	☒	☐	☐		Dwellings optimise natural ventilation to bathrooms through the provision of major openings except on boundary walls.		
C2.2.4 For single houses and grouped dwellings in climate zones 4,5 and 6, a major opening to the primary living space is oriented between north-west and east in accordance, with an adjoining uncovered open area with a minimum dimension 3m x 3m.	☒	☐	☐		Provided. Major openings into primary living spaces and courtyards are oriented north-east to east.		

2.3 PARKING

DEEMED-TO-COMPLY	MEETS DEEMED TO	ADDRESSES DESIGN	NOT APPLICABLE	DEEMED-TO-COMPLY REQUIREMENT	PROVIDED	DESIGN PRINCIPLE (IF APPLIED)	CONDITION OF APPROVAL (IF APPLIED)
C2.3.1 Occupant car parking is provided on site and in accordance with Table 2.3a.	☒	☐	☐	Min 1 space per dwelling.	Provided. 30 bays provided / 15 dwellings.		
C2.3.3 Car spaces and manoeuvring areas designed and provided in accordance with AS2890.1.	☒	☐	☐		Provided.		
C2.3.4 Visitor car parking for grouped and multiple dwellings is provided on site and in accordance with Table 2.3a.	☐	☒	☐	3 plus 1 additional space per 4 dwellings or part thereof – 7 spaces	10 additional car bays are 10 additional car bays are provided in the Kennedy Street setback for visitor car parking. Refer to TIS. In addition, visitors may park along Stanley Street to access the townhouses via the front courtyard entry.	Parking spaces are designed for flexibility and adaptability having regard for: i. the needs of occupants, including consideration of universally accessible parking spaces; and ii. ii. the ability to use the space for alternative purposes.	

2.4 WASTE MANAGEMENT

DEEMED-TO-COMPLY	MEETS DEEMED TO	ADDRESSES DESIGN	NOT APPLICABLE	DEEMED-TO-COMPLY REQUIREMENT	PROVIDED	DESIGN PRINCIPLE (IF APPLIED)	CONDITION OF APPROVAL (IF APPLIED)
C2.4.1 A dedicated and accessible space is provided to accommodate the required number and type of waste storage bins for the development, in line with requirements of the local government and separate from any waste storage areas associated with the non-residential component of a mixed use development.	☒	☐	☐		Two (2) shared bin collection areas are provided to the north and south of the townhouse car parking area, supporting effective waste management at the subject site.		
C2.4.3 Waste storage bins are screened from view from communal areas, the street, public open space, and other areas accessible to the public.	☒	☐	☐		Each shared bin collection point is screened from Stanley Street or public realm, being situated adjacent to the townhouse car park.		

2.5 UTILITIES

DEEMED-TO-COMPLY	MEETS DEEMED TO	ADDRESSES DESIGN	NOT APPLICABLE	DEEMED-TO-COMPLY REQUIREMENT	PROVIDED	DESIGN PRINCIPLE (IF APPLIED)	CONDITION OF APPROVAL (IF APPLIED)
C2.5.1 Service utilities are designed and located such that they: i. are accessible and can be safely maintained; ii. ii. maintain clear sightlines for vehicle access; and iii. integrated into the design of the development and/or screened from view of the street.	☒	☐	☐		Service utilities will be extended from the Stanley Street water main and Coppin Place Gravity Sewer Main.		
C2.5.2 Functional utilities (with the exception of solar collectors and electric vehicle charging): i. are located behind the primary street setback and not visible from the primary street; ii. are designed to integrate with the development; and iii. are located and/or screened so that they are not visually obtrusive and minimise the impact of noise sources to habitable rooms and private open space both on the development site and adjoining properties.	☐	☐	☒		N/A		
C2.5.3 Where provided, solar collectors are located on the roof or other parts of buildings, and prioritise functional performance.	☐	☐	☒		N/A		

2.6 OUTBUILDINGS

DEEMED-TO-COMPLY	MEETS DEEMED TO	ADDRESSES DESIGN	NOT APPLICABLE	DEEMED-TO-COMPLY REQUIREMENT	PROVIDED	DESIGN PRINCIPLE (IF APPLIED)	CONDITION OF APPROVAL (IF APPLIED)
C2.6.1 Any outbuilding:	☐	☐	☒		N/A		

i. individually or collectively does not exceed 60m² per site; ii. ii. is not located within the primary or secondary street setback area; iii. iii. does not exceed a wall height of 3m; iv. iv. does not exceed a ridge height of 4.2m; v. v. is set back or built up to lot boundaries in accordance with C3.4.1, C3.4.4 or C3.4.5; vi. vi. does not exceed the maximum allowable site cover in accordance with C3.1.1; vii. vii. does not reduce the minimum primary garden area required in accordance with C1.1.1; viii. viii. does not reduce the minimum soft landscaping required in accordance with C1.2.1; and ix. ix. does not reduce the minimum tree requirement and associated deep soil area in accordance with C1.2.4.							
C2.6.2 Notwithstanding C2.6.1(iii), where an outbuilding is designed to be compatible with the colour and materials of the dwelling on the same site, the wall height may be increased to 3.5m.	☐	☐	☒		N/A		

2.8 ANCILLARY DWELLINGS

DEEMED-TO-COMPLY	MEETS DEEMED TO	ADDRESSES DESIGN	NOT APPLICABLE	DEEMED-TO-COMPLY REQUIREMENT	PROVIDED	DESIGN PRINCIPLE (IF APPLIED)	CONDITION OF APPROVAL (IF APPLIED)
An ancillary dwelling in accordance with Table 2.8a, provided that it: i. does not preclude the primary dwelling from meeting the maximum site cover and the minimum required private open space, soft landscaping, trees and deep soil area; and ii. complies with the following design elements as relevant: • 2.2 Solar access and natural ventilation • 2.3 Parking • 2.5 Utilities • 3.1 Site cover • 3.2 Building height • 3.3 Street setbacks • 3.4 Lot boundary setbacks • 3.5 Site works and retaining walls • 3.6 Streetscape • 3.7 Access • 3.9 Solar access for adjoining sites • 3.10 Visual privacy	☐	☐	☒		N/A		

2.9 SMALL DWELLINGS

DEEMED-TO-COMPLY	MEETS DEEMED TO	ADDRESSES DESIGN	NOT APPLICABLE	DEEMED-TO-COMPLY REQUIREMENT	PROVIDED	DESIGN PRINCIPLE (IF APPLIED)	CONDITION OF APPROVAL (IF APPLIED)
Small Dwellings – Part D, C1.1.6 and C1.1.7 applies and provides a site area concession C2.9.1 Small dwellings subject to the site area concession of Part D, C1.1.6 or C1.1.7 shall comply with the following: i. for single houses and grouped dwellings, a maximum internal dwelling floor area of 70m2 or for multiple dwellings a maximum internal floor area of 60m2; ii. parking provided in accordance with Table 2.3a; and iii. all other provisions of the R-Codes.	☐	☐	☒		N/A		

3.0 NEIGHBOURLINESS

3.1 SITE COVER

DEEMED-TO-COMPLY	MEETS DEEMED TO	ADDRESSES DESIGN	NOT APPLICABLE	DEEMED-TO-COMPLY REQUIREMENT	PROVIDED	DESIGN PRINCIPLE (IF APPLIED)	CONDITION OF APPROVAL (IF APPLIED)
C3.1.1 Development on each site does not exceed the maximum site cover percentages of Table 3.1a.	☒	☐	☐	R40 – 65%	Complies. Dwellings occupy approximately 60% of the site area.		

3.2 BUILDING HEIGHT

DEEMED-TO-COMPLY	MEETS DEEMED TO	ADDRESSES DESIGN	NOT APPLICABLE	DEEMED-TO-COMPLY REQUIREMENT	PROVIDED	DESIGN PRINCIPLE (IF APPLIED)	CONDITION OF APPROVAL (IF APPLIED)
C3.2.1 Building height complies with Table 3.2a.	☒	☐	☐	R40 – 2 storeys, 8m building height (skillion/concealed roof)	Complies (max. 2 storeys and less than 8m).		

3.3 STREET SETBACKS

DEEMED-TO-COMPLY	MEETS DEEMED TO	ADDRESSES DESIGN	NOT APPLICABLE	DEEMED-TO-COMPLY REQUIREMENT	PROVIDED	DESIGN PRINCIPLE (IF APPLIED)	CONDITION OF APPROVAL (IF APPLIED)
C3.3.1 Buildings are set back from the street boundary in accordance with Table 3.3a	☒	☐	☐	Primary street: R40 3m	Complies. Dwellings are setback 5m from Stanley Street.		
C3.3.2 Notwithstanding C3.3.1, the following reductions are permitted: i. in areas coded R30, R35 and R40, the primary street setback line may be reduced by up to 1m for a total of 30 per cent of the frontage width (refer Figure 3.3a); and/or ii. for a porch, verandah, unenclosed balcony or equivalent the primary street setback may be reduced up to half the required primary street setback as specified in Table 3.3a, up to the full building width (refer Figure 3.3b).	☐	☐	☒	N/A	N/A		
C3.3.3 Buildings set back from a corner lot truncation boundary in accordance with the secondary street setback line in Table 3.3a.	☐	☐	☒		N/A		

3.4 LOT BOUNDARY SETBACKS

DEEMED-TO-COMPLY	MEETS DEEMED TO	ADDRESSES DESIGN	NOT APPLICABLE	DEEMED-TO-COMPLY REQUIREMENT	PROVIDED	DESIGN PRINCIPLE (IF APPLIED)	CONDITION OF APPROVAL (IF APPLIED)
C3.4.1 Buildings are set back from lot boundaries in accordance with Table 3.4a.	☐	☐	☒	N/A	N/A		
C3.4.2 The second storey of walls shall be set back in accordance with Table 3.4a for a maximum wall length of 14m (including any balconies). For a portion of wall exceeding 14m in length: i. the wall is to be set back 3m from the lot boundary for the remainder of its length; or ii. contain a minimum 3m x 3m separation measured from the lot boundary (Refer Figure 3.4d).	☐	☐	☒		N/A		
C3.4.3 Carports, patios, verandahs or equivalent structures are permitted to be built up to the lot boundary where the: i. structures are less than 10m in length; ii. structures do not exceed an equivalent wall height of 3m (measured to the top of pillar and/ or post, refer Figure 3.4e); iii. structures do not exceed a ridge height of 4.2m; and iv. pillar and posts on the boundary are of a horizontal dimension of 450mm by 450mm or less.	☐	☐	☒	N/A	N/A		

3.5 SITE WORKS AND RETAINING WALLS

DEEMED-TO-COMPLY	MEETS DEEMED TO	ADDRESSES DESIGN	NOT APPLICABLE	DEEMED-TO-COMPLY REQUIREMENT	PROVIDED	DESIGN PRINCIPLE (IF APPLIED)	CONDITION OF APPROVAL (IF APPLIED)
C3.5.1 Retaining walls, fill and excavation forward of the street setback line, not more than 0.5m above or below the natural ground level, except where necessary to provide for pedestrian universal access and/or vehicle access, drainage works, or natural light to a dwelling.	☒	☒	☐		Cut (to the north-east up to 1.5m) and fill (to the centre west up to 1.5m) is proposed as part of the development to manage the 4m (east to west) fall across the site and for onsite stormwater retention. Refer to FFLs on RSA Engineering Civil Stormwater Plan		
C3.5.2 Retaining walls and fill within the site and behind the street setback to comply with Table 3.5a.	☐	☐	☒		Not provided		
C3.5.3 Excavation within the site is permitted behind the street setback line and may be constructed up to the lot boundary.	☒	☐	☐		Cut is proposed to the higher north-east of the site, inside the site boundary, in line with the RSA Engineering Civil Stormwater Plan (to 14.75 FFL)		

3.6 STREETSCAPE

DEEMED-TO-COMPLY	MEETS DEEMED TO	ADDRESSES DESIGN	NOT APPLICABLE	DEEMED-TO-COMPLY REQUIREMENT	PROVIDED	DESIGN PRINCIPLE (IF APPLIED)	CONDITION OF APPROVAL (IF APPLIED)
C3.6.1 Single houses and grouped dwellings to address the street (including a communal street or right-of-way where this is the primary frontage) in accordance with the following: i. the primary entrance to each dwelling must be readily identifiable from the street; and ii. accessible and protected from the weather; and well-lit for safety and amenity, without opportunity for concealment, and designed to enable passive surveillance of the entry from within the lot. provide at least one major opening on the dwelling frontage with an outlook to the street.	☒	☐	☐		Entry through the courtyard with major openings fronting the street.		
C3.6.3 For single houses and grouped dwellings, front doors to be protected from the weather (for example by a porch, verandah, building over or similar), with a minimum dimension of 1.2m (refer Figure 3.6a).	☒	☐	☐		Front doors are protected from the weather under alfresco areas with an approximate dimension of 3m.		
C3.6.7 When provided, fences or walls within the primary street setback area are to be: i. a maximum height of 1.8m; and ii. visually permeable above 1.2m; measured from natural ground level on	☒	☐	☐		Complies. Maximum height of 1.8m and visually permeable over 1.2m. Garrison style permeable front fencing is proposed.		

the primary street side of the fence or wall.							
C3.6.9 For sites on street corners, street fences or walls within the secondary street setback area are to be designed in accordance with C3.6.7 and C3.6.8 for a minimum 50 per cent of the street boundary behind the primary street setback (refer Figure 3.6d).	☐	☐	☒		N/A		

3.7 ACCESS

DEEMED-TO-COMPLY	MEETS DEEMED TO	ADDRESSES DESIGN	NOT APPLICABLE	DEEMED-TO-COMPLY REQUIREMENT	PROVIDED	DESIGN PRINCIPLE (IF APPLIED)	CONDITION OF APPROVAL (IF APPLIED)
C3.7.1 Vehicle access to on site car parking spaces to be provided via the lowest available street in the hierarchy, as follows: i. where available, from a right-of-way or communal street available for lawful use to access the relevant site and which is trafficable and drained from the property boundary to a constructed street; or ii. from the secondary street or primary street where no right-of-way or communal street exists.	☒	☐	☐		Access provided via internal accessway connecting to Kennedy Street crossovers.		
C3.7.2 Vehicle access points are limited to one per lot (refer Figure 3.7a) except where: i. an existing dwelling is being retained that has an established access point that is not able to serve the other dwellings; ii. dwellings front the street and access is not available from a communal street or rear rightof-way, whereby a maximum of one vehicle access point is permitted per dwelling; or iii. the lot frontage exceeds 40m, two vehicle access points are permitted.	☒	☐	☐		Lot frontage exceeds 40m – 2 crossovers proposed for the entire site on Kennedy Street.		
C3.7.3 Driveways must be: i. a minimum 3m wide; ii. a maximum 6m wide at the street boundary; iii. set back 0.3m from a side lot boundary or street pole; iv. set back 6m to a street corner (refer Figure 3.7b); v. aligned at right angles to the road carriageway; and vi. adequately trafficable and drained.	☐	☐	☒		N/A		
C3.7.4 Driveways designed to allow vehicles to exit to the street in forward gear where the driveway: i. serves five or more dwellings; ii. the distance from an on site car parking space to the street boundary is 30m or more; or iii. the street to which it connects is a designated primary distributor or integrator arterial.	☐	☐	☒		N/A		
C3.7.7 Walls, fences and other structures truncated or reduced to no higher than 0.75m within 1.5m of where walls, fences, or other structures adjoin: i. a driveway that intersects a street, right-of-way or communal street; ii. a right-of-way or communal street that intersects a public street; and iii. two streets that intersect (refer Figure 3.7e).	☐	☐	☒		N/A		
C3.7.8 For grouped and multiple dwellings, a legible, well-defined, continuous path of travel is provided from the public footpath and car parking areas to building access areas such as lift lobbies, stairs, accessways and individual dwelling entries.	☒	☐	☐		Provided. A 2m wide landscaped pathway is provided between the proposed townhouse car park and dwellings. Footpath access along Stanley Street is also provided.		

3.9 SOLAR ACCESS FOR ADJOINING SITES

DEEMED-TO-COMPLY	MEETS DEEMED TO	ADDRESSES DESIGN	NOT APPLICABLE	DEEMED-TO-COMPLY REQUIREMENT	PROVIDED	DESIGN PRINCIPLE (IF APPLIED)	CONDITION OF APPROVAL (IF APPLIED)
C3.9.2 Notwithstanding C3.9.1, in climate zones 4, 5, and 6, where the adjoining property is: i. coded R40 or greater; and ii has a lot frontage 7.5m or less (excluding battleaxe lots); development is designed so that its shadow cast at midday, 21 June onto any other adjoining property does not exceed the limits set out in Table 3.9b.	☒	☐	☐		Complies. Dwellings are coded R40 and have a lot frontage of 7.2m.		

3.10 VISUAL PRIVACY

DEEMED-TO-COMPLY	MEETS DEEMED TO	ADDRESSES DESIGN	NOT APPLICABLE	DEEMED-TO-COMPLY REQUIREMENT	PROVIDED	DESIGN PRINCIPLE (IF APPLIED)	CONDITION OF APPROVAL (IF APPLIED)
C3.10.1 All sources of overlooking are oriented, offset or setback in accordance with Table 3.10a so that the cone of vision does not capture major openings and/or active habitable spaces on an adjoining property.	☒	☐	☐		Complies. All dwellings avoid overlooking into neighbouring major openings.		

DRP – Report and Recommendations

Town of Port Hedland

DR3 – Design review report and recommendations (Part 1/4) *This report is prepared by the panel coordinator and checked by the design review Chair. To maintain the integrity and independence of the design review process this report should be attached, unedited to Council reports and (if applicable) the Development Assessment Panel Responsible Authority Report.*		
Item no.	Proposed Mixed use development – Lot 51 Kennedy Street, South Hedland	
Date	Wednesday 19 March 2025	
Time	1:00 PM to 2:00 PM	
Location	Microsoft – Teams Meeting	
Panel members	Malcom Mackay Philip Gresley Scott Lang Peter Damen	Chairperson
Local government officers	Kylie Davies Chaz Roberts Srinivas Nanjangud Balachandra Nayonika De	Director Regulatory Services Manager Planning and Economic Development Senior Urban Planner Strategic Planner
Proponent/s	Scott Allen Claire Willey	Grounded Element
Observer/s	Nil	Nil
Briefings		
Development assessment overview	Srinivas Nanjangud Balachandra	Senior Urban Planner
Design review		
Proposed development	Mixed use – Workforce accommodation and Grouped dwellings	
Property address	Lot 51 Kennedy Street, South Hedland	
Background	The site is surrounded by a residential neighbourhood and is close to the South Hedland Town Centre, local schools, North Regional TAFE, and recreation spaces. The site is the former BHP Pundulmurra Campsite, which has been cleared and vacant for approximately 10 years.	
Proposal	The proposal is for a mixed-use development, including the following works: • 62 Accommodation units (248 rooms) • 2 Accessible units (4 rooms) • 15 Town houses (45 rooms) • 4 Laundry modules	

	• Administrative building and convenience shop • Dining hall • Recreation building • Gymnasium • Maintenance building • Barbecue areas • Car parking area with 146 bays • Landscaping throughout the site - Concept plans for landscape design have been submitted. The proposal involves different land uses, such as Dwelling (grouped) and Workforce Accommodation, for the proposed mixed-use development under the Town's Local Planning Scheme No. 7 (LPS7).

DR3 – Design review report and recommendations (Part 2/4)		
Design quality evaluation		
		Supported
		Pending further attention
		Not supported
Principal 1 **Context and Character**		*Good design responds to and enhances the distinctive characteristics of a local area, contributing to a sense of place.*
Comments and Recommendation		**Strengths** a) Some context analysis has been provided, although it stops short of describing the range of destinations in the broader locality. b) The grouped dwellings are, in principle, a good interface to the residential uses across the road. c) The incorporation of workers accommodation within the urban area rather than a remote location is supported. **Areas for improvement** d) Whilst some understating of context has been provided, particularly regarding landscape, there is little discussion on built form character cues and how they might inform the proposed architecture. At present, the architecture looks more Perth metro than Pilbara. e) The site is surrounded on 3 side by vacant land, which presents a unique set of challenges – the design needs to provide a secure and robust interface to these sites. f) More understanding of the strip of land to the north is needed, whether it can function as a pedestrian route and, if so, how a better landscaped interface can be achieved (with potential pedestrian connections). g) Demonstrate how the site relates and connects to the local pedestrian network.

		h) Provide more detail on the proposed fencing to the site interfaces. i) The large area of car park is an understandable functional requirement but an unfortunate street interface. Demonstrate how it's visual impact on the street can be mitigated though landscape and fencing. j) The modular units still look like 'dongers' – explore how they could be more place specific. ***Recommendations*** ***1. Extend the context analysis further afield to pick up other significant local destinations.*** ***2. Undertake further analysis of the local built form for character cues.*** ***3. Review the use of the land to the north and whether it should be considered as a landscape/ pedestrian corridor.*** ***4. Include a pedestrian network diagram in and around the site.*** ***5. Provide more detail on fencing to the public realm.*** ***6. Provide a detailed cross-section through the Kennedy Street interface to demonstrate screening of the car park.*** ***7. Explore how the architecture of the accommodation units can help them feel more permanent and place specific.***
Principle 2 **Landscape quality**		*Good design recognises that together landscape and buildings operate as an integrated and sustainable system, within a broader ecological context.*
Comments and Recommendation		**Strengths** a) The inclusion of a landscape professional in the team and the preparation of a landscape concept that is integrated with the master plan at the early stage of design is positive. b) The landscape concept is a strong holistic approach that includes consideration of related matters such as stormwater management. c) The localised landscape amenity areas are good in principle but could be better aligned with the major paths to help with wayfinding and reduce impact on adjacent units. d) The running loop is positive. Consider how to augment it with art, landscape, exercise stations, etc. **Areas for improvement** e) Extend the landscape concept to the adjacent verges – keep it simple and focus on trees. f) Provide more detailed plans and cross sections through the street interfaces to help better understand the effectiveness of landscape as a street interface. g) The loss of existing trees is disappointing – explore whether some of the existing trees can be retained and/or relocated and provide more detail on tree retention and removal. h) Provide a diagram to explain stormwater movement and management on and across the site. i) Use trees and shade structures to provide more shade and shelter to the

		main pedestrian routes and the car parks. j) Focus on trees rather than low-level planting – more shade and more 'bang for landscape bucks'. k) Ensure landscape is matched with, and manageable under the allocated maintenance budget. l) Review the fencing where it interfaces with the public realm – chain mesh is overly utilitarian. m) Clarify the irrigation strategy. n) Provide more rationale behind the location of the landscape breakout areas and ensure they are universally accessible. ***Recommendations*** ***1. Extend the landscape concept to include the verges.*** ***2. Clarify the site interfaces with detailed cross-sections and fencing details.*** ***3. Investigate the retention of existing trees where possible.*** ***4. Provide more explanation of stormwater management routes in and around the site.*** ***5. Maximise the provision of shade.*** ***6. Prioritise the provision of trees over lower-level vegetation.*** ***7. Match landscape types to the funds available to maintain them.*** ***8. Clarify the irrigation strategy.*** ***9. Review the locations of the landscape breakout areas to minimise nuisance and contribute to better legibility.***
Principle 3 **Built form and scale**		*Good design ensures that the massing and height of development is appropriate to its setting and successfully negotiates between existing built form and the intended future character of the local area.*
Comments and Recommendation		**Strengths** a) The use of the grouped housing to provide an urban interface is good. b) Even though the radial layout of the workers accommodation is at odds with the lot geometry, it works, is legible, and has visual interest. c) The design of the modular buildings is well considered but could be more place specific regarding the colour and material palette. d) The overall built form and scale is consistent with the suburban residential context. e) The master plan implies extensive use of shade elements such as verandas, which is promising. **Areas for improvement** f) Whilst the grouped housing and communal facilities have some feel of permanence, the accommodation units still feel very temporary in comparison. g) Provide a detailed cross section through the grouped housing rear and street interfaces to better explain the intent.

		Recommendations ***1. Explore how the architecture of the accommodation units can help them feel more permanent and place specific.*** ***2. Provide a detailed cross-section through the grouped housing and its front and rear interfaces.***

Principle 4 **Functionality and build quality**		*Good design meets the needs of users efficiently and effectively, balancing functional requirements to perform well and deliver optimum benefit over the full life-cycle*
Comments and Recommendation		**Strengths** a) At the master-plan scale, the development appears to be functional. b) The consolidation of servicing in the back-of-house area is logical. c) The dual driveways facilitate simple bus movements. **Areas for improvement** d) The one-way loop is a long and expensive way to serve the grouped housing, which could be provided with its own access point to Stanely Street instead. e) Clarify the waste management strategy. f) Provide more clarity on the use of the grouped dwellings. ***Recommendations*** ***1. Review the need for the one-way loop and consider exclusive access to the grouped housing from Stanley Street instead.*** ***2. Clarify the waste management strategy.*** ***3. Confirm the intended user group for the grouped housing.***
Principle 5 **Sustainability**		*Good design optimises the sustainability of the built environment, delivering positive environmental, social, and economic outcomes.*
Comments and Recommendation		**Strengths** a) The presentation includes an outline of an emerging sustainability narrative. b) The vertical shading on the communal buildings is good. c) The reuse of existing elements and recycled materials is good but clarify the repurposing of infrastructure on a diagram as part of the sustainability strategy. d) Consideration of Cross ventilation, orientation, and water use is evident. **Areas for improvement** e) Develop the sustainability strategy, including commitments, utilising an ESD consultant if needs be. f) Ensure that sustainability initiatives are baked in during the next and more detailed stage of design. g) PV should be provided from ‘day 1’ rather than seen as a future possibility, and the target capacity should be identified as part of the sustainability strategy.

		h) Given the urban location, provide for micro-mobility and pedestrian movement. i) Ensure that any north, east and west glazing is protected from the sun as far as possible. j) Provide for electrical reticulation to provide for growing EV charging demand, including e-bikes/scooters. k) Look to using sensor-based LED lighting to reduce energy use. ***Recommendations*** ***1. Develop a sustainability strategy noting the commentary provided above.***
Principle 6 **Amenity**		*Good design optimises internal and external amenity for occupants, visitors and neighbours, providing environments that are comfortable, productive and healthy.*
Comments and Recommendation		**Strengths** a) The provision of communal facilities is positive. b) The extent of landscaped areas is promising. c) The master plan suggests some consideration of shade and shelter. d) The accommodation bathrooms are relatively generous compared to other facilities reviewed in recent years. **Areas for improvement** e) Optimise the provision and continuity of shade and shelter to pedestrian routes and facilities for universal access. f) Some of the bedrooms in the workers accommodation are still relatively small. g) Ensure there is rain protection over all entry doors. h) Review the car park to the rear of the grouped housing – flip the car bays to avoid having to cross the driveway and increase the width of the pedestrian path. i) Provide more architectural detail to help understand the level of solar protection to glazing and the capacity for natural ventilation. j) The potential for low-level eastern sun being reflected off the lower roof into the upper floor is a concern. k) Review the relationship between accommodation units and the recreational areas to reduce noise impacts. l) Identify locations for AC mechanical plant and other noise sources and ensure adequate screening. ***Recommendations*** ***1. Optimise the provision of shade and shelter to pedestrian routes, UA accessible facilities, and building entries.*** ***2. Review the configuration of the car parking to the rear of the grouped housing.*** ***3. Maximise the provision of shading to glazing and demonstrate through cross-sections.***

		4. Review potential glare issue at the first-floor level of the grouped housing. ***5. Review the locations of the landscape breakout areas to minimise nuisance and contribute to better legibility.*** ***6. Clarify locations for AC units and the provision of visual and acoustic mitigation.***
Principle 7 **Legibility**		*Good design results in buildings and places that are legible, with clear connections and easily identifiable elements to help people find their way around.*
Comments and Recommendation		**Strengths** a) The development is broadly legible with a simple layout and clearly defined functional zones. b) Whilst the radial pattern of the accommodation is not a logical response to the site geometry, it is legible. c) The clear distinction between front and back of house is positive. d) The car parking is, generally, easy to find, and the separation of staff parking in the back-of-house area is good. **Areas for improvement** e) The one-way loop is a convoluted way to serve the grouped housing. Having a separate access point from Stanley Street would be far more legible. f) Use landscape to help 'explain' the pedestrian network on site – eg different trees species for different routes, landscape treatments at path intersection, use of colours in the architecture, elements such as planters, outdoor furniture, etc. g) Provide more detail on how the main entrance is distinguished. h) Demonstrate how the development engages with the broader pedestrian network. i) Provide individual entries to the grouped housing from the street. j) Provide a clear, safe, shaded and appealing pedestrian path from the staff car park to the communal buildings. ***Recommendations*** ***1. Review the need for the one-way loop and consider exclusive access to the grouped housing from Stanley Street instead.*** ***2. Explore how to better use landscape to enhance pedestrian legibility.*** ***3. Provide more detail on the main entry experience – signage, landscape, etc.*** ***4. Include a pedestrian network diagram in and around the site.*** ***5. Clarify the provision of individual entries to the grouped housing from the street.*** ***6. Ensure clear, safe, and shaded pedestrian access from the staff car park.***
Principle 8 **Safety**		*Good design optimises safety and security, minimising the risk of personal harm and supporting safe behaviour and use.*
Comments and		**Strengths** a) No significant concerns.

Recommendation		b) Pedestrian/vehicle conflicts have been minimised. **Areas for improvement** c) Consider how to improve the mental wellbeing of the residents who are enduring the FIFO lifestyle – for example, ensuring a generosity to bedrooms, access to natural light, ventilation and outlook to landscape spaces, warmer tones for lighting, use of colour, seating and plants on the verandas, acoustic separation etc. d) Use materials and change in level to distinguish pedestrian crossing points. e) Test the master plan with swept paths for larger vehicles. f) Reduce the temptation for higher vehicle speeds on long straight roads g) Provide an overview of the lighting strategy. h) Clarify the extent of the secure area. i) Move pedestrian crossing locations away from the driveway bend at the southern end of the grouped housing. ***Recommendations*** ***1. Review the workers accommodation to raise the quality of life for the residents to mitigate against the mental stress of the FIFO lifestyle.*** ***2. Raise pedestrian crossings and distinguish through materials.*** ***3. Demonstrate safe functionality for large vehicles with swept path diagrams.*** ***4. Review the need for long straight roads or use devices to reduce ambient traffic speeds.*** ***5. Provide a high-level lighting strategy.*** ***6. Clarify the extent of the secure area.*** ***7. Review pedestrian crossing location sightlines.***
Principle 9 **Community**		*Good design responds to local community needs as well as the wider social context, providing environments that support a diverse range of people and facilitate social interaction.*
Comments and Recommendation		**Strengths** a) The provision of workers accommodation within the community, as opposed to being isolated, is good and helps to better embed the transient workforce in the community. b) The inclusion of communal facilities is good. c) The prominence of landscape in the layout is positive. d) The separation between transient single workers and permanent family-orientated housing is appropriately managed. e) The intent to include public art is positive. **Areas for improvement** f) Provide more detail on the intent for public art and how, through engagement with the local community, it can help establish a connection to country, noting that a mural on an end wall us underwhelming and appears as an afterthought. Also, explore whether is an opportunity to link public art to the prominent water tower. g) Make the convenience store available to the broader community to help

		support its viability and engender social interaction. ***Recommendations*** ***1. Provide more detail on the public art strategy.*** ***2. Clarify whether the convenience store will be available to the broader community.***

Principle 10 **Aesthetics**		*Good design is the product of a skilled, judicious design process that results in attractive and inviting buildings and places that engage the senses.*
Comments and Recommendation		**Strengths** a) Yet to be determined. **Areas for improvement** b) Provide more detail on the architecture of the built elements, materials, use of colour, etc. c) Develop an architectural response that is inspired by, and contributes to, the local sense of place. d) Explore how to imbue the workers accommodation with some of the design DNA of the communal facilities so they read as a whole and of a similar quality. e) Better articulate the ends of the grouped housing, rather than relying on murals for visual interest. f) Develop an architectural (and landscape) response that disassociates the development from the transient nature of the accommodation – i.e. a development that has a stronger sense of permanence. g) Provide details on signage where visible from the public realm. ***Recommendations*** ***1. Provide more details on materials on colours and materials and how they can respond to and enhance the local sense of place.*** ***2. Review the architectural treatment of the accommodation units so the aesthetic quality is raised to that of the communal buildings.*** ***3. Review the lack of articulation on the end walls of the grouped housing.*** ***4. Explore how, through the landscape and architecture, the develop can feel less transient.*** ***5. Provide more information on the signage strategy.***

Concluding comments

The Panel thanks the Applicant for presenting to the DRP early in the process. The Panel is broadly supportive of the overall intent and commends the Applicant for the intent to integrate this form of housing within the local community where it is accessible to a wide range of facilities, rather than being in a more remote location.

Being in an existing place, however, comes with a range of obligations to respond appropriately to the site interfaces, connects into the local movement network, and to develop an architecture that sits comfortably in its context where there is a stronger sense of permanence.

The Panel has offered extensive commentary in respect to the 10 design principles of SPP7 to help the project be the best version of itself that it can be. The Applicant is encouraged to take the comments on board and the Panel looks forward to reviewing the next iteration of the design.

Town of Port Hedland

Attachment 4: Schedule of Submissions – DAP REF: 2025/044

No	Received	Name	Summary of Comments	Officer Response	Applicant Response	Officer Recommendation
1	03/06/2025	Janet Gillingham	I am against this planning development.	Noted. No reasons provided	The submission should be given limited weight as no grounds have been provided.	No action.
2	03/06/2025	Debbie Galli	I oppose this development for Workforce Accommodation in residential areas.	Noted. No reasons provided	The submission should be given limited weight as no grounds have been provided.	No action.
3	03/06/2025	John Ashenden	This is another camp for temporary accommodation that is not needed in this town. There are more than enough camps to cover any temporary accommodation needs for FIFO workers. Permanent housing is a better solution for Port Hedland to the current accommodation crises.	There is no evidence provided to support the proposition of oversupply of temporary accommodation in the Town. The Town's Local Planning Policy permits the consideration and encourages high quality of accommodation by locating closer to urban area with social benefits for occupants, over the remote locations.	The proposal provides high-quality accommodation and communal facilities in an urban neighbourhood of South Hedland where existing service networks are available. The accommodation and communal facilities are sited within a landscape led design provides shade, visual relief and microclimate cooling. The nature of the accommodation provided is substantially different to and a significant improvement on low amenity remote mining camps. The proposal satisfies the Town's policy intent – Refer to Section 7.7.2 of the DA Report. Development approval is sought for dual land use purposes, workforce accommodation' and grouped dwellings. These land uses address both short term demand by contractors and key workers - Refer to Sections 3.6 and 4.1, letters of	A condition is recommended requiring lodgement of a subdivision application to WAPC facilitate future and permanent development outcome for the site.

No	Received	Name	Summary of Comments	Officer Response	Applicant Response	Officer Recommendation
					support from local contractors for additional short term accommodation, and *Appendix F - Market Context Statement*. The proposal also supports long term permanent residential use via the provision of townhouses. The landowner is committed to transitioning the balance of the site to long term permanent residential accommodation – Refer to Section 3.7. The provision of 15 townhouses as part of the development demonstrates this long term commitment. The short term worker accommodation use will help generate the funds to enable permanent residential development, within a prohibitive cost environment. Refer Executive Summary, Table 7 subclause (g), Sections 7.2.1.2, 7.2.3.2.	
5	05/06/2025	Donna Lockyer	I oppose this development of Workforce Accommodation in residential areas	Noted. No reasons provided	The submission should be given limited weight as no grounds have been provided.	No action.
6	05/06/2025	Ben Lockyer	I oppose this development of Workforce Accommodation in residential areas	Noted. No reasons provided	The submission should be given limited weight as no grounds have been provided.	No action.

35	03/06/2025	RFF Town Planning	1. No Structure Plan provided which is a	1. The Town has accepted the application on the basis that a portion of the development	1. Refer to Table 7 subclause (i) and Section 7.2.1.1 and clause 27 of the Deemed Provisions which	1. A condition has been applied to for a subdivision

No	Received	Name	Summary of Comments	Officer Response	Applicant Response	Officer Recommendation
			requirement of the Urban Development Zone.	is for a temporary use, with a portion for permanent 15 grouped dwellings. The applicant has identified the intention to transition to a residential development once the temporary use ceases, as outlined under the applicant's indicative development/subdivision master plan.	allows development to be approved without an endorsed LSP. The Deemed Provisions must be read as part of LPS7. A comprehensive DA submission was lodged. It includes a high level of analysis and detail commensurate with an LSP. The proposal will not prejudice the future development of the street block and is consistent with orderly and proper planning outcomes – refer to Figure 3 and Section 7.2.1.1 and 3.7. LPS 7 LSP provisions are superseded by the P&D Regulations – refer to Regulations: https://www.wa.gov.au/system/files/2021-07/PD-Practitioners-Frequently-Asked-Questions-updated-April-2021.pdf p23	application to be lodged confirming the development outcome for the property. The subdivision proposal will include supporting technical documents to justify the design.
			2. No information on subdivision of balance lot and integration with vacant land can be achieved.	2. Planning and Development (Local Planning Schemes) Regulations 2015 Deemed Provisions permit consideration of the development, outside of an established structure plan.	2. The survey strata subdivision of the townhouse component will be subject to a separate planning approval. Further information has been provided to the Town in support of the nominated density. Refer to Section 3.7 for information on future transition and interface with Lot 50 (proposed Community Hall and Church).	2. Action as per point 1 above.
			3. The layout, with the inclusion of services and amenities will not encourage integration with the community. Furthermore, the community are unable to	3. The application indicates various methods of community access to the site and facilities under the Social Impact Statement.	3. Refer to the discussion on capacity to share communal facilities with the local community above at Submission 1, Item 5 above. The proposal has been expressly designed to avoid replicating existing	3. A condition has been applied reaffirming requirement for social integration in the Social

No	Received	Name	Summary of Comments	Officer Response	Applicant Response	Officer Recommendation
			access these facilities. Form and density of development is more suited in the City Centre zone where there is an abundance of undeveloped land.		neighbourhood services, providing only necessary support services for the time-limited worker accommodation use and looks to exploit opportunities to provide training and employment local service providers, South Hedland High School and the TAFE students. Refer Section 3.1.	Impact Management Plan, to the satisfaction of the Town.
			4. Form and density more suited to City Centre zone.	4. The proposed form and density is relative to the ultimate zoning and built form. The zoning contemplated by the Town for this site is a combination of low and medium density housing. The proposed building form is considered compatible with the surrounding established building form of single and two storey dwellings and consistent with the future residential housing.	4. The development form is discussed at Sections 3.2, 3.5, 6 (DRP response) of the DA Report. The proposed form has a permanent residential built form interface to Stanley Street (townhouses) and time-limited accommodation units are provided in a landscaped setting with ancillary support facilities. The built form is appropriate to the workforce accommodation land use. Communal facilities are sited towards Kennedy Street, the site's public entrance, adjacent to existing hardstand and egress and access points. The proposal is not characteristic of a retail or commercial centre development – communal facilities are ancillary land uses and generally temporary.	4. No action.
			5. Scale of the development is likely to result in numerous unmanageable emissions, which, even though re-design is likely to	5. The submitter has not indicated how the development will adversely impact desired residential character of the area. The	5. Refer to Table 10 'movement network' p68, and Section 7.2.1.1 Development Response p54 of the DA Report. The Kennedy Road car parking area is	5. No action.

No	Received	Name	Summary of Comments	Officer Response	Applicant Response	Officer Recommendation
			adversely impacted the desired residential character of the area Unclear how form and style are responsive to location and surrounds. The design reflects standard format workforce accommodation.	development is generally consistent with residential land use of the area and the mix of uses with the TAFE campus on Parker Street and a 'Tourism' zone, caravan park accommodation on North Circular Road, all within 150m from the site.	screened by a 4m wide landscaped edge to the public road. No clarification / evidence has been provided in respect of emissions.	
			6. Inconsistent with LPS 7's and LSP identification of land for immediate residential development	6. The grouped dwellings that front Stanley Street are proposed to be immediate and permanent development that integrates with the eastern residential edge of the site. The indicative development / subdivision design can be progressed to formalising the future subdivision outcome.	6. Refer to Section 3.5 Built form response. Townhouses are oriented to Stanley Street to activate and integrate the site into the existing residential neighbourhood to the east. Townhouses are serviced via a rear laneway. Generous communal facilities are sited towards Kennedy Street, the site's public entrance, adjacent to existing hardstand, parking and egress and access points. This is the site's original and public entry point for future sharing of community space located around the Dining Hall and bus collection zone. Refer to SPP7.0 Response: The townhouses and communal facilities are designed with an external outlook with active courtyards and openings. These design features improve activity and passive surveillance of public spaces. Kennedy Street represents the site's public frontage and entry point for	6. No action.

No	Received	Name	Summary of Comments	Officer Response	Applicant Response	Officer Recommendation
					potential shared community space located around the Dining Hall and bus collection zone. Regarding Scheme Aims: LPS 7 Economic aims include (ii) *Encourage local economic development, employment and diversification opportunities; (iii) Effectively manage the supply and use of accommodation considering resource sector economic cycles.* Refer to point (3) above for economic development support and Submission 1 Point (5) and (6) for economic benefits and evidence of demand for worker accommodation. Refer to Section 4.1 and Appendix F for the Market Context Report and letters from contractors in support of additional accommodation resources. With respect to the built environment scheme aims, the townhouses and Administration building, drainage basin, streetscape and boundary planting representing long term insitu development elements. Modular housing construction should not, when compared to traditional housing construction methods, translate as transient particularly in a housing affordability crisis and high construction costs.	

No	Received	Name	Summary of Comments	Officer Response	Applicant Response	Officer Recommendation
					In response to DRP comments – refer Table 6 'Aesthetics' further articulation was added to the townhouse end walls, and pedestrian entries from Stanley Street. More variation to the materials, colours and finishes were added to the accommodation units along with architectural elements (screening). Three bedroom townhouses each with private ensuite are designed to be able to cater for a range of future occupant accommodation needs; both short and long term. The proposal does not include institutional architectural references. The scale and density represent a boutique scale compared to common workforce accommodation projects and typical townhouse residential development. Refer to point 1 above and Section 7 of DA Report which demonstrates the proposal meets the intent of the Urban Development Zone. LPS 7 does not indicate the land will used for immediate residential development. It anticipates the site will host a range of residential densities and typologies as well as commercial and other non-residential uses normally associated with and consistent	

No	Received	Name	Summary of Comments	Officer Response	Applicant Response	Officer Recommendation
					with residential areas. It requires a connected movement network. The proposal meets these objectives. The suggestion that the proposal is inconsistent with LPS 7 is incorrect. The proposal meets the objectives of the Local Planning Strategy – Refer Section 7.2.3.2 of the DA Report. The LSP refers to the desired timeframe for residential development which the provision of permanent townhouses meets. The proposal has active pedestrian access and permeable 1.2m slat fencing along Stanley Street. Pedestrian and vehicle access is provided along Kennedy Street. Permeable 1.8m high wire mesh fencing behind a 4m wide landscape strip is proposed to Kennedy Street. The site only has two street interfaces. It is otherwise appropriate for the site to be fenced along other rear and side boundaries as proposed (1.8m mesh fencing to north, east and west). The activated street frontages as proposed will significantly improve the existing streetscape	

No	Received	Name	Summary of Comments	Officer Response	Applicant Response	Officer Recommendation
					character and activate Stanley and Kennedy Streets. The communal facilities provided for the workforce accommodation is appropriate to the use proposed. A future application for permanent development will be required to have due regard to the LSP as it relates to open space, community facilities, housing typology and affordability objectives etc. The proposal also addresses financial challenges affecting the construction of permanent residential development; 60% 100% increase on Perth prices – refer to Appendix F section 2.1. It is noted this site has remained vacant and underdeveloped for approx. 9 years and the proposal provides a reasonable pathway to achieve the ultimate LSP objective. A 10 year approval is sought – not 20 years. The future transition to permanent residential is addressed in the DA Report - Refer to Sections 3.6 Land use approach and 3.7 Transition. A time-limited approval is sought for the workforce accommodation proponent. This represents an inherent control over the operation of the land use	

No	Received	Name	Summary of Comments	Officer Response	Applicant Response	Officer Recommendation
					– an agreement is not needed. The townhouses are additionally proposed as Grouped Dwellings allowing for permanent residential use consistent with the typology and affordability objectives. The proposal is supported by a detailed SIA. The suggestion that the proposal is inconsistent with the LSP is incorrect.	
			7. Design of accommodation is at odds with LPP5 - Workforce Accommodation e.g. none of the units have an external window to a street frontage, proposal lacks diversity in dwelling types, insufficient unit sizes and floor-to-ceiling heights.	7. The design proposes 15 two storey grouped dwellings presenting directly to Stanley Street. Also, community buildings presenting windows next to recreation facilities (outdoor sports court and gym) to Kennedy Street frontage behind a car park. The accommodation buildings are located behind these buildings and do not present to the street but has been accepted. The existing car parking area to Kennedy Street frontage is proposed to be resurfaced, saving costs and reducing material wastage. The car parking area has been identified with potential for events with the community interaction with the workforce accommodation use,	7. LPP5 cannot be inflexibly applied. Other than minor non compliances, the accommodation units design satisfies LPP5. Refer to Section 7.2.2.3 and Table 10 which provides an assessment against Table 2 of LPP5. None of the units front public streets but have activated frontages to the internal pedestrian pathway network. Refer to the application plans Appendix B of the DA Report. Communal facilities appropriate to the temporary land use are proposed. Communal facilities and townhouses do interface with public roads have active openings. Multiple points of ingress and egress for vehicles and pedestrians on both Stanley and Kennedy Streets. There are economic and social opportunities for the community to be involved in the worker accommodation proposal. It is incorrect to	7. A condition is applied requiring room dimensions, sizes and ceiling heights be amended, to the Town's satisfaction.

No	Received	Name	Summary of Comments	Officer Response	Applicant Response	Officer Recommendation
				The design provides sufficient grounds for support, presenting a standard urban front with buildings facing Kennedy Street. There are no buildings with their 'backs' turned to the street.	conclude the proposal is insular or does not integrate with the community. The proposed development provides a total of 79 units (15 townhouses and 64 modular accommodation units including 2 accessible units). The townhouses and accessible units the account for 21% of the total accommodation offer. The workforce accommodation use applies over the entire site including the townhouses to ensure they can be used with maximum flexibility and more than short stay purposes. Minor variations to unit sizes and floor-to-ceiling heights are discussed at Section 8.1. LPP5 variations are relatively minor, not anticipated to materially impact workers staying at the facility on a short term basis and a balance of open spaces (internal e.g. balconies and courtyard) and external (landscaped gardens and recreation facilities) have been provided in support internal dwelling spaces. An Operational Management Plan is recommended as a development condition to mitigate potential amenity (lighting/car park) impacts e.g. cars will be required to reverse park to minimise noise when occupants leave early for work.	

No	Received	Name	Summary of Comments	Officer Response	Applicant Response	Officer Recommendation
					Care has been taken to screen Back of House facilities from existing residential areas – Refer Section 3.5, Table 7 subclause (n), Section 7.2.1.1, Table 10. The townhouses have a total area of 115.88m^2. Each standard accommodation module has a floor area of 63m^2. The accessible units containing 2x rooms have a floor area of 115.2m^2 and complies. Townhouse living rooms have a minimum dimension of 4.3m and an area of 18.55m^2 and exceed the minimum requirement.	
			8. No justification offered as to the industry specific needs of an industry or project for the development.	8. The applicant has demonstrated a need for the workforce accommodation facility, providing letters of support from potential clients.	8. Refer to point (8) and Sections 2.1, 2.3, 3, and 4.1, Table 3 and Appendix F for the Market Context Report and letters from contractors in support of additional accommodation resources.	8. No action.
			9. Proposal will place demands on local emergency and medical services.	9. As urban areas evolve and expand there will always be an increased demand for services and facilities. Agencies in charge of such services would be responsible for planning to meet increases in demand.	9. An internal one-way loop road provides access to the townhouses and minimises increased traffic volumes on Stanley Street. The loop road also facilities access for emergency vehicles and security patrols and surveillance to the extremities of the site. The future development of the Urban Development Zone is expected, dependent on densities, to generate in the order of 140	9. No action.

Commented [KD1]: List actions taken - including any additional conditions added to address concerns.

No	Received	Name	Summary of Comments	Officer Response	Applicant Response	Officer Recommendation
					(@R20) and 180 (@R40) permanent dwellings. Medical and emergency service capability would be expected to cater for growth in line with the long term realisation of the LSP. Figure 3 shows the future development site could yield 15 survey strata townhouse lots, 37 green title lots and approx. 15 additional strata lots (67 permanent lots) and indicatively 22 lots on the Horizon owned land Lot 2940. This is well within the dwelling yield range anticipated for the Urban Development Zoned street block. SIA - The proposal seeks time-limited development approval for 10 years. 18 x employees are expected to service the development with a preference for local procurement. First-aid facilities will be provided onsite for the temporary land use. The number of temporary occupants at 297 is lower than the ultimate permanent population that could be accommodated on the site - approx. 378 residents (based on R20 density and average household of 2.7 persons.	
			10. Draft Housing Strategy to be imminently released.	10. The timing of the Draft Housing Strategy is not grounds for consideration.	10. Draft Housing Strategy – it is inappropriate to defer determination of the proposal on account of an imminent housing strategy.	10. No action.
			11. TIS - underestimates likely vehicle usage.	11. The Town requested further information on matters of	11. No evidence provided in support of allegation on TIS. Refer to the	11. A condition has been

No	Received	Name	Summary of Comments	Officer Response	Applicant Response	Officer Recommendation
			provided to adequately demonstrate visual bulk, shadowing, scale and the development's realistic appearance from the public realm.	realm. The site has a fall from east to west of 4 metres. The development is mostly single storey accommodation buildings with community style buildings setback approx. 30 metres to Kennedy Street. There are no overshadowing impacts.	individual components. A range of internal and external perspectives, site and floor plans, elevations and cross sections are provided. These plans appropriately indicate the scale of the proposal relative to the existing neighbourhood. The proposal is generally single storey with two storey townhouses and single storey communal facilities.	
			15. SIA - Limited information on methods of engagement and community engagement outcomes.	15. There has been sufficient information provided in the SIA on engagement.	15. Refer above to Submission 1 subclause (4) regarding consultation.	

36	03/06/2025	DWER (Rory Hunter)	1. Urban Water Management Plan (UWMP) and Sewerage Policy 1.1 The Department is not aware of an overarching District Water Management Strategy (DWMS) or a Local Water Management Strategy (LWMS) that covers Lot 51. 1.2 In the absence of a water strategy, the proponent has submitted a preliminary Urban Water Management Plan (UWMP) to consider the water environment and to ensure the development poses no increase in risk to surrounding land and property. 1.3 Water supply and sewerage arrangements have been agreed with Water Corporation. The stormwater management must be agreed with the Town of Port Hedland to ensure stormwater is managed appropriately, and flood risk adjacent and downstream of the site is not increased. 1.4 The proponent provides several potential measures to reduce water use by the	Noted. 1.1 The Town does not have a District Water Management Strategy (DWMS) or a Local Water Management Strategy (LWMS) for the locality. 1.2 The Town's Engineering Services are satisfied with the levels proposed and that the majority of the drainage from the site will be overland through Kennedy St. There are no open drains in his section of the Town. 1.3 Noted- The Town will recommend a condition requiring for preparation of a final UWMP for approval by the Town/DWER prior to issue of a building permit. 1.4 Noted. As per 1.3 above.	A preliminary LWMS was prepared in support of the DA – Refer to Appendix J and attached updated UWMP information. Please note the basin level has been dropped to 9.8m and habitable floor levels are proposed to be minimum of 10.60m. A detailed response to the Town's Engineering internal referral has been provided including revised civil drawings showing spot height levels for FFL and asphalt car park area, as well as existing levels to tie into Kennedy Street. The proponent will accept a condition of development approval that requires the preparation of a final UWMP in accordance with the Town to be approved by the Town prior to the grant of a building permit.	

			development. The final version of the UWMP should clarify which measures are possible and how they will be implemented. 1.5 The UWMP has considered the design standards for water management however does not describe how climate change has been considered in the modelling. This should be included in the final UWMP at the detailed design stage. 1.6 Section 9 of the UWMP refers to roles and responsibilities for implementation. The final UWMP must fully consider the construction stage to ensure the appropriate management of runoff until the drainage system is complete.	1.5 Noted. As per 1.3 above. 1.6 Noted. As per 1.3 above.		
			2.0 Flood risk (Storm surge). 2.1 The Department of Water and Environmental Regulation provides advice and recommends guidelines for development on floodplains with the object of minimising flood risk and damage. 2.2 The Port Hedland Coastal Vulnerability	2.1 Noted. No Comment 2.2 Noted. The Applicant has advised FFL for the habitable		

			Study (Cardno, 2011) and South Hedland Flood study (GHD, 2011) show the general area is affected by shallow overland flooding during major events with the 1 in 100 (1%) AEP flood level expected to be about 10.0 m AHD (refer to attached map).	buildings are a minimum of 10.6AHD.		
			2.3 Based on our floodplain management strategy for the area, proposed development (i.e., filling, building, etc) on the Lot is considered acceptable with respect to major flooding. However, a minimum habitable floor level of 0.5 metres above the adjacent 1 in 100 (1%) AEP flood level (ie., 10.5 m AHD) is recommended to ensure adequate flood protection.	2.3 Noted. As per 2.2 above.		
			2.4 The available contour information shows that the general surface elevation of the Lot is between 10.0 m AHD and 14.5 m AHD.	2.4 Noted. No comment.		
			2.5 This advice is related to major flooding only and other planning issues, such as stormwater drainage and environmental and ecological considerations, may	2.5 Noted. On site stormwater is being considered separately. The applicant will be requested to liaise with DWER to understand what level of environmental and ecological consideration are		

			also need to be addressed.	required as part of the Final UWMP.		
			3.0 Native Vegetation			
			3.1 Under section 51C of the Environmental Protection Act 1986 (EP Act), clearing of native vegetation is an offence unless: • it is undertaken under the authority of a clearing permit. • it is done after the person has received notice under Section 51DA(5) that a clearing permit is not required. • the clearing is subject to an exemption.	3.1 Noted. No comment.		
			3.2 Exemptions for clearing that are a requirement of written law, or authorised under certain statutory processes, are contained in Schedule 6 of the EP Act. Exemptions for low impact routine land management practices outside of environmentally sensitive areas (ESAs) are contained in the Environmental Protection (Clearing of Native Vegetation) Regulations 2004.	3.2 Noted. Applicant has confirmed exemption obtained.		

			4.0 Water Licensing 4.1 The proposed activities occur within the proclaimed Pilbara groundwater and surface water areas and are subject to licensing requirements under the Rights in Water and Irrigation Act 1914 (RiWI). 4.2 If the proponent intends to use groundwater for any purpose, they will need to apply for a 5C licence to take water, and a 26D licence if new water supply bores are needed. 4.3 For any further licensing advice please contact our Water Licensing team on 9166 4100.	4.0 Noted. Points 4.1, 4.2, & 4.3 will be provided to applicant.		
			5.0 Summary 5.1 Thank you for the opportunity to comment on the proposal. The Department has no objection to the proposal however recommends the Urban Water Management Plan is updated to consider the comments above. 5.2 In the event there are modifications to the proposal that may have implications on aspects of environment	5.1 Noted. Updated UWMP required. 5.2 Noted. Environmental water management issue can be referred if necessary.		

			and/or water management, the Department should be notified to enable the implications to be assessed.			
37	06/06/2025	Telstra (Jason Burns)	1. Telstra Mobile network serving this area is currently near maximum capacity. We are concerned that the proposed development will add to this demand and likely push the network into congestion, particularly at peak times.	1. This is an operational issue for Telstra. Inadequate telecommunication service is not reasonable ground to deter the development.	The matters raised do not relate to the proposed development. Greater network planning should have been undertaken by the provider in line with planning for future residential development.	1.No action.
			2. In addition, the planned metal-clad nature of most of the buildings will create in-building coverage availability issues, in the development.	2. This issue is not relevant to the suitability of development. Most of the buildings constructed in Port and South Hedland consist of sheet metal cladding and steel framing due to the cyclone region building requirements.		2. No action.
			3. We have been searching for a new site location for this area since 2021 & have investigated many candidates including the Water Tank near Wrasse Crescent (which would have been an ideal location), without success.	3. This is an operational issue.		3. No action.
			4. Our application to the Water Corporation has been refused. We	4. Noted. Applicant has been advised.		4. Applicant has been advised of Telstra's request.

			formally request your assistance to find a suitable location for this facility in close proximity to the water tank, to meet the current and future network demand including the additional loading expected from this development. This facility requires around 10x10m area and access to communications fibre and AC power.			
38	6/06/2025	Tim Turner	My name is Mr. Tim Turner who has been a resident of South Hedland for 19years. I currently reside as a homeowner at [redacted] Kennedy Street, South Hedland, WA. I have lived on Kennedy Street for the past 10years. I have also been a former Deputy Mayor of the Town of Port Hedland Shire and a former Councillor having recently resigned after nearly 5years on Council, on the 4th February 2025. I believe I have the lived experience and professional insight to provide an accurate commentary regarding the suitability of this proposal. I would like to express my opposition to the proposed development on the following basis;			
			1. Misleading representation of Key Service Worker	1.The application form proposes use classes in accordance the	The development proposes mixed accommodation uses: a 10 year	1. No action.

			Accommodation. It is my belief the presentation of the "Mixed Use Development" is misleading and does not represent key service worker accommodation in a way understood by the general public.	Scheme's use class categories of 'Workforce Accommodation' and 'Grouped Dwellings'. The proposed development is clear from the details provided.	time-limited workforce accommodation use and Grouped Dwellings (15 Townhouses) The proposal is very transparent and offers an innovative temporal solution that is capable of meeting both short and longer term housing needs. It is inaccurate and misleading to categorise this development as a trojan horse. The housing will satisfy existing demand from contractors and a portion will be made available for key workers. The communal facilities will be accessible to all accommodation units. LPP5 restricts workforce accommodation locations to a maximum 30-minute travel time. The proposed development is locationally appropriate – it is located within the 30min drive boundary and in an established residential area in South Hedland, approximately 13.5km from Port Hedland. It is not on rural zoned land. Refer to *Appendix F - Market Context Statement* which demonstrates existing demand for workforce accommodation and challenges facing permanent residential development which the time-limited approval seeks to address. The proposal is a significant improvement of typical Pilbara	
			2. Whilst a diversified portfolio of accommodation is welcome and needed what is proposed in actuality is a minimum camp surrounded or co-located with other housing options. This proposal represents a "trojan horse" creating a dangerous precedent that will introduce for the first time introduce a mining camp into a built up a residential living area located in South Hedland. In my opinion labelling the proposal as a mixed-use development is a gross exaggeration and misrepresentation of the real intent and functionality of the proposal.	2.The site was previously used for a 'Workforce accommodation' use (camp), for BHP.	2. No action.
			3.The proposal to provide key service worker accommodation is incongruent with the volume of rooms, 297, and the associated amenities needed to support such as population including a	3. The density / volume of rooms and resident population proposed can be accommodated on site. The buildings not tradition houses except for the grouped housing dwellings, present an alternative form of housing	3. No action.

			dining hall, gym facilities, laundry facilities etc This is not a residential development but an attempt to install camp like facilities in a built-up residential area. The apparent support by the Town of Port Hedland administration represents, in my opinion, a sell-out of planning principles by a Council and administration who have failed to progress their own key worker housing strategy.	and opportunity all types of users including for service workers.	worker camp development and has been crafted to allow for community integration in its function. It provides a built form with a comparable scale to the surrounding residential neighbourhood and activates the surrounding streetscape with residential townhouses and communal facilities. The subject land that has been vacant for almost 10 years and the time limited workforce accommodation approval provides a means to transition it permanent residential in the long term. The proposal aims to work in partnership with local neighbours such as Hedland High School and North Regional TAFE Pundulmurra Campus to use opportunities for youth employment and student training in administration, hospitality, commercial cookery, construction, landscaping and maintenance areas. The development remains strongly focused on opportunities for local procurement. Communal facilities can be shared with the public and to support local businesses. There is opportunity to share: • The Dining hall • The surrounding landscaped areas and bus pick up zones for local events including food truck nights and other community	
			4.If this is supported by the State Government it will irrevocably change how industry and Council perceive and pursue town planning. It will herald a wave of industrial accommodation infill across wide expanses on unused land in residential areas. The proposal does not represent mix-use accommodation but an overtly ambitious industrial accommodation development planned to accommodate the next cycle of economic investment and industrial construction needed over the next 10years.	4. Future development proposals will be subject to the same level of scrutiny under the planning framework of the time.		4. No action.
			5. A development of this size in such close proximity to	5. The development is considered similar to a large,		5. No action.

			residential housing is incongruous with integrated town planning and represents a lazy local government solution to an accommodation crisis that grips our community. To underscore the size and volume of this development it will need to have maintenance facilities for 18 staff. I am not aware of any other residential mix use development, such as an Osprey Village, requiring 18 staff and it is clear this is meant for a camp facility.	grouped housing site, nursing home or retirement village in terms of built form. It would share similar commercial aspects with the latter two examples, commercial level of traffic, access to bus/taxi transport to and from site for residents, on site laundries or an offsite laundry service, large kitchens, shared community and recreation facilities. The quality of accommodation and functionally of course is different.	• The convenience store could also potentially be accessible to the general public. As guided by the SIA, ongoing engagement with the community will help determine the best way in which communal facilities can be shared with the community. Accommodation marketing and pricing strategy will be established in due course. Extensive stakeholder consultation was undertaken including with the TAFE, Hedland High School, contractor businesses with letters of support from contractors are attached at Appendix F. Significant attempts to engage the community were undertaken by the proponent including prior to lodgement and as part of the independent SIA process. The community information session was arranged by the proponent at considerable expense. Despite letters being dropped to over 180 dwellings, the lack of attendance by any residents, along with limited submissions during public advertising, suggests a degree of disengagement and apathy in the local community.	
			6. LACK OF SOCIAL BENEFIT The Town of Port Hedland planning team appear content to give support to the “potential” or “possible” benefits suggested by the developer with no hard assured guarantees for the future social benefits to the community. There should be no expectation this proposal will generate any social benefit in lieu of any other similar development. This is reinforced and underscored by the Town of Port Hedland, itself, who have stated there is no	6. The applicant has demonstrated opportunities for social interaction and benefit for occupants of the development and the community.		6. A condition has been applied to requiring refinements to social impact to consolidate the Social Impact Management Plan.

			pricing strategy accompanying the proposal.		Express efforts were made to engage members of the non profit sector. Limited engagement by the community at the information session The SIA makes several recommendations to achieve social benefits and the proponent is committed to undertaking these objectives. Refer to Submission 1 subclause (3). Refer to the update TIA in respect of traffic concerns.	
			7. How is it a proposal can be progressed that purports to advocate for accommodation for the non-mining service sector with such limited and negligible consultation with small business. There has not been an exhaustive effort to consult with business or with the non-profit sector. The engagement process has all but ignored local residents with no meaningful attempt to have consultations. A letter-drop and a one day consult, 4th March 2025, does not and should not constitute sufficient consultation. The fact the Town of Port Hedland has acknowledged little to no engagement with local residents once again is a damning indictment on what I consider lazy local government and a developer not willing to invest in it's community. It appears the Town of Port Hedland has given a free pass to the developer in wha	7. The applicant has demonstrated they provided a broad spectrum of opportunity engage/consult various stakeholders through the process but there was limited responses. The Town undertook public consultation in accordance with the Scheme and Planning Regulations requirements. Further details of the process are outlined in the consultation part of this report.		7. No action.

			t amounts to a tick-a-box exercise land grab. This is extraordinary for a $60M proposal and especially one that proposes to insert a camp facility in the middle of a residential area. As a former Deputy Mayor and Councillor I am acutely aware of the laborious consultations undertaken for much smaller initiatives and developments. I urge the panel to reject the proposal and request a much more detailed and extended consultation supported by an evidenced social impact commitment. Sadly, in my nearly 20year of lived experience, mining camps do not provide a positive social impact for community. This proposal in no way outlines how it will strengthen or support community. The area itself will be a gated village with it's own security. This by nature is exclusionary and will not invite or facilitate social inclusion or integration.
